

Preparing Students for 21st Century Success

Advances in technology continue to transform how we live, work, play, and learn. To succeed in the 21st century, students must develop digital literacy skills including gathering information, generation of content, interactive problem solving, and creation of media. Technology plays a key role in equipping students with the skills necessary to succeed in the workforce and beyond. Intel® Learning Series is based on years of ethnographic and field research and is designed specifically for kids, teachers, and IT administrators to support 21st century learning. Built to advance education, Intel Learning Series enables more personalized and comprehensive eLearning solutions for students K-8.

- Over 3 million Intel-powered classmate PCs shipped to date
- Intel Learning Series benefits education and economies
- Complete solution that includes hardware, software, infrastructure, services, and training
- Research-based and localized for local needs

65+ Local OEMs

350+ Companies

60+ Countries

20+ Languages

The Intel Learning Series is a comprehensive education solution—bringing together high quality technology, digital content, teacher training, and support, to help schools implement successful 1:1 eLearning for students ages 5-12. Think of it as a customized package of industry-leading hardware, software, services, and support designed to work reliably together and delivered by local vendors to meet local needs. With the Intel Learning Series, governments and schools can choose the right mix of teaching and learning tools to meet their educational goals.

We are committed to working with innovative companies to develop and deliver the most powerful education computing platform on the market.

What Educators are Saying

"Watch a class of youngsters work with traditional laptops or desktops in a lab. Then watch them use classmate PCs. The experience is completely different. With classmate PCs, the level of engagement and interaction, both with their peers and their teachers, is instantly higher. Classmate PC makes me want to find the funding for 1:1. Suddenly, a computer is rugged, useful, and personal enough to make 1:1 truly compelling."

— Christopher Dawson, ZDNet Education writer; Technology Director, Athol-Roalston Regional School District, Athol, Massachusetts

"What's been great about having a computer on each kid's desk is that it's 'right now' learning. You can't do that with one or two PCs in the room."

— Greg Clarkson, Buckman Arts Magnet Elementary School, Portland, Oregon

"It has been amazing to see the turnaround in their attitude. In fact, during the second trimester, close to 20 out of my 26 students had perfect attendance. That is very unusual and a sign of how motivated they really are!"

— Chris Bradeen, 5th grade teacher, Cordova Villa Elementary School, Rancho Cordova, California

Intel® Learning Series

Technology is a vital tool for preparing students to thrive in a knowledge-driven economy, but using technology requires much more than simply putting computers in the classroom, it requires a solution. The Intel Learning Series brings together a strong ecosystem of PC manufacturers, operating system vendors, education service providers, content and software providers to deliver a complete, end-to-end education solution. At the heart of the Intel Learning Series is the Intel-powered classmate PC—a purpose-built netbook with full PC functionality, designed especially for students. The child-friendly design is robust and comes with many unique features such as a water resistant keyboard, and an easy-carry handle. The Learning Series software suite designed specifically for the classmate PC makes learning engaging, fosters efficient classrooms, and provides tools for smooth deployment and reduced TCO.

Motivates Students

Keeping kids engaged and excited about school can be challenging. Studies show that technology in the classroom can result in improved attendance, higher test scores, and better graduation rates. Intel Learning Series Solutions are specifically designed for young students to help them learn in ways that are more natural and fun. They support individual learning styles and paces, and the child-friendly design makes it easy for kids to feel like "it's mine."

Empowers Teachers

The Intel Learning Series gives teachers new resources to enhance their lessons by providing access to Internet, multimedia, and localized digital content to integrate into their existing curriculum. Collaboration and management software allows teachers to be more responsive to the moment-by-moment needs of their students, switching easily between individual, small group, and whole-class instruction. They can give individual attention to students who need it most while others can move ahead at their own pace. With a secure computing environment, child-safe operating system, and web filtering and monitoring features, teachers can focus on teaching.
