

Paul Otellini on Intel's Commitment to Education

Welcome to the Intel® Teach Elements series of courses. Intel is pleased to provide this online course content at no charge to teachers, because we believe quality education is the foundation for opportunity and innovation.

An innovative, global economy needs young people capable of analyzing information, collaborating with others, and communicating their ideas using technology.

At Intel, we work with teachers to build education programs that combine best practices with the power of technology. Since 1999, the Intel Teach Program has helped 10 million educators in 70 countries to make learning more compelling and relevant through the use of technology.

You are joining a network of teachers in an innovative approach to better prepare students to compete in the global economy.

I believe that mastering innovation is essential for the jobs of the future, and your participation in the Intel Teach Program will create wonderful opportunities for your students, well beyond the classroom.

On behalf of Intel, I'd like to thank you for your participation and your dedication.

Paul Otellini

President and Chief Executive Officer,
