Special LAN Issue

Borland's award-winning software is the best Holiday present you can give yourself or anyone else

Any one of these Holiday presents could save your marriage, career, reputation and quite a few bucks.

When you give or get any one of these Holiday presents, every day's a Holiday, because you're giving or getting long-lasting software that's a lot more welcome to the Woman in your Life than vacuum cleaners, egg-beaters and ugly earrings. And the Man in your Life would rather have Turbo Prolog,* Reflex,* Reflex Workshop,* Turbo Pascal,* Turbo Lightning* or SideKick* than socks, ties and wrong-size shirts.

Turbo Prolog takes you by the hand into the brave new world of Artificial Intelligence

Artificial Intelligence is no substitute for the human brain (well, most human brains; you make your own list), but it is a fascinating new field, and we're leading it with our 5th-Generation Turbo Prolog. In fact, people are telling us that Turbo Prolog is "The most exciting product they've seen this year." So see it for yourself. Give it. Get it. You deserve it.

Turbo Pascal — PC World's 1986 World Class PC Award for programming

Give someone our Turbo Pascal "Jumbo Pack," but keep some of the precious pieces for yourself

There's so much in there—Turbo Pascal, Turbo Tutor,* Turbo Database,* Turbo Graphics,* Turbo GameWorks,* Turbo Editor*—you can probably give someone else one or two of them. (Just keep the ones you don't have already and make the rest thoughtful, really inexpensive presents for someone's Turbo Pascal library.)

Give them one, maybe two kinds of Holiday Reflex action!

Adam B. Green, InfoWorld's highly respected columnist, says "Everyone agrees Reflex is the best-looking database they've ever seen." Peter Norton of PC WEEK says, "The next generation of software has officially arrived." And now, with our brand-new Reflex Workshop, which includes 22 instant ways to run your business well, you can give someone both programs and just about guarantee them a Happy well-run New Year!

Turbo Lightning wins the 1986 World Class PC Award for "Most Promising Newcomer!"

Solve your gift-giving and spelling problems now with Turbo Lightning

While you use SideKick, Reflex, Lotus 1-2-3* and most popular programs, Turbo Lightning proffers as you write! If you misspell a word, Turbo Lightning will beep at you instantly, and suggest a correction for the word you just misspelled. Press one key, and the misspelled word is immediately replaced by the correct word. And if you're ever stuck for a word, Turbo Lightning's thesaurus is there with instant alternatives. Perfect gift for everyone who reads and writes!

**Attention SideKick users!
Your SideKick now has a sidekick!**

If you're going anywhere for the Holidays, you'll need a Traveling SideKick!

It's the electronic organizer for this electronic age—a professional binder, a software program and a report generator—a modern business tool that prints your ever-changing appointments in daily/weekly/monthly/yearly form. Your appointments, phone list, address list, meeting schedule, travel itinerary—even your mailing list—can be kept up-to-the-minute correct and with you! (SideKick Owners: All your files translate instantly to Traveling SideKick.) Traveling SideKick is electronic, so it's good for this year, next year and all the next years after that—it's not a dusty old diary that dies Dec. 31!

Borland's Instant Winner Game

Scratch this card now and you could *instantly* win 2 free round-trip airline tickets to Australia for the America's Cup Race!

\$10,000

First Prize (\$10,000 value!) includes accommodations for two in Perth, Australia during the final America's Cup races, which start January 31, 1987. See America win it back after our *only* loss in 134 years! There's more than one *instant winner* in Borland's Instant Winner Game, because you could win one of two new \$6,895 4-WD Suzuki Samurai convertibles, or a \$4,995 AST TurboLaser™ printer, or a \$4,499 Toshiba T3100,™ or a \$2,399 Toshiba T1100™ Plus, or a \$695 AST SixPakPremium™, or a \$69.95 Traveling SideKick,® or any one of hundreds of other Borland products—and at the very least a Borland Rebate Coupon, good for \$10 off any single product or \$15 off any bundled product offer!

\$6,895

Toshiba T3100,™ or a Plus, or a \$695

\$4,499

\$69.95

See Official Rules on the back of this card for details.

Don't delay! There will be a second-chance drawing for the trip if not claimed by 12/30/86. There's also a second-chance drawing for the two Suzukis if not claimed by 2/28/87. All rebate coupons are good for products purchased 9/5/86-3/31/87. Product prices shown are suggested list prices.

Rub the silver box to reveal whether you win a prize or get a rebate coupon. Then fill in the second-chance entry blank to the right.

**SCRATCH
'N WIN!**

Second-Chance Sweepstakes Entry!

We're running two Second-Chance Sweepstakes drawings to award the trip and cars. They will be won by someone—it *could be you!* Fill in the entry coupon and mail it now. Winners will be notified immediately, because the final America's Cup races start in Australia on January 31, 1987, and you'll have to pack in a hurry.

(You will need a valid passport and the ability to comprehend Australian versions of the English language.)

OFFICIAL RULES - BORLAND INSTANT WINNER GAME

1. NO PURCHASE NECESSARY: To participate, you may obtain a game card included into the October, November, December, or January issue of the following magazines: PC World, Byte, PC Tech Journal, PC Magazine. You may also obtain a game card by mailing a self-addressed, stamped envelope to: Borland International Game Card, P.O. Box 870, Wino, CT 06097 (Washington State residents send self-addressed envelope.) Limit one game card per stamped request. All requests must be received by January 15, 1987.

2. TO PLAY: Remove the roll-off area on the game card to reveal what prize or rebate offer you have obtained.

3. PRIZES/REBATES: Receive the roll-off area one of the following prizes may be received: Trip for Two to America's Cup Races or \$10,000 1986 Suzuki 4W Samurai Convertible or \$6,895 AST Turbo Laser; Teaklike 1100 Portable Computer; Teaklike 3100 Portable Computer; AST Supergraphics; AST Advantagegraphics; AST 230 Pac; AST Rampage; AST Rampage AT; Free Borland Product; or you may obtain the following rebate offer: \$10 rebate offer on any individual product or \$15 rebate offer on any single advertised Borland bundle (See rule #11 for prize details).

4. PRIZE CLAIMS: If you obtain one of the prizes stated on Rule #3, sign your full legal signature on the game card and send we certified mail (copy should be made for your records) along with your name and address to: Borland International Prize Claim, 198 Danbury Road, Wino, CT 06097. All prize claims must be received or postmarked by February 15, 1987 (See Rule #12 for Trip for Two to America's Cup exception).

5. REBATE CLAIMS: Rebate on good for products purchased from September 5, 1986 through March 31, 1987. The \$10 rebate is good for any individual Borland product and the \$15 rebate is good for any advertised Borland software bundle. To receive your rebate you must return your completed license agreement from the manual, the game card and dated proof of purchase to: Borland International, Game Card Bureau, 4545 Scots Valley Drive, Scots Valley, CA 95088. Upon receipt of the license agreement, game card and proof of purchase, Borland will send your check. Rebate is not valid with any other rebate or promotion offered directly from Borland.

6. VERIFICATION: All game materials are subject to verification. Game materials are void and will be rejected if not obtained through authorized, legitimate channels, and may be rejected if any part is reproduced, counterfeited, torn or altered in any way, or if materials contain printing, typographical, or mechanical errors. Decisions of the Redemption Center are final. Game pieces from any game other than the Borland Instant Winner Game may not be used in this game.

7. CONDITIONS OF PARTICIPATION: Manual submitted becomes the property of Borland International. The submission of game pieces is the sole responsibility of the individual seeking verification, who is solely responsible for lost, late, or misdirected mail. All taxes, registration and inspection fees are the sole responsibility of the verified winner. Winners may be required to execute an affidavit of eligibility and name and likeness publicity release. By participating in the game you accept and agree to be bound by these rules and the decision of the Official Redemption Center which will be final.

8. ELIGIBILITY: Participation is open solely to residents of the United States 18 years of age and over, except employees and agents of Borland International, service agencies, and individuals engaged in the development, production, or distribution of game materials. The Mavrit Group, Inc. and its immediate family or members of their households. Void in Vermont and where prohibited by law.

9. GAME SCHEDULE AND AWARD OF PRIZES: The Borland Instant Winner Game will commence on or about September 5, 1986 and on January 30, 1987. It will officially end, however, when all game pieces are distributed. Verified game pieces will be awarded within 90(90) days from the date of their receipt for verification at the Official Redemption Center. A major prize winner's list can be obtained by sending a stamped, self-addressed envelope to: Borland Instant Winner Games, Wino, P.O. Box 7088, Wino, CT 06097.

10. ODDS CHART: The odds of winning prizes are based upon obtaining the one (one) game piece among the applicable number of game pieces.

PRIZE	Qty.	Total Value	Odds of Winning
Trip for Two to America's Cup or \$10,000	1	\$ 10,000.00	1 in 6,458,000
Suzuki 4W Samurai Convertible JA or \$6,895	2	\$ 13,790.00	1 in 2,225,000
AST Turbo Laser	1	\$ 4,495.00	1 in 8,458,000
Teaklike Portable Computer	2	\$ 8,990.00	1 in 2,225,000
AST Memory Boards	25	\$ 15,025.00	1 in 258,200
Borland Products	1,000	\$149,300.00	1 in 6,458
OVERALL TOTAL	1,831	\$188,788.00	1 in 8,784

All remaining game cards will contain a \$10 rebate good on any individual Borland product or a \$15 rebate good toward any advertised Borland software bundle.

11. PRIZE DETAILS: Trip for Two to America's Cup Races (or \$10,000) will include coach seating round trip airfare on regularly scheduled commercial airline from San Francisco, California to Perth, Australia and up to two weeks hotel accommodations in Perth, Australia plus \$4,500 spending cash. Winners will be responsible for obtaining visas, passport, and all other travel documents. Trip does not include meals, taxes, excess baggage charges and other hotel charges. Minor must be accompanied by parent or legal guardian.

Suzuki 4W Samurai Convertible JA Standard Equipment Package (or \$6,895), verified winner will be responsible for all registration, insurance, and licensing fees. AST Turbo Laser, Teaklike Portable Computer Model # 71100; Teaklike Portable Computer Model # 3100; AST Memory Boards and Free Borland Products are non-substitutional except by expense due to product availability and all warranties and guarantees are subject to manufacturer's terms. All prizes are non-transferable. Winning consumer is responsible for all local, state and federal taxes.

12. SECOND CHANCE SWEEPSTAKES: There are two Second Chance Sweepstakes drawings scheduled to be conducted on October 31, 1986 and February 28, 1987. Random drawing from all entries received by December 30, 1986 will award trip for two to America's Cup Races (or \$10,000). Random drawing from all entries received by February 28, 1987 will award two (2) Suzuki 4W Samurai (or \$6,895) all remaining prizes that are unclaimed after February 15, 1987 will remain unclaimed. Send entry to: Second Chance Entry P.O. Box 870 Wino, CT 06097.

If you have any question concerning the Borland Instant Winner Game, call: 1-800-461-4471.

Programming
Standard

Turbo Pascal Programming!

New Mac Version
available!

\$10.00 Scratch 'n Win Rebate!

Turbo Pascal™ 3.0

"For the IBM PC, the benchmark Pascal compiler is undoubtedly Borland International's Turbo Pascal," says Gary Ray of PC Week. We and

more than 600,000 other people around the world think Mr. Ray got that right. Since launch, Turbo Pascal has become the de facto worldwide standard in high-speed Pascal compilers. Described by Jeff Magtammann of PC Magazine as the "Language deal of the century," Turbo Pascal is now an even better deal than that—because we've included the most popular options (BCD reals and 8087 support). What used

Turbo Pascal now includes
free 8087 support and BCD!

to cost \$124.95 is now only \$99.95! You now get a lot more for a lot less: the compiler, a completely integrated programming environment, and BCD reals and 8087 support—all for a suggested retail of only \$99.95. And with a Scratch 'n Win \$10.00 Rebate, you pay only \$89.95—which really is the "language deal of the century"! Minimum memory: 128K.

\$10.00 Scratch 'n Win Rebate!

Turbo Database Toolbox™

A perfect complement to Turbo Pascal, because it contains a complete library of Pascal procedures that allows you to

search and sort data and build powerful database applications. Having Turbo Database Toolbox means you don't have to re-invent the wheel each time you write a Turbo Pascal program. It comes with source code for a free sample database—right on disk. The database can be searched by key words or numbers. Update, add, or delete records as needed. Just compile it and it's ready to go to work for you. (Share Suite has

Build Your
Own Database
Applications!

more than
700 best
designs and
rigs in their

IBM and IBM PC are trademarks of International Business Machines Corporation. DESQview and SuperPak are trademarks of AST Research, Inc. All rights reserved.

Advantage Premium.TM AT Promise.

Now AST translates the power and speed of AT-class computers into increased productivity...delivering on the promise of advanced technology with expanded memory and multifunction features.

More Features. Advantage Premium offers up to 2 MB of expanded memory, two serial ports, a parallel port, a game port, AST's SuperPak[™] utilities, and DESQview[™] windowing/multitasking software.

Expanded Memory. With our enhanced Lotus[®]/Intel[®]/Microsoft[®] compatible expanded memory, you'll be able to run larger, expanded memory spreadsheet, database and integrated applications. And with this much memory you can even create huge RAM disks and print buffers.

In XENIX[®] and Unix[®] environments Advantage Premium's memory can be used as extended memory.

You'll Work Faster. Advantage Premium's flexible DESQview operating environment lets you organize up to nine of your current and new expanded applications in memory for faster, easier access.

With your applications in Advantage Premium's memory, you'll toggle from application to application, transfer data between programs, and execute multiple tasks at the same time. And you'll avoid time-consuming workflow interruptions like diskette changes and closing down one application to open another.

AST is The Standard. Buying from AST, the largest producer of PC enhancements, you're assured compatibility. Whether you have an IBM[®], Compaq[®] or other compatible system, you'll find AST provides the same high-quality service and support that have made us number one.

Take Delivery On The Promise. Visit an AST Authorized Dealer today and ask for Advantage Premium. For more information call our Product Information Center (714) 863-1480. Or send the coupon to AST Research, Inc., 2121 Alton Avenue, Irvine, CA 92714-4992.

COVER STORY

Connectivity: LANs and Beyond

Frank J. Derfler, Jr./A local area network is one of many ways of linking PCs to share data and equipment. PC Magazine begins its series on connectivity with an overview of what constitutes a local area network. 118

The Software Key to LANs

Frank J. Derfler, Jr./Behind every good local area network is a good networking software package. Learn what networking software is and how it works so you can make an intelligent choice. 131

An Overview of Networking Options

Frank J. Derfler, Jr./Connectivity comprises far more than local area networks; it runs the gamut from swapping disks to mainframes and terminals. 141

Making Connections: LANs Under NetWare

Frank J. Derfler, Jr./As networking technology becomes increasingly complex, deciding which system to buy can be a daunting prospect. PC Magazine benchmark-tests and reviews Novell's NetWare networking software and evaluates six LANs running under NetWare: AT&T Information Systems' StarLAN, Gateway Communications' G/NET, Novell's NetWare/S-Net, Proteon's ProNET-10, Standard Microsystems Corp.'s ARCnet, and Texas Instruments' Business-Pro LAN Server. 149

A Networking Tool Kit

Frank J. Derfler, Jr., and Ed Halbert/LANs can be a pain to install and administer. These batch files make the job faster and easier. 191

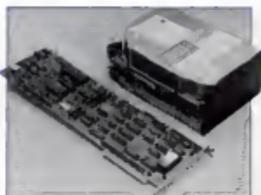

FEATURES

COMPUTERS

As Fast as an AT—or Faster
Joe Desposito/Why stop at 8 MHz when you can beat the speed limit imposed by IBM—and save money, too? Low-priced AT compatibles from Advanced Logic Research, Tech Personal Computers, and PC's Limited can do everything the IBM PC AT can do, and two of them can do it faster. 209

HARDWARE
Supercharging XT Hard Disk Performance

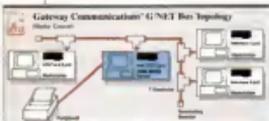

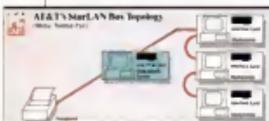

Winn L. Rosch/Don't put your old XT out to pasture just because its hard disk's access time is driving you nuts. Winn L. Rosch and PC Labs examined new hard disk and controller technologies and found that the right combination of hardware and know-how can give your XT hard disk a speed boost. 231

Supercharging XT performance with the Sygen Matched Pair hard disk, page 231.

WORD PROCESSING
Triple Crown: New Editions of Three Winning Word Processors

John Dickinson, Dara Pearlman, and Craig L. Stark/Improved versions of Volkswriter, XyWrite, and Microsoft Word are sure to delight die-hard fans and attract new audiences. 255

Six LANs running NetWare, page 149.

WHAT'S INSIDE

Frank J. Derfler, Jr.

At a recent seminar on local area networks, associate editor Cheryl J. Goldberg, who managed the cover story for this issue, queried consultants and microcomputer support people on why they wanted to learn about LANs. Many cited the traditional reasons for networking: equipment and data sharing.

But others said PC users at their companies keep hearing the buzzword *connectivity* at trade shows and seeing it in magazines, and they want it simply because it's the hot new technology. After 3 years of false starts, the Year of the LAN has arrived; only now micro-to-mainframe links come under the catchphrase "connectivity." According to *Future Computing*, nearly a million network interface cards were sold in 1986, more than twice as many as in 1985. Driving the hardware sales spurt are the Sytek/IBM NETBIOS and DOS 3.1 file- and record-locking standards, which have allowed software developers to design LAN applications, and new gateways that hook LANs to mainframes.

Unfortunately, networking is a complex subject to understand, and LANs can be surly products to use. This issue inaugurates *PC Magazine's* intensified coverage of connectivity with a primer on LANs and reviews of a half-dozen of them. "Connectivity: LANs and Beyond" (page 118) introduces you to the components of a LAN. "The Software Key to LANs" (page 131) explains what networking software does and how it provides the features a user sees. For a broader view of connectivity, you'll find a discussion of networking options, ranging from disk swapping to simple circuit-switching systems to LANs and minis and mainframes in "An Overview of Networking Options" (page 141).

Power users ready to make a LAN decision can consider the reviews and benchmark tests of Novell's *NetWare* and six LANs running under *NetWare* in "Making Connections: LANs Under *NetWare*" (page 149). "A Networking Tool Kit" on page 191 lists batch files to make a network administrator's job easier.

Since so much can go wrong when evaluating a LAN, PC Labs chose to take the time to do the testing right. Rather than cramming reviews of every LAN into one issue, we will review them in a series that will continue for most of 1987. The series will also cover other options, such as micro-to-mainframe links and gateway connections. To ensure continuity, we're using the same test-bed of equipment for each review and have brought in our connectivity guru, contributing editor Frank J. Derfler, Jr., (pictured above) and his team of assistants to perform all the testing. Derfler lectures, writes, and consults extensively on issues of connectivity for both the government and the private sector.

INTRODUCING THE A★STAR II™

We're having a party! It's a going away party. And, it's for IBM. But, shhhhh! Don't tell them. We want it to be a surprise!

Why a party? Well, it's because we've been told that more than a few of IBM's customers have been "going away" ever since we introduced our A★Star™ PC/AT compatible micro-computer. Now that we've announced our new A★Star II, we figure a lot more of their customers will be going away. That's because the A★Star II is the *only* "network ready" PC/AT compatible that can operate at 6, 8, 10 and 12 MHz. And because it's available in a super selection of models starting at only \$995!

The A★Star II is not just another clone, it's better...*much* better! Not only is it faster and more powerful

than IBM's model, it's also incredibly less expensive. Better yet, the A★Star II is built and backed by Wells American - a company that's been making micro-computers *longer* than IBM. (We bet that surprises even you!) Plus, the A★Star II is serviced nationwide by RCA Corporation - one of the world's largest and most respected consumer electronics firms. And if that's not enough, every unit includes free schematics and a money back guarantee!

If you'd like to be a part of our IBM going away party, clip and return the coupon or call us at the number below. But don't tell IBM! If they find out how many of their customers are going away, they might just go away themselves! Of course, that would be okay with us. We never really invited them anyway!

A PC/AT FOR ONLY \$995! WHAT A REASON TO CELEBRATE!

Special Introductory Offer: Order now and receive a \$395 option - absolutely FREE! Limit one per customer. Hurry! This offer and quantities are limited.

The Launch Of Our New Flagship:

Customizable, Expandable, and Responsive CROSSTALK® Mk. 4.

It takes a powerful, flexible PC communications program to cut through the sea of incompatible systems you face today.

CROSSTALK® Mk. 4 has what it takes. More protocols — X-PC, Xmodem, Kermit, and our own CROSSTALK. More terminal emulations, including complete IBM 3101, DEC

VT-100, and TeleVideo 900 series. Concurrent communications capability — up to 15 sessions. Error

checking at high speeds. Beginners can use the simple menus, a clear help system, and prepared

script files that help extract data from many popular information utilities. Experts can use

the powerful command programming language to create extensive, customized

"scripts." A unique modular architecture means we can quickly add new

capabilities by phone. So

CROSSTALK Mk. 4 may be the launch of more than just today's

standard in PC communications. It's probably tomorrow's as well.

CROSSTALK

Over 5 Years.
More Than 2,000,000 Times.
AST Has Increased
The Power Of The PC.
Now Out Of This Experience
Emerges A Powerful And
Versatile Personal Computer.
Built On Proven Technology.
Enhanced Like No Other.

Announcing
AST Premium/286™

Discover AST Premium/286. The First AST Quality, Uncompromising AT[®]

More than two million people have made us the first choice in PC Enhancement. For over five years, AST has been enhancing PC power and performance. Making multifunction board history with SixPakPlus[®]. Leading with PC to IBM[®] minicomputer and mainframe connections. Applying our expertise to PC graphics, local area networking and advanced memory expansion. And peripherals such as laser printers, scanners and disk subsystems.

Introducing the ultimate enhancement: AST Premium/286. The first AT-compatible personal computer with AST performance and reliability. Built on proven technology. More flexible and upgradeable. Skillfully combining increased processing speed and unparalleled compatibility—beyond other computers, even those with faster clock rates.

AST FASTslots[™]: Processing speedways. Forming the foundation of the AST Premium/286's increased speed are our exclusive FASTslots. This advanced architecture improves overall performance so there's enough built-in power to satisfy even the most demanding user.

The AST Premium/286 operates 50% faster than an 8MHz PC AT[®] as measured by the Norton Utilities[™] Version 3.0 SysInfo. And maintains full compatibility with standard PC and AT-based enhancement cards. It also provides for a powerful, easily upgradeable and expandable future, accommodating the next generation of accelerator

and high-performance enhancement cards.

A heritage of software compatibility. Software compatibility has always been one of our strong points. Shipped with the industry-standard MS-DOS[®] 3.1, AST Premium/286 is compatible with widely accepted operating systems such as IBM PC-DOS[™], Concurrent DOS[™] and XENIX[®]. It's also designed to get the most out of multitasking software packages like Microsoft[®] Windows, DESQview[™] and TopView[™].

Applications-oriented. Keyboard-selectable operation at 10, 8 or 6 MHz means virtually all popular off-the-shelf IBM PC and PC AT application software is immediately compatible. All your favorites, including Microsoft

Prices Start
At \$1995.00*

Personal Computer With Legendary Compatibility and Lightning Speed.

Word, Lotus® 1-2-3® Framework™, Symphony® dBASE® III and AutoCAD™

Attain your fullest software potential. AST's advanced architecture also provides faster and more flexible memory addressing. While built-in Enhanced expanded memory capabilities—AST FASTRAM™, expandable to 2MB in a single slot—let you break the 640K DOS barrier. Create bigger spreadsheets and sort larger databases. And enjoy the uninterrupted workflow benefits of multitasking using current DOS versions, with full support for protected mode software built-in.

Fast access disk storage. Complementing AST Premium/286's speedy

operation is a full line of disk systems. There's a 20MB, 40MB and a 70MB hard disk. Both the 40MB and the 70MB offer more storage and faster access times—below 30msec—than the PC AT's fixed disk. And our external disk/tape systems, featuring advanced SCSI architecture, allow easy expandability for up to Gigabytes of storage.

More standards are standard. We build-in our AST FASTRAM memory card. And most models include our own multimode enhanced graphics adapter, supporting IBM EGA, CGA and Monochrome, and Hercules Graphics Card™ display modes.

Compatible with AST and IBM Products. AST Premium/286 is designed to remain your productiv-

ity partner for years to come. Choose it with confidence for single and multitasking applications, individual and shared environments alike. Use it as an engine with other AST products to form powerful application workstations for desktop publishing, CAD/CAE and more. Or to increase connectivity use it as a network file server, to communicate with IBM mainframes and minicomputers, or to manage multi-user environments.

And all this increased power, speed, compatibility, quality and reliability is extremely cost competitive.

AST RESEARCH INC.

Seven industry-standard expansion slots; 1 PC, AT-compatible slot; 6 PC, AT-compatible slots, including two AST FASTRAM. FASTRAM provide no wait state operation with a high-speed direct interface to the 10MHz 80286 processor. Advanced architecture accommodates the next generation of accelerator and high-performance enhancement cards. It's also an open architecture for easy development and system integration.

Based on industry-standard native 80286 technology, complemented by AST advanced architecture

Coprocessor socket accepts 80287 devices to execute math- and floating point-intensive programs faster.

Two AT-compatible expansion slots with a plus, a third bus connector featuring lightning-quick CPU access time, for use with specially-designed cards like the AST FASTRAM Enhanced memory card. Expandable to 2MB in single slot, FASTRAM supports a variety of addressing capabilities—enhanced EMS, EMS extended (protected mode) and conventional memory addressing.

Enhanced, low-profile 101/102-key keyboard with separate numeric keypad, dedicated cursor control and extra function keys. International versions available.

AST Premium 286 is shipped with MS-DOS and GW BASIC® and is fully compatible with a wide variety of operating systems, operating environment and utility packages, and application software.

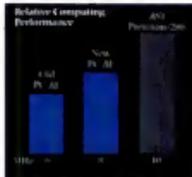

Indicators let you check your clock speed—user-selectable at 10, 6 or 4MHz. Reset button allows easy cold-booting. Security lock prevents unauthorized keyboard access.

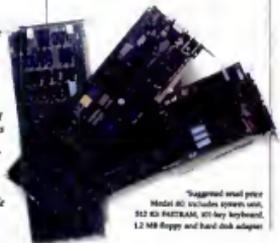

"The Perfect 10"

10MHz, 0 wait-state operation, faster than the 8MHz PC AT, with IBM PC AT hardware and software compatibility.

Supports standard PC, PC, AT and AST FASTRAM cards. With AST, you start with a lot, like our included FASTRAM Enhanced memory card and multimode Enhanced Graphics Adapter but you've also got a lot of options. We offer the widest range of compatible enhancement products and peripherals to suit your needs—a true one-stop solution allowing you to expand and upgrade your system with the assurance of future service and support.

Compare the increased speed of the AST Premium/286 against the top competitors for yourself! (Source: Norton Utilities SysInfo Version 3.0)

*Suggested retail price Model 80 includes system unit, 512 KB FASTRAM, 80-key keyboard, 1.2 MB floppy and hard disk adapters.

AST Premium/286. Complete Personal Computing

Solution #1: AST Premium Publisher™

Premium desktop publishing. The AST Premium Publisher is the first integrated desktop publishing hardware environment that's compatible with the IBM-oriented business world. It combines a fully-loaded AST Premium/286 with advanced systems components like the AST TurboLaser™ printer and the AST TurboScan™ image scanner for a powerful document handling system.

Compatible with industry-standard sophisticated page layout software, the Premium Publisher gives you the tools you need to prepare professional-looking presentations, newsletters, reports, business forms, complicated manuals and more, at your desk, in a moment's notice. And it's as easy to use as dedicated systems costing many times more.

With the AST TurboScan, color or black and white photographs, line art, handwriting, text and anything else that can be rendered on paper can be rendered in a matter of seconds for storage and editing on the AST Premium/286.

And when it's time to produce the master copy, AST TurboLaser produces a new standard in printing quality. Its high-speed, 300 DPI laser printing capabilities handle all your text and graphics output with ease.

AST markets products worldwide—in Europe call: 44 1 566 4390; in the Far East call: 852 0499 9113; in Canada call: (416) 886-7934. Powerful, Compatible, Solutions For Your Applications.

A powerful engine for application workstations. Now you can have all the luxury of a dedicated workstation, without the limitations. AST Premium/286's high compatibility level and AST's complete line of advanced, reliable products make it easy, convenient and cost-effective.

Solutions that are ready to go. We've pre-configured a number of workstation solutions tailored for maximum performance in your application. Combining our proven products, from local area networking and data communications to extra memory and I/O to laser printers and disk systems, our solutions are all designed to increase your business productivity.

Premium connections to mainframes and minicomputers. The resources of your IBM Mainframe or System 34/36/38 are at your fingertips. With our complete, pre-configured connectivity solutions you can combine the personal computing power of your AST Premium/286 with the power of your host computer. Our emulation and communications products make it possible for one, a cluster of five or a whole local area network to talk to your host via one host connection. As the leading emulation and communications solutions company, AST products always provide true emulation—familiar and fully IBM compatible.

Premium multiuser solutions. AST Premium/286's speed, flexibility and choice of peripherals make it a powerful host in a fast multiuser system. Ideal for small to medium-size

businesses and work groups, this configuration lets you save money by connecting other less powerful or simple terminals to the AST Premium/286. Compatible with XENIX and other UNIX™ multiuser operating systems, you can also effectively share printers like the AST TurboLaser. And any of AST's disk/tape systems.

Premium powered multitasking applications. Our built-in Enhanced expanded memory capabilities, breaking the 640Kb barrier, with the added functions of a multitasking/windowing software program, such as Microsoft Windows, DESQview or TopView, increase your productivity even more.

Organize several application programs, like Lotus 1-2-3, Microsoft Word and dBASE III, in AST Premium/286 memory for faster, easier access. Then view them simultaneously via window displays. Or toggle from application to application, transfer data between programs and execute multiple tasks at the same time. No more time consuming workflow interruptions like diskette changes and closing down one application to open another.

AST quality across the board, around the world. When you buy AST products you're also purchasing a worldwide reputation for service, support and product dependability.

Product reliability that begins with a financial strength of nearly \$180 million in sales and more than 800 employees throughout the world. And operations encompassing a quarter

of a million square feet of state-of-the-art manufacturing and corporate facilities. From Irvine, California to England, Hong Kong, Germany, France and Canada, this dedication results in a full line of highly reliable products garnering some of the lowest return rates in the industry.

At your service. AST Premium/286 is backed by a one year limited warranty and our worldwide network of certified dealers and service centers. Our technical support team is also available by telephone. And our product installation and operation manuals, recognized as some of the best in the industry, make using AST products as simple as possible.

The last thing you want from your modem is excitement.

Ven-Tel modems let you use your phone to exchange information with PCs anywhere in the world. We think that's pretty exciting.

Getting line hits, dropped connections and incompleting calls from your modem can be thrilling in its own way, too. But that's not the kind of excitement you need in business. And we go to great lengths to make sure you don't get it.

At Ven-Tel we've been making more reliable modems since 1974.

Ven-Tel modems put less stress on your PC because they have fewer components—70 vs. the 300 or so in other modems. And while other manufacturers may settle for random testing, every Ven-Tel modem must pass a 72 hour "burn-in" period—plus extensive testing on real phone lines.

As good as Ven-Tel modems are, we still back every one with a free *five-year* warranty.

No other major manufacturer even comes close.

So if you want a modem that won't add the wrong kind of excitement to your workday, you want Ven-Tel.

Ven-Tel
Modems

Our free 24-page booklet, "How To Select The Correct Modem," contains specific information about our full line of modems. To request your copy, call 800-538-5121. In California, call 408-727-5721.

LETTERS TO PC MAGAZINE

PUT IT ON THE MAP

In her review of PC mapping packages ("Putting Your Business on the Map," *PC Magazine*, Volume 5 Number 16), Carol Olsen Day states that *Map-Master* has files to map Louisiana by county. Louisiana, however, has no counties. As the result of a somewhat bizarre historical legacy, Louisiana's equivalent geopolitical units are called parishes. This easily made error, however, did not detract from Day's excellent and much-needed review in the least.

John E. Johnston III
Baton Rouge, Louisiana

MODIFYING PROGRAMS

I wish to express my appreciation for the excellent contributions your staff programmers and contributors are making in the Programming/Utilities, Power User, User-to-User, and PC Tutor sections of your magazine. I always turn to these sections first.

My greatest admiration goes to Charles Petzold, whose imaginative and original programs are particularly useful. The BROWSE, DDIR, DOS-EDIT, KEY-FAKE, SWEEP, and VTREE programs are all gems. I do, however, wish to point out a minor bug in BROWSE.COM (Programming/Utilities, *PC Magazine*, Volume 5 Number 6). Apparently, depending on the length of the file, the last PgDn that BROWSE.COM will accept may bring up a blank screen. This is not a serious matter when one realizes that the PgUp or Home key will bring the screen back to life again.

Nevertheless, it is a flaw in an otherwise perfect and extremely useful program. Can Mr. Petzold publish a patch?

N. W. Tschoege
Pasadena, California

The SETUP.COM utility featured in your Programming/Utilities column (*PC Magazine*, Volume 5 Number 12) is a magnificent and useful program—that one program alone is worth the price of an annual subscription to *PC Magazine*. Printer codes have always left me confused, and even when I do muddle through them, I quickly forget them if I don't use them for several days. Now, with SETUP.COM, I can forget about keeping all that information memorized.

However, I would like to modify SETUP, adding codes such as italics to the menu and removing some of the options already included with the utility. I must admit that, unfortunately, the explanation on how to modify it was a bit over my head. Is there any way I could get some simpler or more detailed instructions on how to modify SETUP?

Mike Caddell
Richardson, Texas

Everytime we publish a programming column, our readers deluge us with suggestions for expanding or modifying the features. Unfortunately, space limitations make it necessary for us to keep programs short, without fancy opening screens or long-winded error messages. While we can't meet each individual's specifications, we do include the assembly language source code with every utility to make it possible for programmers to customize the code. We also provide .COM files and text to explain how the programs

are constructed and how they operate. The utilities may not do everything our readers would like, but they are awfully powerful for such compact programs.—Ed.

ACCELERATOR BOARDS ARE A HIT

I would like to thank Charles Petzold and Stephen Davis for their excellent articles on accelerator boards ("Accelerator Boards: Power for a Price" and "The No-Slot Alternative to Acceleration (And Why It Makes Sense)," *PC Magazine*, Volume 5 Number 15).

Many users for whom it is not cost-effective to upgrade to a faster machine but who can afford to invest in an accelerator board would benefit from the articles. They clearly explain the differences in the various popular designs, as well as clearly compare (in words and graphs) the available products.

I would like to mention, however, a no-slot board that I think may be the best buy on the market—the PC-Sprint from EXEC-PC. The PC-Sprint plugs into the clock socket, runs at a maximum rate of 7.38 MHz, and provides a hard reset switch that can be externally mounted. All my software seems to run with it perfectly at the highest speed.

Rick Sidelnik
Austin, Texas

Thank you for your compliments. We are considering reviewing PC-Sprint in a future issue.—Ed.

You are to be commended for clarifying

Boost cursor speed. Stop cursor run-on.

With all the recent hoopla over performance, it's ironic that two of the PC's ergonomic deficiencies have been overlooked — its slow cursor, and the tendency of the cursor to remain in motion (run-on) after a cursor key has been released. Finally, the solution — Cruise Control™ from Revolution Software.

Cruise Control is a new productivity tool for serious PC users. It boosts cursor speed, typically by 3-5X. It eliminates annoying cursor run-on. And it adds hands-free cursor navigation to any application.

If you use 1-2-3, Symphony, dBASE, Reflex, or Paradox, you need Cruise Control's Anti-Skid Braking. Here's what the leader of one Lotus users group said about Cruise Control:

"Once I used it, I wanted it! Excellent idea. Very practical. One of the best programs ever sent to us for review!"

If you use Word Perfect, MS-Word, Q&A, DisplayWrite, MultiMate, WordStar 2000, Framework, PC-Write, or SideKick, you need Cruise Control's Screen Rammer, the high-performance, adjustable-speed cursor.

Cruise Control's namesake feature takes the drudgery out of paging through data base records, long documents, and large spreadsheets. It lets you repeat any key, hands-free — at the speed of your choice.

And there's more. A Chronometer "types" the time or date into your application at the current cursor position. The keyboard-controlled Screen Dimmer protects your privacy. The programmable Auto-Dimmer extends the life of your display screen.

Compatible with thousands of today's popular programs, including Lighting, SuperKey, and Ready!. Uses only 3K RAM. For DOS 2.0 or later. Not copy-protected. No risk, 60-day money-back guarantee.

Cruise Control™

Get a Grip on Assembly Language.

The award winning Visible Computer: 8088.

The Visible Computer is a book and software combination for mastering the elusive skills of assembly language. PC Tech Journal took one look and made it their September '85 "Program of the Month."

It's an animated simulation of the PC's microprocessor that lets you see with your own eyes how assembly language works. You'll be using it as a debugging tool for years to come.

It's a tutorial. A lot of people think the 350 page manual is the best book on assembly language ever written.

It's 45 demonstration programs you'll execute with the simulator, from simple register loads to advanced programs that manipulate interrupts and perform file I/O. And what you'll learn applies to all 86 family processors, including the 80186 and 80286. **\$79.95** not copy protected

The Visible Computer for IBM PC/XT/AT and true compatibles. If your dealer doesn't have it, order direct: Software Masters, 2714 Finleafes, Bryan, TX, 77801. (409) 822-9490. Please include \$3.00 shipping. Bank cards accepted.

the confusing subject of turbo boards for the IBM PC in "The No-Slot Alternative to Acceleration (And Why It Makes Sense)." As an XT user at home, I have always been frustrated by my computer's lethargic performance, but whether to upgrade to an AT or invest in one of these turbo devices had been a subject of great debate with my colleagues. After reading your article we installed MicroSpeed's Fast88 and have found working with the XT a bit more pleasant.

Richard Watanabe
Los Angeles, California

ALL CARD ALL WRONG

In the article "More Options for Enlarging the Dimensions of Memory" (PC Magazine, Volume 5 Number 11), Charles Petzold makes some serious errors, mostly by omission, and is grossly unfair and damag-

ing in his assessment of our product, the All Card. What I find totally baffling about the article is how anyone who understands, and expounds so meticulously on, the inner workings of extended memory with memory management units (MMUs) can be so casual about the shortcomings of expanded memory with bank-switching and about the phenomenal benefits of a well-designed MMU with today's versions of DOS. The result is that Mr. Petzold is misleading on some of the most important issues facing the buyer who hopes to go beyond 640K with a new memory expansion board.

The most important omission from the article is an acknowledgment that the All Card with its MMU provides extended memory that works with current versions of DOS. As a result, All Card users have the unique ability to upgrade their hardware features simply by getting a new version of software. Early users of the All Card can upgrade with software at no cost and run all the specs, including the Lotus/Intel/Mi-

Give Your Business A Merry Christmas and Have a Happy New Year!

1987 will be a very good year when you streamline your business with Dac-Easy Accounting. Now is the perfect time to give your business the gift it deserves and start the New Year right. Don't put off any longer the advantages of computerized accounting. At \$69.95, Dac-Easy Accounting is a superb value even Scrooge would love.

We've combined seven full-featured accounting modules in a single package including General Ledger, Accounts Payable, Accounts Receivable, Inventory, Purchasing, Billing and Forecasting. This is the software that the readers of PC World have voted as their favorite accounting package in the 1986 World Class Awards. Dac-Easy Accounting received more than five times as many votes as the second place finisher BPI — costing thousands of dollars more.

VALUE

Price plus tremendous performance means value, and the experts agree. InfoWorld has recognized Dac-Easy Accounting as 1986's "BEST SOFTWARE VALUE."

No other accounting package can match the explosive consumer base or the unanimous acclaim from industry experts. Dac-Easy Accounting is the perfect choice for your first accounting system or for upgrading from a single module system. Either way compare, and you will join over 150,000 people who are already having a happy New Year!

PERFORMANCE

Accurate information when you need it is what performance is all about. Fast, flexible reports

Holiday Savings of Over 40%

Give your business something it really needs this Christmas. Once you have automated your complete accounting and payroll process with the Dac-Easy Bonus Pack, you will always have the information you need at your fingertips. Just think, instant access to General Ledger, Accounts Payable, Accounts Receivable, Inventory, Purchasing, Billing, Forecasting, and Payroll. This is one gift that will keep on giving year after year.

Dac-Easy Bonus Pack includes five great software packages for a low \$149.95. That means a savings of over \$130. You receive Dac-Easy Accounting, Dac-Easy Payroll, Dac-Easy Accounting Tutor, and Dac-Easy Payroll Tutor. Also included is Pop-Up DeskSet Plus, a \$129.95 retail value, selected Editor's Choice in a recent PC Magazine review on desktop programs. Don't delay. Order our Bonus Pack today and get the accounting system everyone is talking about!

give you what you need to know to manage cash-flow, turn inventory and increase profits. Dac-Easy Accounting's seven modules work together perfectly. Enter data once and it's posted to the other modules automatically. Most modules can also be used stand-alone.

No matter what type of business you have, Dac-Easy Accounting can make 1987 a better year. It offers the rare ability to handle either service or product-oriented companies without sacrificing features.

Dac-Easy Payroll for 1987 is here just in time to help you get a handle on the new tax laws. Dac-Easy Payroll is the fastest selling payroll package on the market. It not only processes your payroll, but helps you with

personal functions as well. Dac-Easy Payroll automatically calculates payroll taxes for all 50 states, prints checks, W-9s, and allows you to review your departmental payroll taxes hundreds of different ways. Priced at only \$49.95, it is another example of the price/performance value of the Dac-Easy Series.

Find out for yourself why Dac-Easy Accounting is the fastest selling accounting package in history. Call us today!

Minimum hardware requirements
All Dac-Easy products run on IBM or other compatibles, 386K memory, two disk drives, MS-DOS, PC-DOS 2.0 or later, 188-column printer in compressed mode, color or monochrome monitor.

#128

A complete list of things to know about 2400 bps modems.

Now that you've memorized that, here's a partial list of why a Hayes® Smartmodem 2400™ is best for you.

1. The Hayes Smartmodem 2400 allows you to communicate with the vast installed-base of 300,1200 and 2400 bps "Hayes-compatible" modems. The Hayes Standard "AT" Command Set allows you to use Smartcom II® and other software that communicates.

2. Through synchronous/asynchronous technologies, the Smartmodem 2400 permits your PC to access mainframes, minis, and on-line services previously inaccessible through asynchronous-only modems.

3. The Hayes Smartmodem 2400 is efficient...it pays for

itself in just 4 hours of annual use over long distance.

4. The technology of the Smartmodem 2400 allows you to transfer volumes of files with confidence across the city or

across the ocean using Bell and CCITT standards.

5. The new Smartmodem 2400B™—a plug-in board for the IBM PC and compatibles—allows synchronous and asynchronous communication through the same Com port.

6. You will also get the Hayes standard 2-year limited warranty and the opportunity to extend the warranty to 4 years.

Best of all...you get Hayes. And that's all you ever really have to know!

For more information or technical specs, contact your authorized Hayes dealer. Or Hayes directly at (404) 441-1617.

Hayes Microcomputer Products, Inc., P.O. Box 105203, Atlanta, Georgia 30348.

LETTERS

crosoft expanded memory specification, that break 640K.

Mr. Petzold also makes the incorrect assumption that video must be modified in order to derive any benefits from extended memory. The All Card can run programs conforming to EMS and other specs, as well as resident programs in the same extended memory, without any video modifications. While some earlier bugs in our software made it more difficult to deal with the more advanced usage of our product by modifying video, our current version has eliminated the known bugs and is simpler to use. The problems that Mr. Petzold cited were primarily due to earlier bugs rather than to the complexity of using modified video.

Mr. Petzold's completely negative attitude toward the All Card is best exemplified by his statement: "The board's packaging heralds it as 'a lifetime investment' with 'expanded growth potential.' This for a board that is not compatible with EGA?" Correcting Mr. Petzold, the All Card is actually fully compatible with EGA when running either with or without larger DOS and EGA.

Finally, there are several other errors made in the charts accompanying the article. For example, the Benchmark Tests chart incorrectly states that the All Card does not include a RAMdisk with EMS. Also, the Summary of Features table should state that the maximum memory on-board is 6 megabytes, the maximum memory with two boards is 9 megabytes, and extended memory is provided with the All Card.

In closing, I would like to say Mr. Petzold is certainly free to pick Intel Corp.'s Above Board/PS as his choice, but we ask that we be treated fairly and readers be given the facts on all the important and costly issues so that they can arrive at their own intelligent conclusions.

Mers Kutt
President
All Computers Inc.
Toronto, Ontario
Canada

Charles Petzold replies:

Thank you for your comments. The factual information in my review of the All Card was correct for the product All Computers

sent us for evaluation. I stand by my assessment of the board and my conclusions.

RESPECT FOR SUPERCALC

Your article "SuperCalc4 Stalks 1-2-3" (First Looks, page 33, *PC Magazine*, Volume 5 Number 15) was short but commendable—finally, *SuperCalc* gets some respect.

However, your Spreadsheet Clinic is misnamed, in my opinion. A true, unbiased spreadsheet clinic should include not only tips for 1-2-3, but tips for other popular spreadsheet programs as well. May I encourage you to either expand your column to include other programs or begin a new column for *SuperCalc* users?

Ronald D. Jackson
Foster City, California

The Spreadsheet Clinic column is composed entirely of reader submissions, the overwhelming majority of which are Symphony and 1-2-3 hints. We print the best tips and advanced techniques that we receive, and we would love to hear from SuperCalc users or powers of any other popular spreadsheets. "Contribute to the Clinic" pertains to every spreadsheet user.—Ed.

CORRECTIONS

MicroSpeed, makers of the Fast88 accelerator board ("The No-Slot Alternative to Acceleration (And Why It Makes Sense)," *PC Magazine*, Volume 5 Number 15), has changed its address. The new location is 5307 Randall Pl., Fremont, CA 94538.

HOW TO WRITE TO PC MAGAZINE

Do you have a comment, compliment, or criticism about something you've read in *PC Magazine*? A question you'd like to open up to other readers? Then send your opinion on paper or disk to Letters to *PC Magazine*, One Park Avenue, New York, NY 10016, or send your opinion through MCI Mail to PCMAGAZINE at address 157-9301. We're sorry we're not able to answer letters personally.

All letters become the property of *PC Magazine* and are subject to editing. We cannot publish letters that do not include a name, address, and phone number for verification.

South Seas Shipping Company

November 25, 1988

Mr. Dairy Lyons
Import Officer
Biological Research Ltd.
25 Weymouth Road
Newbury, Putney, New Guinea

Re: Pain Fruit Research

Dear Mr. Lyons:

The letter enclosing this agreement was received at our mailing last week in San Francisco. Biological Research, Ltd. will recommend the optimal conditions for shipping pain fruit and pain of other important ailments for consideration re: temperature during shipping and length of time between import and export.

What if...

YOU COULD PRINT EVERYTHING ON THIS DESK FROM A BUSINESS PC?

The world's best-selling desktop laser printer has something in store for just about every business that's ever dealt with the printed word.

Because the Hewlett-Packard LaserJet Printer is the only printer of its kind specifically designed to work with over 300 software programs. And since it hooks up to almost any business PC, it's right for all kinds of users—not just the art department. So you can print everything on this desk—from simple memos to your life's memoirs. And get high-quality, professional-looking output.

Combined with our very fast, very versatile HP Vectra PC (it's IBM PC/AT compatible) and the software of your choice, the HP LaserJet is the cornerstone for a complete desktop publishing solution. One your whole company can easily use.

Of course, the HP LaserJet also works with IBM PCs and compatibles. As well as software like Lotus 1-2-3, WordStar and d:BASE II. And, for around \$3,000, it's the laser printer you can afford.

We can't print all the reasons our HP LaserJet is the printer of choice. But if you stop by an authorized HP dealer or call us at 1 800 367-4772, Dept. 709M for the one nearest you, we'll show you why HP quality printing makes very good business sense indeed.

HP Vectra PC

Print output produced on a laser PC with the following software packages: Studio Software, Spinnaker, Desktop Publisher, Microsoft WordStar 2000 (with 1.2" 3" and 5" disks), HP LaserJet PC, A.C. Inkjetmark of Hewlett-Packard, Lotus Development Corp., and other software. © 1988 Hewlett-Packard Co.

JUST RELEASED

Unleash the power of your LaserJet™

Mix any combination of fonts

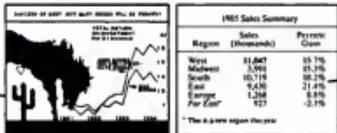

Merge text and graphics from any program

Print extended and foreign language characters

Use all the printing features of your LaserJet with Polaris Ram-Resident PrintMerge

Ram-Resident PrintMerge gives you quick and easy access to all the LaserJet's printing features—for merge which need processing, diskless or LaserJet-compatible graphics program you're using. With a few simple commands, you can turn a bio-hair report into an exciting, visually appealing presentation. You'll be able to format text from virtually any program and combine it with the graphic output from any graphics program that can print on the LaserJet.

For instance, the chart on the left was created with Graphic Communication's Frontbase and Graphwriter. Ram-Resident PrintMerge over prints properly aligned tables made up of any combination of proportional fonts like the table on the right.

You also get full access to all the formatting you've been missing with DisplayWrite 3. Moreover, it's which include sections of any fonts, right justification or any combination of fonts, and a handy line and box drawing function. Plus, keyboard translation screens give you instant access to the LaserJet's foreign language and special purpose characters. Here's a small sample of words you can type without missing a beat:

Nielsen	€125	3481
Wahl	Persepolis	17 A4
Matchan	Chad	

So why not ask about Polaris Crunch, a program used with Ram-Resident PrintMerge. Polaris Crunch automatically reformats text to save the LaserJet can handle. It also stores and trans graphics images which allows you to print only the amount you want.

Read more about Ram-Resident PrintMerge below.

Justify any proportionally spaced text

Align tables printed with proportional fonts

Draw lines and boxes

Your software only lets you use a small fraction of the LaserJet's printing capabilities. Unfortunately, that also limits how precisely you communicate your message. That's why you need Polaris Ram-Resident PrintMerge.

It's the only program that puts you in direct control of all the LaserJet's printing capabilities—so you control what your document looks like, not the limitations of your software.

You'll be able to add graphics right in the middle of your text. Use all the LaserJet fonts and extended characters wherever you like. And print it all beautifully with Ram-Resident PrintMerge's justification and line-drawing abilities. What's more, Ram-Resident PrintMerge works with the software you're already using, so it's very easy to learn.

Since Ram-Resident PrintMerge lets you merge graphics from virtually any program that prints on the LaserJet, you can reinforce complex ideas with illustrations right in the text. You can merge the graphic output or save a screen image, and merge either in any of four print resolutions. If your graphics are too large for your LaserJet to handle, try Polaris Crunch, a separate program that compresses, rotates and trims images.

With the help of Ram-Resident PrintMerge's useful formatting features, your document

Runs Directly From:

DisplayWrite 3 **WordStar**
Multimate **Microsoft Word**
Freelance **Graphwriter**
Lotus 123 **Javelin**
Paradox **WordStar 2000**
NowWord **Framework**
R:base 5000 **Easy**
Map-Master **Microsoft Chart**
WordPerfect **PC Crayon**
Chart-Master **Sign-Master**
and more

will be as impressive as its contents. You'll be able to use LaserJet fonts in any combination for more attractive, readable text. And justify right-hand margins and align table columns printed with proportional fonts—even if they're downloaded from diskettes. For extra emphasis, use Ram-Resident PrintMerge's line and box drawing capabilities and the LaserJet PLUS patterns to highlight important ideas.

And when you need to use extended or foreign language characters, Ram-Resident PrintMerge's five keyboard translation screens will put them at your fingertips instantly.

But even with all these features, Ram-Resident PrintMerge is truly easy to use.

use them again and again. "Ram-Resident" means it loads automatically when you boot your system, so it's always ready. Just use your software as you normally would. When you need Ram-Resident PrintMerge's special features, set up the printer with one of the nine setup screens or key in the simple print commands right in your document.

Put the rest of your LaserJet's printing power to work for you. Call these toll-free numbers to order your Ram-Resident PrintMerge. Versions are available for IBM-PC/100% compatibles. There's a 30-day money-back guarantee, so order now without risk.

Free source code in every box.

Actually, we give you two things free. Our source code. And your freedom. Just buy part or all of our excellent integrated business accounting system, the SBT Database Accounting Library.

We'll give you our source code absolutely free. Which, in turn, gives you the freedom to customize our software to fit your business needs.

Say, for instance, you want to change the way a management report is formatted. Our free source code enables you to change it.

What's more, the change will be quick and simple because our software is written in easy-to-use dBASE.

In fact, the entire SBT Database Accounting Library runs with dBASE III or dBASE II,* so you get the power and flexibility of those best-selling programs. Plus the freedom to use any computer that runs dBASE.

The SBT Database Accounting Library. Great software and freedom. All in the same box.

TOMY'S TOP QUALITY AIDS TO YOUR PROGRAMMING PRODUCTIVITY

GREENLEAF Bountiful Harvest FUNCTIONS

C source, assembler source, and binary libraries of 225 functions for many compilers. Emphasizes useful functional groups to streamline listing code which your application may never use. Manual helps select functions; bulletin board too.

A sampling: DOS extensions for file and directory manipulation. Screens to select main menu, macro or color palette, cursor shape, positioning, clearing and scrolling, pixel get and put, read light pen. Screen, Center, justify etc., efficient text operations which add, delete, sort string pointers for top speed. Other: graphics character matrices, keyboard array, function key assignment, text/delete read register and memory save, power and poke. Mature best-seller. Specify 30770 & Compiler List **985 Here #138**

PFORCE Phoenix Action PFmanual

Linux® didn't do badly pulling it all together in one place. Phoenix has followed suit with the ultimate integrated C library offering everything from low level functions for hardware access to complete b-tree database management. Among the way are prerequisites such as string manipulation, min/max, file and screen editing, and also link styles of menus (links included), windowing, background tasking, DOS interfaces, directory management, even interrupt-driven communications. Describes emphatically characteristics of windows, databases, records and fields can be annotated and changed outside functions.

Change collection sets of instructions and Phoenix™ has tutorials, extensive examples, quick reference, and on-line help.

Everything in source, no royalties, all modern models of LANs & PC's. Specify S020 & Compiler List **473, PCB #349**

GREENLEAF Hello World COMMUNICATIONS

Want your application to communicate with other users or remote data bases by asynchronous communications built right into your C program? Even if you don't need it now, that's a skill to have at the ready! This functions and macros program in both C and assembler source code set up separate transmit and receive ring buffers for up to 8 simultaneous channels. Infrared driven so you can talk an accounting report, display it, file it, let the user edit it, then continue. Goodbye separate communications software.

Supports up to 9600 baud, ASCII or binary with any parity word length, 65536 UARTs, Xon/Xoff and Xmodem. Wide/Quick receive. Specify: S0750 & Compiler List **985, US #138**

PRE-C PRICE SLASHED! Pick the List from Your Program

Pre-C is like UNIX®! It finds problems your compiler won't. Problems that a debugger will have trouble figuring out. Even problems which will cause trouble with other compilers.

Compilers see one module at a time. Modules only meet at link time. Pre-C looks at all modules at once and reports conflicts in data type declarations, function call parameters which disagree with function signatures, dependent expressions which inhibit portability. It spots obsolete usage (even C changes) casts with suspect conversions, variables never used, functions never called, unreachable code. Address to UNIX System III compile standard to ensure your portability. Ask for P059, List **926, Price #98**

DAN BRICKLIN'S DEMO PROGRAM Storyboard Your Program

The Legendary One has created Metaplot Two when the rest of us are still on Zotto. Dan's first was the original electronic spreadsheet (VisuCalc™). This one is for programmers.

Wants down a storyboard program idea because programs are screens? Dan's Demo creates slide shows. Create a screen — a snapshot of your planned program as it runs. Specify colors, borders, box rules, inverse and underlining of monochrome, fore- and background color. Copy this "slide" to an empty screen. Change it a slide to show the next instant of run time. Do as you please. A whole slide show of your program in action.

All 250 characters and attributes are available from scrollable lists which pop to become the essential tool in user interface prototyping. Tech Journal. Ask for N010. List **725 US #69**

90x25 character mode, not bit-mapped. Screen area can be blocked for out and paste or filled with color or characters, even blank. Slides can overlay on others, can be shuffled, deleted. Slides can proceed at time intervals or branch anywhere in the slide sequence depending on user keyhits.

Invaluable to prototype the program you are about to write, to position the labels, choose the color codes, smooth out the keystroke interface. Or load the "capture" utility and snapshot the screens of any running program, for an exact slide show.

Each copy entitles you to redistribute it to the slide program manager that runs demos. Plan manual, no binder keeps price of big product small. "Mighty Mouse" is the essential tool in user interface prototyping. Tech Journal. Ask for N010. List **725 US #69**

BASTOC OPTIMIZES! Translates BASIC Into C

F or a trifling price, BASTOC™ moves the execution of BASIC code over to C by a translator which enters in Microsoft Extended BASIC and emits pure M&K C for Lattice 3.0. It will optimally convert your program into a single monolithic C function or decompose it into separate functions, one for each OS/2 file!

Version 3's optimization dramatically reduces execution time. Converts to integrates those variables in BASIC programs which do not need floating point. Where BASIC uses full assignment statements to implement arrays, BASTOC converts to C compact form. Strings dynamically allocated adding your application of BASIC's constant built for garbage collection. Creates structure of event controlled BASIC code. Huge worksheet.

RYAN-McFARLAND FORTRAN NEW! A Mighty Fortress Is Their FORTRAN

Picking over features of most products is not necessary if FORTRAN is your need. Still the cradle of scientific and engineering work, Ryan-McFarland has led the competition in building the great RM-FORTRAN™ as a complete implementation of FORTRAN-77 (ANSI X3.9-1978), the only PC FORTRAN certified by the General Services Administration as the highest test level. The reason, a 64 bit mainframe compiler moved to PCs, with the bonus that mainframe and mainframe applications can transfer between.

RUN/C PRO C Interpreter Links Binary Libraries

Run/C comes in an appetizer and a professional. The professional model actually links and loads multiple binary function libraries like C-Rod, Smartgraph™ and Halo Graphics™ — potentially any library compiled with Lattice's large model. Inside this interpreter, your C program can reach for functions in the best of commercial libraries.

The C interpreter behaves like PC BASIC models WordStar™. Use filenames editing to create a program. RUN C if it variables, LIST it, EDIT it, RUN it again. Use familiar commands like LOAD, MOVE, SAVE, FILEs, use TRIM and TRACE. Ideas for program development. Put up code at high speed, try out things differently. Use RUN/C and your mainframe. Blast away into high level code segments as underlaid locally.

Lots more features: system interrupts, a shell command to invoke any operating system command without leaving Run/C, directory cache extensively applied as a Run/C function. Call for debugging code, look from within your program, a specific function or a menu of aids including immediate mode, single-step trace, changing of variable values.

Manual shows how to develop the interface to a commercial library, using the Lattice compiler to compile. Link your own function archive the same way. OS/2 minimum, 512k recommended (to fit libraries). Ask for \$3650 List *250 PCB *185

PLINK86 PLUS Cached Overlays Maximize Memory Use

Long the overlaid of overlay links, Plink86 allocates large programs into small machines by swapping program segments in from disk to save memory. A 512k program could run in a 128k machine, for example. But Plink86 Plus is a compiler and if it finds itself a larger machine, it moves program overlays into leftover memory. Overlays now swap at memory speed not disk speed. Can automatically restore a displaced overlay to which a subsequently called overlay must now return, and assign library modules to the next segment or overlay areas. Plink86 Plus: List *495, Us: *359

TERMS AND CONDITIONS OF SALE

Licenses: Each price is for license to use a product on a single computer and does not constitute an ownership. We will require for you about site licenses. It is up to the customer, indicated or where "f" follows the Product Code, produced by MS-DOS, to make program and data backup without royalty payments or additional licenses provided the programs do not substantially replicate the product's message.

Compatibility: PC BRANDS standard products are tested to work with the IBM PC XT or AT under PC-DOS and require no more than 128k of RAM in PCs indicated. Non-IBM machines using MS-DOS contact manufacturer about precise fit. Licenses to use can be archived. **Restores:** See box top. Defective parts will be replaced. Please call for authorization to return a product for refund.

environments. Now, on your PC, you can develop large applications, with programs up to 640k (bigger using overlays), strings over 64k, and using a lot of C, C++, VAX and FORTRAN-66 extensions you may have grown fond of — long symbolic names, "in-charge", BIT but finally — because R/M has been so successful — a debugger.

But what really sets RM-FORTRAN apart is optimization. The compiler reduces the number of instructions in the programs which will actually execute and uses takes advantage of each processor's features to deliver lightning fast object code. It runs 30%-40% faster than Microsoft 3.2, and could make your mainframe not worth the trouble.

Comes with an interactive symbolic debugger like that accompanying IBM VS FORTRAN, Parkside 800, has a cross reference table, and debugger supports assembler and C subroutines, like IEEE floating point, 8087 and 80287 chips.

Compiler's documentation, ease of use and support of OS/2, C++, and debugger facilities place it first for recommendation; see 'Tech Journals' (00/86). R/M has been writing FORTRAN compilers for IBM, CDC, and 30 years. There is no greater expert.

GSS GRAPHICS SYSTEM ANSI CGI STANDARD! PRICES CUT! Leave the Device Driving to GSS

GSS™ has reconfigured two components of its comprehensive graphics tool to meet the ANSI Computer Graphics Interface (CGI) standard.

At the heart of the system is the Developer Toolkit which contains all language procedures and device drivers you'll need: boards, monitors, printers, cameras, and more. Drives house management of vector graphics (plotters) and bitmaps used by raster repair devices (cameras) to simulate the application program from concern for device idiosyncrasy. No one else has implemented CGI that way.

It means your programming remains generic; just switch drivers and the same program will draw a different device. OS/2 Kernel™ conforms to level 2b of ANSI's Graphics Kernel System (GKS) and contains all its needed drivers and language bindings. Kernel has macro level tools to draw and color an object, store the sequential instructions, and recreate the object on its own, as well as segment it, transform it, etc. So powerful, a single command may represent several screen lower level statements.

Also included is the equivalent GKS tool for graph edit and graph generation and their capturing. It handles it applies and oranges, say "line" and it binds the numbers into a disposable display for access of plotters. Kernel's GKS tool is the only one that can make trees that connect images they create to ANSI Computer Graphics Metaling (CGM), a tokenized standard for storing every form of graphic image data. The Metaling interpreter

LATTICE C COMPILER Major Upgrades to the Best Selling C Compiler

Lattice now embraces key UNIX™ C enhancements which have entered the language since K&R, and functions returning no value, enumerated data types to assign nested values to variables, data passing between structures by assignment. The greatly expanded libraries (325 functions) enable the file sharing and record locking provisions of DOS 3.1, provide a full complement of transactional, and a host of utilities to mimic the UNIX and XENIX™ environments.

Lattice 3.0 defaults to the ANSI proposed standard when you need strict adherence, but command line options restore leniency. And it adopts ANSI checking of external function arguments by data type to fill bag swears when modules join up at link time.

FOREIGN POLICY
We ship anywhere. Phone or Telex. We ship order Credit cards, Visa, MasterCard, and other major credit cards. We ship to all countries. Write to: Lattice C Compiler, c/o Chemical Bank, 126 BRAND, c/o Chemical Bank, East 86th St., NY NY 10028 Apartment No. 034-016058. We ship immediately and confirm by telex if you provide number.

Lattice now delivers smaller EXE files, boots very fast link times and a more efficient aliasing algorithm. New options generate code to use 80186 and 80286 features, 8087 of course retained and used, and since has saved development time so long that developers have created far more snap-on tools for Lattice C than any other compiler. William Hart's PC Tech Journal review of 12 compilers awarded Lattice the only "very good" rating for load on library availability.

BETTER BASIC Convert Microsoft BASIC Structured, Compilable.

C ombines the laminary of BASIC with the best features of C, Pascal, and Module 2, yet BetterBASIC is 100% compatible with Microsoft's GW™ BASIC and IBM BASIC including graphics, sound, and assembly language calls. So load your old programs and RUN, SAVE and they are converted automatically to BetterBASIC. It's good. Needs 180K. Programs can go to the PC's full 640k if you wish. Behaves like Microsoft BASIC at the interactive level, with a full-screen editor, direct statement execution, and always responds to RUN. It's fast. Each statement checked and compiled once, not every line encountered. Save runs 6 times faster than with Microsoft C-like structures house file records so goodbye to FIELD, MOVE, CVD, LIST, etc. Named "procedures" replace GOSUBs to subroutines. Lots more features, back-linker for compiled modules, trace, debugging breakpoints, cross-reference comment, 32k strings, DOS and BIOS calls with improved recursion. Run-time module stores back code for restoration.

BTREIVE ASK ABOUT XTREIVE & XTREIVE Queen B-tree File Manager Abdicates Royalties

It's no longer a time to incorporate Btrieve™ in applications, a welcome proclamation if royalties would run your profit margins. Btrieve takes complete charge of all file creation, indexing, reading, writing, deletion, deletion, space recovery, forward and backward search. It builds function call "commands" right into the language you use: interfaces to C, Pascal, BASIC, and COBOL, with sample programs in all four, come with each copy.

Btrieve has mainframe specifications. Its balanced-tree indexing scheme finds any file in a million or four less accesses. Files may range up to 2k indexes, fixed records length to 4096 characters, indexes up to 255 characters, files of 4 billion bytes.

Can even extend a file across two drives — even two hard disks!

Version 4 x speeds DOS interaction for large multiply keyed files, enables variable length records of virtually any length, wireless accuracy (optional) with read after write, useful in grry environments, offers password and data encryption.

The also Btrieve for Btrieve file inquiry and data manipulation, and Btrieve for report writing. All three in version 4 for any network that supports the MS-DOS 3.1 file sharing function.

Org Plus software creates org charts in minutes. Use any IBM PC or compatible.

The quick, professional way to show who's boss

All managers find organization charts essential for planning, budgeting and communicating. Why is Org Plus™ such an outstanding way to create these charts?

"I can get from an idea to a printed copy of a fairly complex org chart in 30 minutes or less," says Jim Seymour in PC Week.

Just enter names

Simply type names, titles, and comments into a display that shows each manager and their subordinates. Then let Org Plus do the hard work.

Org Plus automatically draws and spaces the boxes, centers the text, and precisely lays out the connecting lines. The chart is so exact you can use it in any situation, no matter how formal.

Yet, with a typical printer you have your chart in only 3 minutes.

Flexible

Choose from 7 chart styles and 8 box styles. Try one. Then try another with just a few keystrokes. You can even mix different styles in a single chart.

Charts are easily updated to keep pace with changing organizations. Add, delete or move employees—even entire depart-

ments. Org Plus is so fast you can use it to create alternatives before reorganizing.

Use Org Plus for planning and budgeting, too. Boxes can hold up to 6 lines of text, plenty of room to include salaries or expenses.

Even small organizations find an org chart helpful for communicating with vendors and other departments. As you grow, charts can be as wide as necessary with hundreds of employees.

By the way, Org Plus is designed so you don't need a secretary or an art department to do your charts. But, it can make their job easier, too.

Rave reviews

"The charts are perfectly laid out and attractive."—Glenn Hart, *PC Magazine* 2/25/86

"The program is so simple to use that you'll find little use for either the manual or the on-line help screens."—Henry F. Beechhold, *Computer Consultant* 6/86

Try Org Plus risk free

PC ADVISOR

Help for readers in deciding whether to buy a 3 1/2-inch microfloppy disk drive and in buying the right system to use with desktop publishing software.

EASY ACCESS TO 3 1/2-INCH DISKS

I'm thinking of buying a 3 1/2-inch disk drive for my IBM PC. Some people have told me that it plugs into the floppy controller, while others said it needs a new board. I've also heard that it costs about \$300 to \$350, in which case I would get a hard disk drive instead. Please tell me more about the 3 1/2-inch drive.

Eric Hsiao
Poughkeepsie, New York

Sounds like you're a forward-thinking fella, but I have to wonder if maybe you're getting ahead of yourself on this. It's a good bet that the PC community will one day embrace the 720-megabyte, 3 1/2-inch microfloppy disk as the diskette standard, but for now, these disks are simply a nuisance for those who must shuttle data between laptop and desktop PCs. The extra 360K bytes you get per disk may make the microfloppy drives seem a better buy over a 20-meg hard disk, but the real benefit of the hard disk is convenience: your data is always accessible. Get a hard disk before you buy a 3 1/2-inch drive.

When you're ready to adapt your data to the future standard, there are a few choices. IBM's external 3 1/2-inch drive is \$395 and available only for ATs and late-model XT's; it needs no controller, as it connects to a serial port in the AT, XT, or Convertible. IBM's internal drives are \$190; late-model XT's and AT's can use a drive that hitches up to a serial port. Earlier PCs need a different model (for the same price), which has its own controller.

Toshiba's ND354A fits in a floppy bay

and runs off the floppy controller (Tustin, Calif., (714) 730-5000, \$150).

Of course, laptop owners may never need such a drive: modem and null modem transmissions can keep files fluid.

DESKTOP PUBLISHING SYSTEMS

Our promotions department is buying an IBM PC and WordStar software very soon. We're also looking toward the day when we may purchase a desktop publishing system for our graphics department.

Are there any recommendations you can make for the PC we're purchasing now that may make it compatible with desktop publishing programs later on?

I realize that Macintosh is the top of the line for desktop publishing now, but all of the computers in our station are IBMs. I'd find it difficult to justify a system that would not be compatible with those units.

Karen Rugg
Binghamton, New York

Our recommendation: buy an IBM PC AT or compatible now and sit tight. We've seen several programs that are now in the late stages of development that will truly change the face of desktop publishing on the PC. They'll be ready by early 1987 and will require the speed and power of a 286-based machine to perform the calculations needed for sophisticated layouts; you'll also need a laser printer to get top-quality output. These programs will do everything you can now do on a Macintosh and a lot more. WordStar is a good choice; any word processor that can produce ASCII text will be fine. EGA graphics are a must, unless you're willing to pay for over-sized, high-resolution screens (\$2,395 for a 19-inch Monitorm screen, (612) 935-4151; or \$1,795 for a 15-inch Genius display, (612) 437-2233).

If you need a good program for producing leaflets and simple brochures now, try ClickArt Personal Publisher (Software Publishing, Mountain View, Calif.; \$195) or The Newsroom (Springboard Software, Minneapolis, Minn.; \$59.95). But if you can wait a few months more, can invest in a laser printer, and are willing to spend the \$700 to \$900 that the new programs will cost (and possibly the extra cost of buying Microsoft Windows; some will run only in that environment), you'll soon be able to create some amazing page layouts with your AT.

ASK THE ADVISOR

Send your questions to the PC Advisor, PC Magazine, One Park Avenue, New York, NY 10016.

■ It's a good bet that the PC community will one day embrace the 3 1/2-inch microfloppy disk, but for now these disks are simply a nuisance.

EasyPRINT—The New Easy Solution to Printer Sharing

That starts at less than \$100 per PC

Before

Using hardware switch boxes to share printers is now obsolete.

Introducing EasyPRINT™, the advanced low-cost solution to the problem of how to share laser, dot matrix, letter quality printers, and plotters among multiple PCs.

EASYPRINT HIGHLIGHTS:

- **Expandable.** Up to 14 PCs, XT's, AT's, or compatibles can be added to share any combination of printers or plotters.
- **Serial and Parallel printers can be intermixed.**
- **Automatic.** There are no manual switches to set. You can print directly from wordprocessing, spreadsheet or data-base programs without leaving your satellite PC.
- **Print Spooling.** The spooler on the HUB PC supports simultaneous printing from all satellite PCs. The spool size on the HUB PC is limited only by the size of the disk.
- **Advanced Forms Support.** It solves the paper changing problem without adding expensive hardware sheet feeders to your printer.
- **Supports cable lengths to 500 feet.**
- **Economical.** An EasyPRINT 2-PC Kit with cable costs only \$159.95. Now you can afford laser jet printers needed for desktop publishing by sharing the cost between multiple PCs.

INSTALLATION

EasyPRINT can be installed in less time than it takes to enjoy a coffee break. The EasyPRINT cables plug into your PC's serial ports.

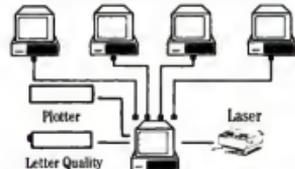

EasyPRINT's printer configuration program provides a menu driven installation program that will guide you step-by-step through the software installation process and lets you redefine your network as your printing requirements change.

After

DESKTOP PUBLISHING

EasyPRINT is particularly effective with expensive laser printers. EasyPRINT supports LaserJET™, LaserWriter™ printers and lets

you run programs with embedded PostScript™ support.

PRODUCT SUPPORT

We take pride in our quality product support. EasyPRINT support is provided over the telephone by the same people who have installed over 12,000 EasyLAN™ networks.

SPECIFICATIONS:

Each satellite PC requires a serial port and a licensed copy of EasyPRINT and uses 20k bytes of memory. EasyPRINT supports up to 14 satellite PCs.

The HUB PC requires a serial port for each satellite PC and a licensed copy of EasyPRINT. Our COM Port Boards are used to expand the number of serial ports. The HUB PC memory requirement is 20k for each satellite PC. The HUB PC supports up to four printers.

MS DOS or PC DOS 2.0 or above is supported. All IBM PC's or Compatibles are supported.

EASY TO ORDER

EasyPRINT Kits are available with all the cables, serial port expansion boards, and software necessary to install 2-PC, 3-PC, or 7-PC configurations.

EasyPRINT is immediately available and easy to order. Just call toll free 800/835-1515. Select from one of the Kits that fit your printing needs.

Desktop Publishing

Desktop Publishing Terms
At the heart of the personal computer publishing movement is a set of skills almost unknown to typewriters outside the typesetting trade. A major brochure outlines the typesetting trade. A major brochure outlines the typesetting trade. A major brochure outlines the typesetting trade.

Crisscross and slant are the measures of good typography. These two elements are a function of page composition, point size and typeface. The crisscross and slant are the placement of letters and the placement of words on the page.

Measurements

Pica and point are two important words. They are the fundamental units of typographic measurement. A pica equals 12/24th, or about one-third, inch. The pica is the rare dotted line: 12 points. Using them

typetting terms will save your communication with the professional graphic arts industry.
A standard measure for open space is the em, named for the width of the M, which is usually the widest letter in a typeface's character set. The use of ems is always equal to the size of the font. When you're set just point size, when you're set just in 12 point type, as long as 12 points wide.

Related to the em is the en, which is equal to half the width of an em or the width of the letter N. The two spaces, a non-breaking and, usually had as an inflexible unit, usually had as an inflexible unit, usually had as an inflexible unit. The process, called kerning, is determined by the slanting of the adjacent letters. In desktop publishing, typographer determines kerning by manual adjustment using various automated programs that interpret the codes and makes the line-ending decisions.

Because the letter blocks were originally made out of lead type, the vertical space between lines of type

Figure 11 The art of typography is now enhanced with the power of the PC.

XEROX

Now, desktop publishing software of such genius, you don't have to be a 'Leonardo' to use it.

Until now, if you were in the IBM PC world and wanted to join the desktop publishing revolution, the software was hard to use, expensive, and often rewarded you with documents that were technically correct, yet visually disappointing.

Enter Xerox genius for creating perfect documents and a new generation of desktop publishing software—Xerox Ventura Publisher. It combines the best of current page-oriented systems with the best of document-oriented systems to make desktop publishing easy as well as productive.

The special genius of Xerox Ventura Publisher is "stylesheets"—20 built-in formats that arrange text and graphics automatically. Choose a stylesheet (or create your own), combine your text and graphics, and Xerox Ventura Publisher goes to work at the amazing rate of 20,000 characters per second, formatting as many as 64 100-page chapters. Most other programs format a page at a time, just like the cut-and-paste process you're escaping.

It's easy. You manipulate text and graphics with a mouse. What you see is what you get when you print. (Buy a new Xerox full-page display, and you won't have to scroll to see your entire page layout.) Make a change on page 1 and before you can say "Leonardo da Vinci," the entire document reformats. Tables of contents, indexing and numbering of pages, sections, tables, captions and figures are automatic.

Unlike most other programs, Xerox Ventura Publisher runs on a standard IBM PC XT/AT or compatible—AT power is not required. Text can be created on, and converted from, most major word processing programs. Graphics can be imported from many graphics and paint programs—even scanned images are easily incorporated. It supports dot matrix, color ink jet and laser printers as well as PostScript printers and typesetters.

What price genius? The money you'll save by producing your very first 16-page booklet instead of sending it out will probably cover the cost of your very own Xerox Ventura Publisher software.

Xerox brings out the genius in you.

Xerox Corporation, P.O. Box 24, Rochester, NY 14692. 143B

Begin your career as a desktop publishing "Leonardo" by stopping in at any computer store featuring Xerox desktop publishing software, by calling your local Team Xerox sales office or 1-800-TEAM-XRX, ext. 143B.

HAUPPAUGE

Is Getting A Fast Reputation.

HAUPPAUGE started earning a fast reputation with their 87 Math Pak, the combination of an 87 chip and 87 Software Pak that's been accelerating PC math since 1982.

Next came their racy 287 FAST/5, a math coprocessor module with its own 5MHz clock, speeding up PC/AT math by 25%. (Pictured above.)

Now, Hauppauge Unveils the 287 FAST/10... Our newest math coprocessor for the PC/AT, the 287 FAST/10 moves out at 10MHz—more than doubling the speed of each floating point math operation. The FAST/10 accelerates AutoCad, 1-2-3, Symphony, Turbo Pascal, Framework and more. The FAST/10 also runs in PC/AT compatibles including the Compaq Deskpro 286, Sperry PC/IT and most 286 accelerator boards.

...And the 87 Software Pak Version 6.0 Designed to steal the heart of programmers, the 87 Software Pak supports IBM's BASIC Compiler 1.0 and 2.0, and Microsoft's QuickBASIC, executing math-intensive programs up to 20 times faster! The 87 Software Pak also performs FFT's and Matrix operations. For example, a PC (or PC/XT) with an 87 Chip and 87 Software Pak can perform a 512-point complex FFT in just 1.1 seconds. What's more, a PC/AT with a FAST/10 inverts a 25 by 25 element matrix in under 1 second.

1-2-3 Magic: HAL Makes Spreadsheets Intelligent

PC HANDS ON

BY CHRISTOPHER BARR

Remember in the movie *2001: A Space Odyssey* how HAL, the talking computer, took control of the spaceship? Seemed a little farfetched? The future has arrived: HAL exists, and although this HAL doesn't speak English, it does understand it.

HAL is the latest and second-greatest invention to come from Lotus Development Corp. A 1-2-3-only companion product, HAL lets you use English-language commands to run 1-2-3 (Release 1A or 2). In addition, this memory-resident program

Request: highlight formulas

First Quarter Sales				
Item	January	February	March	Total
Acets	\$123,280.00	\$234,800.00	\$345,770.00	\$703,850.00
Salts	\$234,800.00	\$270,450.00	\$380,257.00	\$885,507.00
Polys	\$333,670.00	\$380,570.00	\$195,773.00	\$909,913.00
	\$691,750.00	\$895,820.00	\$921,800.00	\$2,509,370.00

The cell relations in the range \$I...\$JH are:
 Row 10 = B10*(1+5%*3)
 Total = January + February + March

The HAL request box sits on top of the worksheet in place of the familiar 1-2-3 command menu. Here, HAL lists the cell dependencies and highlights the formulas.

allows you to do things never before possible, such as link spreadsheets and, finally, undo your last command, even if it was /Worksheet Erase.

HAL's best use is in analyzing large worksheets and manipulating fields of massive data. It's so easy to use, though, that just about every 1-2-3 chore can benefit from HAL.

Consider the creation of a simple worksheet. Copy HAL into your 1-2-3 subdirectory (it's not copy protected), and at the C> prompt type HAL. HAL will load itself and then load 1-2-3. Soon you are greeted by the familiar inverted "L" and

(continued on next page)

DESQview 1.3: First True Extended Memory for the 386

PC HANDS ON

BY CHARLES PETZOLD

DESQview, Version 1.3, from Quarterdeck Office Systems is the first available "80386 control program" that runs existing DOS applications in the virtual 8086 mode of the 80386 microprocessor. Virtual 8086 mode allows a much cleaner and more efficient approach to multitasking than has previously been available (see sidebar, "The Evolution from the 8088 to the 80386's Protected Mode," on page 35).

Although you can use DESQview, Version 1.3, on a PC, XT, or AT, it will look and act much the same as Version 1.2 (see review in "Operating in a New Environment," PC Magazine, Volume 5 Number 4). When run on the Compaq Deskpro 386, however, Version 1.3 allows existing DOS programs to run in both conventional and extended memory. This gives you the ability to simultaneously run several large DOS applications without bank-switched memory and without hitting the normal 640K-byte DOS memory ceiling.

Virtual 8086 Mode

The virtual 8086 mode that makes this possible is only available on the 80386 microprocessor. Although Version 1.3 uses virtual 8086 mode only when run on a Compaq Deskpro 386, Quarterdeck will be adding support of other 80386 machines and boards.

Virtual 8086 mode takes advantage of extended memory beyond the normal 1-megabyte addressing space. This extended memory is not bank-switched Lotus/Intel/Microsoft expanded memory or

HAL

(continued from preceding page)

an indicator at the bottom of the screen showing that HAL is available. Press the Backslash key and the HAL request box appears on top of the worksheet, replacing the I-2-3 command menu. Commands can now be typed into the request area.

Creates Formulas

Type "enter january to december across in C3", and HAL will insert January in C3, February in D3, and so on. If you had requested "enter january to december in C3" and not used the qualifier across, the months would be entered vertically, starting in C3 and going down to C15. If you make a mistake, press the Backspace key and your last command is reversed.

Similar HAL commands will enter the rest of your spreadsheet's data. Now, type "total all columns", and HAL will put a line under the last row and enter the totals below. If you move the cell pointer to the total in column C, you can see that HAL created the formula @SUM(C4..C6). When you type "graph this", HAL auto-

F1 opens HAL's context-sensitive help facility. You can write your own help screens to explain synonyms that you have added to HAL's commands.

matically enters the totals into a bar graph and displays it—of course, you could have requested a stacked-bar, line, or pie graph. Yes, it's that easy.

HAL alters I-2-3's functionality assignments slightly. F1 continues to be context-sensitive help, but if the request box is enabled, it activates HAL help screens. F3 and F4 are used to scroll backward and forward through the requests you have made during the session. You can see how I-2-3 would pro-

cess a command by pressing F6 after you type the command but before you press Enter.

If you press F6 after you type "graph this" in the example above, you can see that it takes I-2-3 over 60 keystrokes to define ranges and draw the graph. F7, usually the query key, is used to start, name, or end a transcript file. The transcript file is an ASCII text file in which all of your keystrokes are recorded.

Easier Audits

If the Undo option alone isn't enough of a reason to make you run out and buy this jewel, Lotus built in a number of analysis features that all allow you to easily audit a worksheet. With HAL you can highlight or list formulas, highlight or list dependents (the cells that are affected if a cell value is altered), and highlight or list precedents (feeder cells that affect the target cell).

HAL can also list cell relations, making it possible to check formula relationships for accuracy—an invaluable tool for locating mistakes in large spreadsheets.

Until now, multidimensionality, or the ability to cross-link spreadsheets with I-2-3, was only a pipe dream. HAL allows you to link two or more files as long as they are in the same sub-directory. For example, suppose you are working on a worksheet titled ATLSALES and the total in cell H22 feeds into cell B30 in another file

called TOTSALS. To make a link you would type "link h22 to b30 in TOTSALS." Save ATLSALES and when you next retrieve TOTSALS, HAL looks for links and updates the file.

Learns New Words

You can personalize HAL by entering your own synonyms to replace the command words. Say you want to end a session; HAL recognizes four different words to do this: bye, exit, quit, and leave. You can impart your own style to HAL as simply as calling the SYN_US PRN file and adding "adios = quit" or "ciao = quit" or even "later = quit" to the list of synonyms. More than one synonym file is possible but together they can't be more than 64K bytes. Help files can be similarly customized.

The biggest difference between using HAL with I-2-3 and using I-2-3 alone is ease of use. If you are new to I-2-3, HAL will get you up to speed in no time. If you are an intermediate I-2-3 user, HAL will make you a power user. Power users will appreciate HAL's compatibility with the I-2-3 macro language and the help it provides for debugging. As HAL said in 2001, "Look, you've got a lot of things to do. I suggest you leave this to me."

Is HAL Really an Upgrade To I-2-3 Posed as an Add-On?

HAL is a terrific product. It is silly for a serious user of I-2-3 not to buy a copy. But unless Lotus Development Corp. starts bundling HAL with I-2-3, the extra \$150 makes I-2-3 one of the most expensive spreadsheets on the market.

The introduction of HAL may be only the beginning of a new Lotus marketing strategy. Add-on products such as HAL and Turner Hall Publishing's Note-it and SQZ! are by their very nature actually ideas turned into "patches" to improve the original (I-2-3). It seems as though all these ideas posing as products should be included in an inclusive and major upgrade to I-2-3.

The introduction of HAL

as an add-on, instead of an integral part of an upgrade, may be a signal not to expect any more upgrades of I-2-3. Every future upgrade will be an expensive patch.

Surely people will not complain about Lotus's expensive upgrade policies with this strategy.

Take it or leave it.

Lotus's I-2-3 is now the first software package that has an immediate \$150 upgrade available. If Lotus follows this concept to its logical extreme, we can expect to see dozens of future upgrades sold as expensive add-ons. A copy of a fully upgraded I-2-3 could cost \$1,500 or more after all these patches are purchased.

—John C. Dvorak

DESQview*(continued from page 33)*

AST/Quadram/Ashton-Tate enhanced expanded memory. This is the extended memory that until now has been unavailable to DOS applications for anything beyond a RAMdisk or print spooler.

When installing Version 1.3 on a Compaq Deskpro 386, you don't need to do much beyond the normal *DESQview* installation procedure. The difference will come when you load up several applications that in total require more than 640K bytes of RAM. Instead of swapping some applications to disk, Version 1.3 will continue to run them all. The new memory limit is the total amount of conventional and extended memory installed in the machine.

Right now, however, *DESQview*, Version 1.3, is disappointing because it just

scratches the surface of the virtual 8086 mode.

Under the virtual 8086 mode of the 80386, however, a control program can map the display memory of each virtual 8086 session to a different location in memory. It could then transfer portions of this memory to windowed areas of the real display memory. This (and other abilities of virtual 8086 mode) allows real multitasking among applications that cannot be multitasked on the 8086 and the 80286.

Version 1.3 does not do this. It will not, in general, multitask among applications that write directly to the display. However, *DESQview* still will window some popular applications. This technique basically involves dynamically patching the programs to route display output elsewhere. This should not be expensive with virtual 8086 mode.

In theory, an 80386 control program can also protect the rest of the system from a crash that may occur in a single virtual 8086 session. Such protection becomes more and more important in a multitasking environment as the amount of memory available to run concurrent applications increases. Currently, Version 1.3 is doing only a minimal amount of this sort of protection.

On to the Future

Quarterdeck intends to make fuller use of virtual 8086 mode in the future, so *DESQview* buyers are advised to mail in their registration cards to guarantee that they stay current.

Although *DESQview*, Version 1.3, is the first program to tap virtual 8086 mode for multitasking existing DOS applications, being the first is no longer a guarantee of success. It is also necessary to do it right. Quarter-

deck now has some more work to do.

DESQview, Version 1.3
 Quarterdeck Office Systems
 150 Pico Blvd.
 Santa Monica, CA 90405
 (213) 392-9701

List Price: \$99.95

Requires: 512K RAM, two disk drives, DOS 2.0 or later.

In Short: Notable as the first program that uses the virtual 8086 mode of the 80386 microprocessor for multitasking. However, more extensive use of the power of the virtual 8086 mode will be necessary to prevent this distinction from becoming just a footnote. Not copy protected.

CIRCLE 448 ON READER SERVICE CARD

The Evolution from the 8088 To the 80386's Protected Mode

The Intel 80286 microprocessor used in the PC AT and compatibles is capable of running in either real mode or protected mode. Real mode emulates the first generation of microprocessors in the PC family: the 8086 and 8088 (the 8088 is an adaptation of the 8086 for use in the 8-bit bus IBM selected for the PC and PC-XT). When operating in real mode, the 80286 has the same 1-megabyte memory limit as the 8086 and 8088.

When switched into protected mode, the 80286 can address 16 megabytes of memory. In addition, protected mode includes hardware support for multitasking and (as the name implies) protection of tasks and the operating system from malfunctioning software that would otherwise cause a system crash.

Current versions of DOS support only real mode. Taking full advantage of protected mode requires a

more complex and sophisticated operating system. A version of DOS that supports protected mode is expected from Microsoft sometime in 1987. However, this protected-mode DOS will have only a limited ability to run existing DOS programs. The real value of protected-mode DOS will come with a new generation of software written specifically for this new environment.

Due to the problems of running existing programs in protected mode, the transition from current DOS to protected-mode DOS will be difficult.

The 80386 microprocessor supports both real mode and protected mode. In protected mode, the 80386 can address 4 gigabytes (4 billion bytes) of memory rather than the 16 megabytes (16 million bytes) addressed by the 80286.

Also, the 80386 microprocessor provides a third mode, called the virtual

8086 mode. Virtual 8086 mode is a middle ground between real mode and protected mode. It is part of protected mode but with blocks of memory defined to mimic the 8086 addressing space. Many virtual 8086 sessions can occupy various areas of the entire 4-gigabyte memory space. A control program could isolate and multitask several existing applications by placing each in its own virtual 8086 session with its own copy of DOS.

An operating system or control program written for the 80386 controls the mapping of memory accesses from these virtual 8086 sessions to actual memory. Thus memory accesses involving the display memory can be mapped somewhere else. An 80386 control program can also intercept anything from these virtual 8086 sessions that may affect the system as a whole (such as hardware interrupts or I/O port manipulation).

Virtual 8086 mode is actually more valuable under a protected-mode operating system, since it provides an

ability to run current DOS programs along with new protected-mode programs.

The release of an 80386 control program before the availability of an 80286 protected-mode DOS is disconcerting news for AT owners, particularly those who have been waiting over 2 years to get at the AT's potential 16 megabytes of memory. While AT owners can calmly accept the greater speed and address space of the 80386 (since that type of improvement is normal for an evolving line of microprocessors), virtual 8086 mode seems like something that should have been included in the 80286.

That would have been nice, but it hasn't happened. In the long run, protected mode will replace real mode, virtual 8086 mode will become irrelevant, and we'll all be better off. In the interim, however, the virtual 8086 mode provides a convenient way to multitask existing applications that is simply not available on the 80286.

—Charles Petzold

Ideaphone Integrates Phone and PC Without the Bells and Whistles

PC HANDS ON

BY FRANK J. DERFLER, JR.

Ideatech's Ideaphone is a card/software package that brings telephone functions into the PC. Ideatech included some useful and unique features, but it also kept the bells and whistles to a minimum, designing a system that's economical and flexible but not intrusive.

Aimed at heavy users of both the PC and the telephone—like telemarketers, stockbrokers, and order-entry applications clerks—the Ideaphone's emphasis is not on arriving at a completely seamless integration between the telephone and the PC, but on creating a useful base system with built-in programming hooks and hardware features that will integrate with applications software.

The Ideaphone consists of a full-length circuit board that has two telephone jacks and a parallel port. You can use your own headset, alternatively, you can buy either a \$50 Plantronics Spirit II headset or a \$60 Panasonic speakerphone from Ideatech.

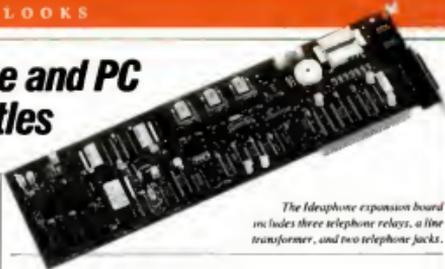

RAM-Resident Software

The Ideaphone software is RAM-resident, which makes excellent sense since telephone use literally does interrupt every other activity. Ideaphone's system takes up about 30K bytes of RAM and, like seemingly all RAM-resident software, comes with instructions to "load this program last." I've never figured out how to load every program last, but nonetheless have found this software well behaved enough to run with *SideKick* and *ProKey*, no matter in which order they were loaded.

Several features in the software offer good ties into applications programs. The software can read any phone number on the screen. You can either place the cursor on the first digit and tell the program to read the number, or you can have the

program always read numbers from the same location on the screen. This means you can use a simple RAM-resident word processing program to create a list of numbers (*SideKick*'s Notepad, for example), or you can put code into a DBMS applications program to have it write a phone number to a specific screen location.

The Ideaphone's dual-tone multifrequency (DTMF) decoding option listens for tones being entered by a caller, decodes

The Ideaphone expansion board includes three telephone relays, a line transformer, and two telephone jacks.

them, and sends the results to a specific memory location. An applications program can read the results and use them for a variety of functions, such as passwords, data entry, or remote control.

The manual for the Ideaphone

lists data and command addresses used by the telephone control software. A chart details the hexadecimal codes that will cause specific actions; these addresses and commands can be used to give an applications program complete control of the Ideaphone system. You can also construct a completely automatic answering system for remote data entry by writing an application that shares information with the Ideaphone software.

Telephone Features

The Ideaphone contains several useful telephone features. It lets you place a call on hold, flash the receiver switch (to get the attention of a Private Branch Exchange), and redial numbers. The system sends a short repeating beep to let a person on hold know that he is still connected. It will also remind you when a line has been on hold for a specified period of time.

In addition, you can instruct the phone to ignore a certain number of rings so that your

(continued on page 43)

The Fate of Computerphones

Nineteen eighty-five was to have been the year of the Integrated Voice Data Terminal (IVDT). In 1984 and 1985, companies such as Zaisan, Rolm, and Compaq unveiled PCs specially modified to allow integration with telephone features.

Other companies, such as CoSystems and Asher Communications, along with Rolm released add-on products that brought telephone functions into the PC. ITT came out with one of the most sophisticated of these devices, which combined voice synthesis and capture with telephone func-

tions—but the company's marketing effort was virtually nil. And IBM later joined the parade with the IBM PC Voice Communications Options package.

While sales have not yet matched the hopes of those who have invested heavily in this technology, the continuing arrival of new products demonstrates that you can't keep a good idea down. It just makes sense to integrate telephone and computer functions—at least for people who spend the greater part of their working day operating both instruments.

—Frank J. Derfler, Jr.

The Ideaphone's RAM-resident software reflects the product's simplicity: *redial*, *hook flash*, and *hold* are called by function keys. Little else is needed.

Also works with Lotus® 1-2-3® and Symphony™

CRITICS HAIL A BREAKTHROUGH

—InfoWorld Review Board

"It's more than good—it's indispensable. Home and small business checking software used to be too expensive, too hard to use, and too rigid, and it took too long to use. Quicken has changed all that."

—Ken Landis, A+ Magazine

"Thanks to Quicken, I'm automating my personal checking account. I've never seen such an easy-to-use manual or software that's so simple to use."

—Martin Bumenthal, InCider Magazine

"Now there is a program that truly saves time when it comes to paying bills and keeping track of tax-deductible items, and that program is Quicken."

—Parents Magazine

"Extremely simple and fast."

—Eather Dyson, Release 1.0

If you write checks, you need Quicken®—the breakthrough software that automates financial management for business and home.

The breakthrough is Quicken's fully automatic design. Quicken is so automatic it remembers your recurring bills and pays them—all you do is sign the checks. Automatic macros cut laborious data entry down to two keystrokes. Quicken manages your checkbooks and even finds and fixes your mistakes. It tracks and totals your expenses by date, payee, and category.

Quicken is so completely automatic it remembers to save and backup your data, even if you forget!

And if you use 1-2-3 or Symphony, Quicken will automatically fill in your spreadsheets with your financial data!

Quicken does the paperwork for you. It's bill-paying time. Fire up Quicken and the screen looks just like a check. Your first bill is the bank loan, you press two keys and, zap, Quicken's macros write out the full check. Next, the American Express bill. It's a biggie. You're glad Quicken knows exactly how much cash you have. Macros write the check, letting you pick how much to pay. You slip paper checks in the printer. Don't bother positioning them, Quicken does that for you! Sign the printed checks and slip them into Quicken's window envelopes ...you're done.

Compatibility:

IBM® PC, XT, AT, PCjr., and compatibles with 192K RAM and one or two floppy disk drives or hard disk. Any printer. No modem required. 1-2-3 and Symphony optional.

Apple® IIgs, IIc and IIe (Ile requires extended 80-column card), with one or two floppy disk drives, or UniDisk™ 3.5. Any printer. No modem required. AppleWorks optional.

Quicken is a trademark of Intuit. Apple, UniDisk and AppleWorks are trademarks of Apple Computer, Inc. IBM is a trademark of IBM Corp. Lotus 1-2-3 and Symphony are trademarks of Lotus Development Corporation.

*Parent Printing **Lotus Transfer Utility available for \$35 from Intuit

Recordkeeping? That's done for you.

With each bill, Quicken filled out your records, updated all balances, and saved it all on disk. Need to record a check you wrote at the store? No problem, Quicken's macros update your records in an instant. Expense tracking, tax reporting, budgeting? Simple. Say you want to know your charity spending. Ask Quicken, and you get an itemized list and dollar total. You'll always know exactly where your money is going. Want spending for Job 104 or Account 3072? The answers are just keystrokes away.

Need cost reports, P&Ls or other financial reports? Set up the spreadsheet you want in Lotus® 1-2-3 or Symphony. Quicken's ingenious Spreadsheet Transfer actually reads your spreadsheet and fills in the numbers you want, where you want them.

Dread reconciling the checkbook? Quicken makes it simple. And you can't go wrong: If there's a mistake, Quicken will pinpoint the error and automatically correct for it!

Vastly faster and simpler than old-style finance software. Quicken is the first financial software that's truly simple. No accounting mumbo-jumbo (no "debits," no "parameters"), no setup hassle.

The first finance software that's truly fast. Not just 10% or 20% faster, it's 200% to 300% faster than old-style finance software. The first finance software that's tested, approved, and recommended by leading banks across the U.S.

For every business and home—for professionals, for small businesses, for non-profit organizations, for computer experts and total novices. Quicken handles an unlimited number of transactions and accounts. Personalized checks for your printer are available for any financial institution in the U.S. or Canada. Free samples and order form are in every Quicken package.

At \$49, Quicken pays for itself right away for anyone who values their time. Quicken is a price breakthrough, too. Never has so much cost so little.

Maynard Has A Little Surprise For IBM PC Users.

Surprise,[™] Maynard's new high-speed board increases your IBM PC's* speed up to 2½ times, and doesn't take up an expansion slot!

"I just calculated my Lotus spreadsheet in a fraction of the time it used to take! Maynard's new Surprise is fast!"

"Maynard's Surprise jumps the PC's speed to 2.6 on the Norton SI scale! That's over 2½ times its normal speed!"

"I installed Maynard's Surprise even though I didn't have any expansion slots left! Was I surprised! Now my PC's faster than ever!"

Maynard Electronics

Shaping tomorrow's technology.

460 E. Semoran Blvd., Casselberry, FL 32707 305/331-6402

IBM's new 2,400 bps PC Modems
give you an easy choice:

Either

Stand-alone.
The IBM 5842
2,400 bps Modem.

Either way, you can't go wrong.

With IBM's new modems and a personal computer you can tap into information at a very impressive 2,400 bits per second (bps).

That translates into a binary file transfer speed of nearly 13 K characters per minute—or over six pages worth. Now imagine the impact that can have on your long distance telephone bill.

But these new modems aren't just fast, they're also versatile. They can both send and receive data asynchronously at speeds ranging from 2,400 bps down to 75 bps.

Both modems are compatible with the popular "AT" command set, as well as the IBM command set. And they have been tested for compatibility with leading PC communications software such as Crosstalk™ XVI, Microsoft® Access, Kermit, Smartcom® and Smartcom II®.

Or

The Automatic Modems

These modems feature

Automatic Adaptive Equalization at 2,400 and 1,200 bps—which means they will continuously fine-tune themselves to compensate for changes and noises on the telephone line. The result is, you can receive data over a wider range of telephone line conditions.

Both modems also feature automatic or manual answering and dialing. They'll automatically switch to pulse dialing if tone dialing doesn't work. They have automatic redialing. And once a connection is made, automatic speed detection. They also have automatic detection of a voice or a failed call.

A Modem with a Memory of Its Own

The stand-alone IBM 5842 2,400 bps Modem offers some additional features. It can also send and receive data synchronously at speeds of 2,400 bps or 1,200 bps. You'll find extensive "Help" menus. A dial directory for 20 phone numbers. A log-on directory for five log-on sequences. A built-in pattern generator for self testing. Diagnostics implemented from the front panel as well as from the computer keyboard. And a complete array of LED Status Indicators to give you a quick visual check on what's happening.

Internal.
The IBM
Personal Computer
2,400 bps Modem.

Which One Is for You?

The internal IBM Personal Computer 2,400 bps Modem is designed to occupy a half slot in the IBM PC, XT, AT and 3270 PC.

The stand-alone IBM 5842 2,400 bps Modem is compatible with all models of IBM Personal Computers. And, in addition to the features mentioned above and its internal power supply, the significant difference is that a stand-alone modem can be moved from PC to PC more easily than an internal modem.

If you feel that 2,400 bps is more modem than you need, we also offer the stand-alone IBM 5841 1,200 bps Modem, and the internal IBM Personal Computer 1,200 bps Modem.

For the Authorized IBM PC Dealer nearest you—or for free literature on the IBM family of PC Modems—call 1 800 IBM-2468, Ext. 141/EM. Or you can contact your IBM marketing representative.

Nobody licks our Lips.

LIPS 10 is emerging as the champion in Laser Image Printing Systems. As a second-generation printer, it beats all contenders to the punch. In value, as well as in performance.

It gives you a 10 page per minute print speed. That's 25% faster performance than the 8-count of first generation laser printers.

Want endurance? It delivers up to 600,000 pages during its long life cycle — six times longer than the leading challenger. That means, you can count on its low cost of ownership.

LIPS 10 goes the distance. It's made to print 15,000 pages per month, surpassing the 3,000 pages per month of its competitors.

You also get the style you're looking for. A big round of fonts and graphics. And PC software compatibility with three emulations that lets it take on the most popular applications. Plus, a smart panel that features a 40-character English text LCD display for ease of use.

The LIPS 10 laser printer. Compared to all others, it's clearly the champion.

Ideophone

(continued from page 36)

calls can be picked up by someone else before they ring on your system. A special switch on the board prevents the system from dialing out. This feature allows you to use the system as a receive-only telephone

for special applications.

The Ideophone lacks a few of the features found on fancier (and more-expensive) desk telephones—like the ability to sense a busy signal and periodically redial, as well as the ability to conference two lines.

Otherwise, the Ideophone's only really negative feature is

that it takes about 3 seconds to reset after completing a call. Telephone users in the United States expect a dial tone to be there when they pick up the receiver. Waiting 3 seconds to dial a new number doesn't seem like much, but telephone power users are just as picky about speed as microcomputer power

users are.

Will the Ideophone be a winner? Maybe. Ideatech supplies flexible telephone hardware and good ways to interface the Ideophone with applications software. But the key to success will depend on what applications other companies design for this system. ■

■ NEW ON THE MARKET ■ PAUL M. STAFFORD

Low-Cost Slidemaker Offers High-Resolution Presentation Images

Presentation Technologies aims Imagemaker, a PC-based desktop slidemaker, at business presentation applications. The \$4,995 device produces color 35mm slides, with 8,000-line

resolution, from PC graphics software.

Imagemaker uses a combination of phototypesetting and plotter technology and uses typesetting characters, symbols, and shapes on film from font cartridges, with text proportionally spaced and automatically kerned. In graphics

mode, it projects a beam of light onto the film, manipulating it like a plotter pen on paper.

It supports two film types: Ektachrome for high-quality slides, and Polaroid Polachrome for instant results.

List Price: Imagemaker, \$4,995. Presentation Technologies, 743 N. Pastoria Ave., Sunnyside, CA 94086; (408) 749-0746.

CIRCLE 443 ON READER SERVICE CARD

Presentation Technologies' \$4,995 Imagemaker allows users to produce 35mm color slides with 8,000-line resolution from standard business graphics software by writing with light directly onto film, much as a plotter does with pens on paper.

Turbofonts: Scientific, Foreign Characters For Top Word Processors

Scientists and users who write in foreign languages are faced with a difficult choice: they can either use one of the top-selling English-language word processors and improvise the special characters they need or settle for a special word processor that may not have all the features they need.

Image Processing Software's \$149 Turbofonts is an attempt to give such users the best of both worlds by adding screen and printer support for special characters to top-selling word processors such as *WordPerfect*, *Microsoft Word*, *MultiMate*, *OfficeWriter*, *Volkswriter 3*, *XyWrite III*, and others.

Turbofonts is a memory-resident program that takes over the screen, printer, and keyboard, allowing users a choice of over 30 predefined character sets or customization from a library of over 1,000 characters. The program works as is with an EGA and display or with an optional \$75 PROM with other configurations.

List Price: *Turbofonts*, \$149; optional character PROM, \$75. Image Processing Software Inc., 4414 Regent St., Madison, WI 53705; (608) 233-5033.

HOT PROSPECT

NEC's Multispeed: 9.54-MHz Laptop Weighs 11 Pounds, Runs DOS

NEC Home Electronics has moved into the DOS-on-the-run market with its 11-pound, \$1,995 Multispeed laptop computer.

The Multispeed's dual-speed power (software-selectable 4.77 and 9.54 MHz) derives from its NEC V30 microprocessor. Two 720K-byte 3½-inch floppy disk drives provide disk storage. The Multispeed includes 640K RAM and 512K bytes of built-in ROM programs, including an outline, a filer, a notepad, a dialer, and a terminal-emulator. Also included are parallel, serial, and phone ports and an outlet for an RGB monitor.

The Multispeed's display is a 640-by-200-pixel "super-twisted-pair" LCD, which is compatible with

IBM's Color/Graphics Adapter, and the keyboard features 85 keys, including a separate numeric keypad. A Hayes-compatible modem is a \$400 option, as is a \$99 adapter that lets you access a desktop PC's disk drives. **List Price:** Multispeed, \$1,995; modem, \$400; disk drive adapter, \$99. NEC Home Electronics (USA) Inc., 1401 Estes Ave., Elk Grove Village, IL 60007; (800) 323-1728; (312) 228-5900.

CIRCLE 433 ON READER SERVICE CARD

NEC's \$1,995 Multispeed laptop portable runs at a top speed of 9.54 MHz and contains 512K bytes of ROM-based software.

its RAMPAGE/EGA, a 2-megabyte AT-compatible expanded RAM card with IBM EGA-compatible color graphics on the board.

Retailing for \$1,795 with 2 megabytes of memory, the RAMPAGE/EGA supports both the Lotus/Intel/Microsoft expanded memory specification and AST's enhanced EMS and can allocate RAM to backfill conventional memory up to 640K bytes, as well as for expanded or extended memory. As well as the EGA, the display adapter supports IBM's CGA and monochrome standards and Hercules's monochrome graphics standard.

List Price: RAMPAGE/EGA, \$1,795. AST Research Inc., 2121 Alton Ave., Irvine, CA 92714; (714) 863-1333.

Modular Storage System Includes Disks, Tape, And Soon, CD-ROM

Western Digital Corp., the dominant maker of PC disk controller boards, has introduced a line of stackable small-footprint backup storage devices called VersaStak that are connected via a patent-applied-for interlocking switch. One PC board provides the SCSI interface to a 225-watt base power system that drives up to seven devices, from an 85-megabyte hard disk with a 30-millisecond access time to a 60-megabyte tape unit running at 5 megabytes per minute in streaming mode.

CD-ROM and CD-ROM modules will be added in several months. An intelligent file server is also planned. All VersaStak modules measure 12.5 by 9.4 by 5 inches.

List Price: VersaStak base, \$395; AT adapter card, \$195; XT adapter card, \$150; 85-Mbyte disk drive, \$2,995; 170-Mbyte disk drive, \$3,995; 60-Mbyte tape unit, \$1,395; CD-ROM, \$1,795. Western Digital Corp., 2445 McCabe Way, Irvine, CA 92714; (714) 863-0102.

1-2-3-to-AutoCAD Converter, Windows Graph! Expands Graphics Options

The business of business presentation graphics has gotten a shot in the arm from three programs that expand graphics options by interfacing with established programs.

Neuendorf Systems' \$100 *P2D* converts 1-2-3-generated .PIC-format files to AutoCAD's .DFX format. This allows you to generate simple graphs from their spreadsheet data and enhance them using AutoCAD's considerable resources.

Micrografx has added to its collection of Microsoft Windows-based CAD and drawing software (*Windows DRAW!*) and

*In-a*Vision*) with a presentation graphics package. *Windows Graph!* sells for \$395 and

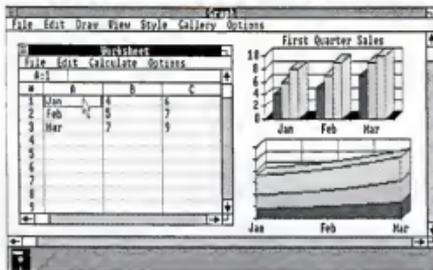

includes a run-time *Windows* module, so it does not require *Windows*. It supports the Dynamic Data Exchange protocol, allows linking of worksheets into charts, and includes a variety of interactive drawing features.

List Price: *P2D*, \$100. **Requires:** 256K RAM. Neuendorf Systems, 281 Continental Dr., Pottstown, PA 19644; (215) 327-2970.

CIRCLE 440 ON READER SERVICE CARD

List Price: *Windows Graph!*, \$395. **Requires:** 384K RAM, DOS 3.0 or later. Micrografx Inc., 1820 Greenville Ave., Richardson TX 75081; (214) 234-1769.

CIRCLE 441 ON READER SERVICE CARD

While it can stand alone, Micrografx's \$395 *Windows Graph!* supports all *Windows* functions, including the clipboard and the Dynamic Data Exchange protocol.

Express 60-Meg Hard Card: Wide Body, Sturdy Design

PC HANDS ON

BY HOWARD MARKS

Express Systems' 60-megabyte Hard Disk Card is the ultimate development in these bolted-together hard disk cards. Express has taken two Lapine Technologies 20-megabyte 3½-inch Winchester disk drives, an OMTI 5527 RLL-encoded half-length controller (allowing 30-megabyte storage on what would otherwise be a 20-megabyte disk), and the required brackets and cables to create a 60-megabyte hard disk card. Express charges \$1,095—about what others charge for 20- or 30-megabyte hard disk cards.

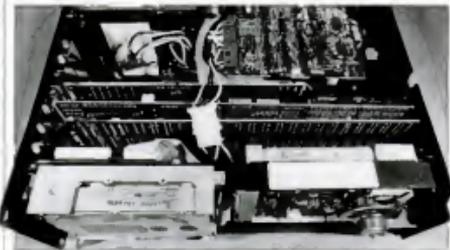

Although Express Systems has advanced the state of the art by creating this 60-megabyte hard disk card, the Hard Disk Card does have several significant drawbacks. Most important, it is large enough to cover three slots. The company rec-

ommends installing it in slot two (second from the speaker), where it will occupy slots one and two and the space up to the edge of the case.

The Hard Disk Card runs rather warm and does generate quite a bit of heat. When placed in a clone with several other cards, including a Genoa Spectrum, which also runs warm, my system showed signs of

overheating. Aside from the threat of imminent failure, running warm causes the problem of premature aging of the PC's chips.

The disk drives used in the Hard Disk Card are of ruggedized construction and include a mechanism to lift the heads off the media when powered down. The card is about as fast as most 20- to 30-megabyte add-on hard

Express Systems' chunky Hard Disk Card uses two slots if you use slots one and two on a PC, next to the cover; otherwise, the 60-megabyte card needs three.

PC FACT FILE

Hard Disk Card, Model 6060

Express Systems
1254½ Remington Rd.
Schaumburg, IL 60196
(312) 882-7733

List Price: \$1,095

Requires: DOS 2.0 or later.

In Short: A 60-Mbyte hard disk card that needs two or three slots.

CIRCLE 467 ON READER SERVICE CARD

disks with an average access time of about 80 milliseconds. Most 60-megabyte add-on disk drives use voice coil positioners with average access times in the 20- to 40-millisecond range.

The two disk drives are addressed as a C: and D:, though the Hard Disk Card includes a utility that allows you to run the card as a 60-megabyte volume.

Express Systems' 60-megabyte Hard Disk Card is a good buy for a PC that has spare slots and doesn't need fast access. But it should be avoided if your PC already runs warm. ■

FoxBASE + Maintains Stunning Speed, Adds dBASE III Plus Compatibility

PC HANDS ON

BY GLENN HART

When PC Labs tested Fox Software's *FoxBASE+* in Project Database II (*PC Magazine*, Volume 5 Number 12), it earned high marks for solid performance. *FoxBASE+* is based on *dBASE II* syntax, though, and so the many advances in *dBASE III Plus* weren't available in that package.

Now Fox Software has released *FoxBASE+*, which is derived from *dBASE III Plus*. *FoxBASE+* is basically a pseudo-compiler: your source code is compiled on the fly as it is loaded, or you precompile it for faster loading from disk. The compiled code can be run in the normal *FoxBASE+* environ-

ment or by a special run-time-only version (multiuser versions are available, too).

Developers can distribute the run-time version with their compiled code to hide the source from the end user. The run-time approach has a reputation for slowness, but this definitely doesn't apply to *FoxBASE+*.

Some other *dBASE* clones offer an assortment of nonstandard language extensions. Fox Software has decided to take a more conservative approach, with only a few new commands to tempt the programmer. The most notable additions are memory variable arrays and multiple relations out of a database. This last feature permits far more complex interrelationships between data files with

much less programming.

Initial tests of *FoxBASE+* were simply stunning. I ran the two reports written in *dBASE III Plus* for Project Database II. *FoxBASE+* ran them with no changes, as did Nantucket's *Clipper*. *FoxBASE+* was four to five times faster than *dBASE III Plus* and well over 40 percent faster than *Clipper*.

Fox Software claims to have run a quarter-million lines of *dBASE III Plus* code without any changes. *FoxBASE+* is extremely compatible, but it does have some significant omissions. There's no Assist system (which developers won't miss), and several of the newest *dBASE* enhancements—such as View, Query, Catalog, and the screen-painting system—aren't included.

PC FACT FILE

FoxBASE+

Fox Software Inc.
27475 Holiday Ln.
Perrysburg, OH 43551
(419) 874-0162

List Price: Development copy, \$395; royalty-free, run-time copy, \$500.

Requires: 512K RAM, two disk drives, *dBASE III Plus*, DOS 2.0 or later.

In Short: A fast executing *dBASE*-compatible interpreter also available in a run-time version. Not copy protected.

CIRCLE 468 ON READER SERVICE CARD

New versions of *Clipper* and WordTech's *db/Compiler* are due soon, and PC Labs will look at them, too. But, on the basis of this first look, *FoxBASE+* zooms to the head of the *dBASE*-compat@e class. ■

Orbiter: Simulating Space Labor

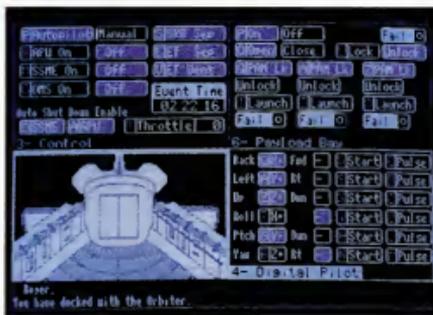

PC HANDS ON

BY STEVE SAGMAN

No doubt fans of *Gato*, the submarine simulation game from Spectrum HoloByte, are eager to rush out and try the company's new space-shuttle simulation, *Orbiter*. Many will be disappointed.

Unlike *Gato*, which is really a game, *Orbiter* is a highly accurate simulation. In fact, it's so accurate that it laboriously pinpoints the shuttle's exact position using elaborate orbital-mechanics computations. While that kind of precision will be a turn-on to astrophysicists and space-travel aficionados, it'll bore anyone else.

During a mission, *Orbiter* quickly bogs down under the

Orbiter's regularly updated control panel may give you the sensation of being in charge of the space shuttle, but it's short on visual impact.

complexity of all its calculations, and it uses too much precious CPU time to update bland

graphics screens of control panels with only a few interesting out-of-the-window views. Often,

you'll watch 4 or more real seconds pass for each second of simulation time. This program seems to have been designed for the computing power of an 80386 machine.

Working through the mission scenarios and recovering from random mechanical complications during flight (but not during launch) can be fascinating and challenging. And the number of conditions the program tracks is remarkable. But unless your PC is optimized for speed (an 80286 machine or an 8087 minimum), you'd better bring along at least one other crew member for diversion.

List Price: *Orbiter*, \$49.95.

Requires: 256K RAM, color/graphics adapter, DOS 2.0 or later. Spectrum HoloByte Inc., 1050 Walnut St., #325, Boulder, CO 80302; (303) 443-0191.

Goal-Seeker Answers Limited 1-2-3 Queries

PC HANDS ON

BY IRIS KNITTEL

Goal-Seeker, a memory-resident utility program that moonwalks through 1-2-3 spreadsheets, works backward from a goal you establish to find "what if" contingencies almost instantly.

The program uses just 40K bytes of RAM, and it's easy to learn; Alt-Spacebar brings up the menu. You can set the parameters of *Goal-Seeker's* search, and you can also piggyback goal-seeking in batch style.

The program does have a number of limitations. It will vary only one data element at a time to achieve its goal. In addition, the goal cell must be a formula that directly or indirectly references the cell where the solution will appear. And that solution has to be a fixed-formatted number (no dollar signs or

percentages).

Goal-Seeker's best application is in complex models where

you set various goals and want to test the interplay of individual factors. The program was developed by Information Software of Dallas and is now being marketed by Brown Bag Software.

List Price: *Goal-Seeker*, \$49, plus

\$5 shipping. **Requires:** 1-2-3, plus 40K RAM free. Brown Bag Software, 2105 S. Bascom Ave., #164, Campbell, CA 95008; (800) 523-0764; (800) 323-5335 (in Calif.).

Imagenhancer Plots on a Printer

PC HANDS ON

How to get an Epson FX printer to do the job of a plotter.

BY HOWARD MARKS

Like to have a plotter but can't justify the expense? Alps America has come to your rescue with its Imagenhancer card, which enables an Epson FX or compatible printer to accept Houston Instruments DMP-29 or DMP-41 plotter commands. You can

even get color plots from an Epson JX-80.

The Imagenhancer also serves as a printer buffer for standard text sent to the printer. It installs as either COM1 or COM2; and drives a standard parallel printer.

Since the card has its own processor and 225K bytes of memory, it performs the time-consuming vector-to-raster conversion necessary to draw plots on a dot matrix printer. While this enhancement doesn't speed up the actual printing of the graph, it does free up the PC much sooner. Printing a graph from *SuperCalc*, the computer was free to do other work four times faster than when the same

graph was printed with an Epson driver.

Imagenhancer always uses the highest-density graphics mode available on the printer, creating very sharp, attractive graphs.

The Imagenhancer cuts the time your computer is tied up printing graphs, allows you to use standard plotter commands on your Epson printer, and acts as a printer buffer to boot.

List Price: *Imagenhancer*, \$595.

Requires: Epson FX-compatible printer, DOS 2.0 or later. Alps America, division of Alps Electric (USA) Inc., 3553 N. First St., San Jose, CA 95134; (408) 946-6000.

CIRCLE 430 ON READER SERVICE CARD

Buy One. Get 12 Free.

Buy SmartNotes™ and get a one year gift subscription to Personal Computing (12 issues), Lotus (12 issues), PC Magazine (22 issues), or InfoWorld (51 issues).

SmartNotes is already one of the top-selling software products in the U.S.A. You don't need a special incentive to pick it up. But what the heck; 'tis the season to be jolly!

We've hidden a valuable gift certificate inside every box. Choose any one of four great magazines and receive a full year subscription on us.

If you've been planning to buy SmartNotes, now is the time to act. And if you've never heard about our product, a new magazine subscription might help you keep up. Lots of people are writing about SmartNotes. They say it's "remarkable," "brilliant," "indispensable."

Check it out. SmartNotes is like 3M Post-it Notes for your computer. It gives you an inexhaustible supply of bright little notes with special electronic glue on their back.

Stick them to database records, spreadsheet cells, DOS file directories and any phrase or passage in your word processor. Add comments, record assumptions and provide supporting information. Nothing slips through the cracks!

SmartNotes works great with Lotus 1-2-3, Symphony, Multiplan, SuperCalc, WordStar, Word Perfect, dBASE, R:BASE, the PFS Series, Sidekick and most popular IBM PC software. \$79.95 suggested list price. Not copy protected.

Subscription gift certificates are inside special marked packages of SmartNotes and must be redeemed before March 31, 1987. Available from Personics™ and at dealers nationwide. Certificate good for new U.S. subscriptions only. Not valid for renewals.

WE'VE PUT 200,000 PEOPLE INTO ANALYSIS.

Making tax decisions before tax season. (Version 2.0/IBM and compatibles)*

Analyzing your financial position with graphs and reports. (Version 1.4/Macintosh)*

Using graphics to capture your complete financial picture. (Version 1.5/Apple II family)

Using "What if?" analysis with budgeting to decide whether to lease or buy. (Version 1.1/Atari ST)*

Money.

As a source of emotional distress, few things can compete with it.

So it's nice to know that, when it comes to dealing with money, nothing competes with Dollars and Sense®.

For over three years, Dollars and Sense has been the world's best-selling way to come to grips with your financial behavior.

At home. At the office. Or both.

Dual personality.

If you yearn for user-friendliness and crave a context-sensitive helping hand, Dollars and Sense offers plenty of comfort.

Not to mention two sets of starting accounts (one for personal and one for business), a menu-driven interface and a manual that's

couched in terms even a novice can quickly come to terms with.

If, on the other hand, you seek software that can stand up to a small business, then the speed and automatic double-entry accounting that's built right in will give you a sense of power.

While the absence of copy protection will keep

you from feeling frustrated.

Achieving instant gratification.

When it's time to examine your financial profile—at tax time or any time you're in the mood—a keystroke is all it takes to generate the kind of detailed self-analysis you see at the top of this page.

Income statements, balance sheets, year-to-date summaries, cash flow analyses and a variety of charts and graphs will bring you face-to-face with financial reality.

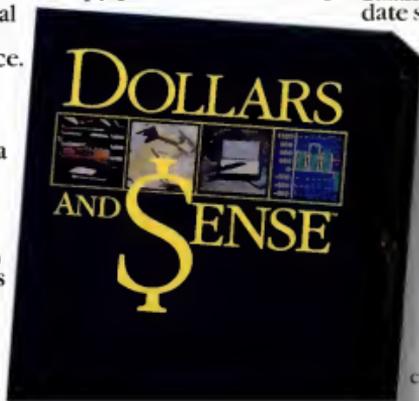

At which point, you may want to lie down.

POWER PAK!

The Source has the most powerful online communications package anywhere. And a special offer to help you pack more power into every online session.

The Source gives you the power to use each of its communication tools individually. Customize them to perform specific tasks or collect vital information automatically. Or combine them to fill your communication needs.

SOURCEMAIL Acclaimed by experts as one of the best electronic mail systems anywhere. Send electronic mail to one friend or a hundred clients, in minutes. Act on important messages with lightning speed. Eliminate annoying "phone-tag." Send letters to non-Source members via Mailgram® Messages.

PARTI A unique computer conference center. Create productive business, committee or club meetings with an ongoing word-for-word record of the proceedings. Read notes or post your own in hundreds of ongoing discussions on stimulating topics from Jazz Talk to Artificial Intelligence.

POST The Source's international online classified ad space. Post messages that will be read by users all over the world. Buy and sell items or services. Find other members of The Source through the Member Directory. You can even publish your own electronic newsletter. A dynamic, electronic "town square" at your fingertips.

SPECIAL INTEREST GROUPS
Available at special low connect rates.*
SIGS give you and other members with

similar interests an exciting place to meet, share information or exchange software. Dozens of group member directories, bulletin boards, databases and file libraries to choose from. Great for career or social networking.

CHAT Forget CB Simulator and the rest. Our new enhanced version gives you more control over real-time conferencing. CHAT with one person or a dozen. Compose messages of any length without interruption. Our listing of current online members makes it easy to find people to CHAT with. A powerful business tool and great entertainment when you want some time off.

AND MORE! Put these communication tools together with The Source's investor services, news and weather, airline schedules, personal computing information, a complete encyclopedia, games, shop-at-home and all the other features and you've got an online service that really gives you your money's worth. Plus learn The Source with our tutorial, FREE of online charges.

GET THE MOST OUT OF THE SOURCE WITH THIS LIMITED-TIME OFFER Join The Source between now and January 31st, and along with a complimentary SourcePak user's manual, we'll send you *How To Get The Most Out of The Source* by Charles Bowen and David Peyton—a \$14.95 value—FREE (while supplies last).

It's a great opportunity to get the most out of The Source's powerful online communications features.

*Online rates as low as 10¢/minute. Members subject to a \$10 minimum usage fee each month.

Send no money. To sign up, just mail this coupon. Or call The Source toll-free **800-336-3366**** and give our representative this claim number, 783ET30.

■ PC UPDATE ■ PEGGY GAVAN

Turbo Prolog, Version 1.1, offers increased support for natural language databases and expert systems, enhanced compilation speed, and reduced memory requirements. Upgrades are free to registered users. Borland International, Scots Valley, Calif.; (408) 438-8400.

Microsoft Corp. has released Version 3.0 of **Microsoft Project**. The new version links to Primavera Systems' **Primavera Project Planner** and supports several network systems, including Novell's NetWare, Ungermann-Bass's Net/One, 3Com Corp.'s Ethernet, IBM Corp.'s PC Network, and **Microsoft Networks**.

Relay Gold, Version 2.0, includes 3270 emulation board support, expanded documentation, and an applications program interface. Upgrades are free to users who purchased Version 1.0 after June 9, \$40 for all other users of Version 1.0, and \$100 for users of **Relay VM Personal Computing**, Danbury, Conn.; (800) 222-8672.

Yale Graphics Graphstation from Software Clearing House is being bundled with Mouse Systems Corp.'s **Fieldmouse**. The package sells for \$495, previously the price of the software by itself. Mouse Systems Corp., Santa Clara, Calif.; (408) 988-0211.

FormTool, Version 2.0, features a merge capability that automatically merges data from dBASE, dIF, or ASCII files to produce customized forms. The upgraded version also includes word processing capabilities such as word wrap and text justifying. Registered users can upgrade for \$25. Bloc Development, Miami Beach, Fla.; (305) 531-5486.

Fifth Generation Systems has released **Fastback**, Version 5.13. The new version is optimized for use with the Intel 8086 and 80286 microprocessors. Version 5.13 is not copy protected, and upgrades are \$10 for registered users. Fifth Generation Systems, Baton Rouge, La.; (800) 225-2775.

Managing Your Money, Version 3.0, is an enhancement that supports the new federal tax code, enabling users to explore the effects of the changes on their individual finances. The new version also incorporates support for Chase Manhattan's **Spectrum** home banking system. Upgrades are \$45.95 for registered users. MECA, Westport, Conn.; (203) 222-1000.

The new tax code made an upgrade to **Managing Your Money** necessary, but Version 3.0 also offers a number of enhancements, including support for on-line banking.

DITRON Corp.'s internal 256K-byte Printer Buffer now has the company's new **Soft Accessories** utility program.

DITRON Corp. has added its new **Soft Accessories** utility program to its internal **256K-byte Printer Buffer**. The software add-on allows users to erase the printer buffer's memory, control data output between printers attached to a single computer, and print multiple copies of documents from the keyboard. Upgrades are \$25. DITRON Corp., Glendale, Ariz.; (602) 938-3165.

3Com Corp. reduced the prices on its Ethernet line of adapters by as much as 18 percent. The basic **EtherLink** adapter was reduced from \$650 to \$595, and the **EtherLink Plus** dropped \$200, to \$895. In addition, 3Com has bundled its **3+Menus** menu-driven interface with its **3+Share** network package. 3Com Corp., Mountain View, Calif.; (415) 960-9400.

In brief: Version 2 of **PC Tools** requires only 64K bytes in its memory-resident mode and supports the Lotus/Intel/Microsoft expanded memory specification. Upgrades are \$5 for registered owners of **PC Tools** and \$15 for registered users of any other Central Point Software product. Central Point Software, Portland, Oreg.; (503) 244-5782...**LaserControl**, Release 3.0, has several new features, including laser printer setup, page enhancement, and printer emulation. Registered users can upgrade for \$35. Insight Development Corp., Moraga, Calif.; (415) 376-9451...**Chart-Master**, Version 6.2, allows hard disk users to send a series of different charts in succession to a plotter and can import 700 rows of data from other **Chart-Master** applications. Upgrades are \$75 for registered users. Decision Resources, Westport, Conn.; (203) 222-1974...**Protracs**, Version 4.0, tracks from 400 to 2,000 tasks per project and supports local area network environments. Users can upgrade for \$10 and a master disk. Applied MicroSystems, Roswell, Ga.; (404) 475-0832...Conographic Corp. reduced the price of its **Cono-Color 40 graphics adapter** to \$695, a reduction of 30 percent. Conographic Corp., Irvine, Calif.; (714) 474-1188...Irwin Magnetics reduced the prices on its family of **Backup tape drives** by an average of \$200 per model. Prices range from \$495 for a 10-megabyte-per-cartridge internal tape drive to \$895 for a 40-megabyte compact subsystem. Irwin Magnetics, Ann Arbor, Mich.; (313) 996-3300...**Clip Art Collection, Volume 3**, a \$29.95 package featuring sports and recreation illustrations, has been released for use with **The Newsroom** and **The Newsroom Pro**. Springboard Software, Minneapolis, Minn.; (612) 944-3915...**Encore!**, Version 3.1, has a custom screen data entry feature and interfaces for all versions of 1-2-3 and **Symphony**. Registered users should contact Michael Burke of Ferat at (703) 841-0800 for upgrade information. Ferat Microsystems, Arlington, Va....The second edition of **1-2-3 Tips, Tricks, and Traps** offers new shortcuts and problem-solving hints for use with 1-2-3, Release 2. The book is priced at \$19.95. Que Corp., Indianapolis, Ind.; (800) 428-5331.

PASM86 2.0: Better Syntax Checking, Equate Processing

PC HANDS ON

BY STEPHEN R. DAVIS

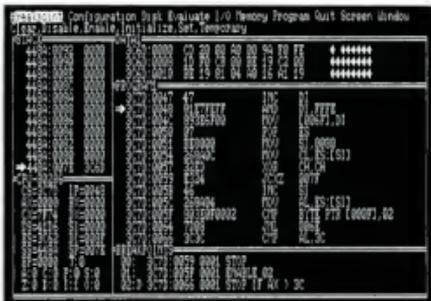

Why would anyone consider an assembler other than Microsoft's MASM standard? In the case of the new PASM86, Version 2.0, from Phoenix Computer Products Corp., the reasons might include an improved syntax checker, better equate processing, improved error messages, a larger symbol table, and a variety of professional assembly language aids.

PASM, Version 1.0x, was Phoenix's attempt to create a simpler alternative to the over-complicated MASM. Realizing that bucking the Microsoft standard is akin to trying to get *Flight Simulator* off the ground with the flaps up, Phoenix made Version 2.0 much more

MASM-compatible. However, Phoenix has remained true to its original principles.

When Version 2.0 encounters a dangerous or misleading,

but legal, construct (such as beginning the name of a variable with a "..."), PASM86 now accepts it but generates a warning message. PASM86's superior

The single-step mode in PASM86's full-screen debugger. PASM86 monitors your code and changes in the microprocessor's status as your program executes.

Instant Replay Adds Life To Software Presentations

PC HANDS ON

BY HOWARD MARKS

Instant Replay is one of those products with the potential to go from unknown to indispensable in your software library. A worthy rival to the more famous *Dan Bricklin's Demo Program* (by the creator of *VisiCalc*), *Instant Replay* creates software demo disks, tutorials, and prototype screen layouts. Anyone wanting to share his on-screen work has the tools to put those screens into a lively show.

Both *Demo Program* and *Instant Replay* create slide shows, a series of images that can simulate a program's operations or illustrate a structured presentation. You can create screens either by capturing them from the application you're modeling or by using the screen painter in-

cluded in the program.

The screen painter in *Instant Replay* is more powerful than *Demo Program's*, with full control of the IBM character set, colors, and attributes. You also can save and retrieve windows separately from the rest of the screen to allow a demo to use windows as overlays.

Uses Keyboard Macros

Instant Replay improves on the *Demo Program* repertoire further by allowing you to use any software product to create demos through its keyboard macro system. *Instant Replay* will memorize all of a demonstration session's keystrokes, along with the delays between them, and will play them back on demand. Using macros, you can capture and include bit-mapped graphics displays in your demos and can demon-

strate the speed of the product being demonstrated.

Has Keystroke Editor

A keystroke editor allows you to add or delete keystrokes and modify the delays between strokes for maximum effect. By using the keystroke macros with the screen painter, you can create impressive demos retrieving windows and moving blocks of text around the screen. You can make interactive demos with point-and-shoot menus to offer selections to the viewer.

You can prepare a demonstration of a package in about the same time it would take to run the demo. *Instant Replay* also includes a text editor similar to *SideKick's* notepad.

Used with Plus Series

Instant Replay's screen painter can also be used to define field types and allowable input string attributes, for use with Nostradamus's *Plus* series of code generators to generate procedures callable from Turbo Pascal, Microsoft or IBM Pas-

Instant Replay is an advance in prototyping software and a clear improvement over *Dan Bricklin's Demo Program*. It is recommended to anyone involved in software development.

STB's EGA Plus runs more of the best, faster than the rest.

If you thought all EGA boards were equally IBM compatible, look again.

Many EGA boards won't run certain IBM compatible EGA programs.

And if they do, they're likely to throw in a healthy dose of flickers and random characters.

Not STB.

When you run IBM compatible programs with EGA Plus, you get brilliant 16 color graphics and crisp, clear text.

And you get the fastest overall operation of any EGA board on the market.

PC Magazine[®] said it was due to "tight coding," but we like to call it better engineering.

Faster speed and better compatibility can save EGA users a lot of time and money.

But we didn't include them in the cost.

In fact, STB's EGA Plus is one of the best priced high-performance boards you can buy. See for yourself.

Once you compare EGA Plus with the rest, you'll see why we're simply the best.

For more information on STB's EGA Plus, fill out the coupon and send it to:

Tech Personal Computer's

Tech PC Twin Multiuser Starting From \$1699

Tech PC/XT base unit with 640K, and two 360K disk drives. Two high resolution monitors, two selectric style Hi-Tek keyboards, 50 feet of shielded cable to separate the two stations.

System supports up to six printers.

Full software support with multi-level file, security, electronic message facility to send and receive messages between users, password logon system, and system operator command level.

System supports all popular software such as Wordstar, dBaseIII, Lotus 123, Multimate, etc.

Tech PC Triad Multiuser Starting From \$2599

Tech PC/XT base unit with 640K, and two 360K disk drives. Separate Intel 80188 microprocessor running at 8 MHz and 512K for each terminal.

Three high resolution monitors, three Selectric style Hi-Tek keyboards, 50 feet of shielded cable to separate the three stations.

System expandable to 32 workstations.

System supports up to six printers.

Full support for multitasking multiterminal use with print spooling for multiple printers, background monitoring of the system, dial up bulletin board support, password protection, and file/record locking supporting PC Network protocol.

System supports all popular software such as Wordstar, dBaseIII, Lotus 123, Multimate, etc.

TinyTurbo 286 — \$695
AT Speed in a Half Slot
The People's Choice

PCTurbo 286e — \$1195
Double AT Speed in a Full Slot
The Super-Achiever's Choice

Now compatible
with Orchid's
dBus EGA

BE #1 WITH THE LEADER **Two Breakthroughs to TURBOCHARGE Your PC!**

Orchid became the #1 Turbo company by delivering the performance, price, and compatibility you wanted. Now we have followed our critically-acclaimed PCTurbo 186 with two powerful new 8MHz 80286 Turbos.

TinyTurbo 286

A half-slot PC/XT caching accelerator for AT speed at a tiny cost. It's 100% PC compatible, even with copy-protected software, because you can switch back to the 8088—a feature our competitors wish they had.

PCTurbo 286e

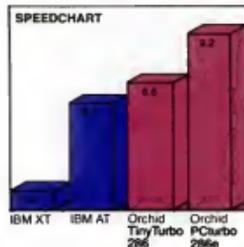

A full-slot PC/XT/AT coprocessor. Twice the speed of an AT; 5 times that of a PC for lightning calculations, dazzling screens, and unbelievable performance. A Megabyte of RAM, optional

EMS memory, and free RAM Disk, Caching, and Print Spooling. Now your PC can wait on you instead of the other way around.

Applications:

- ▲ **Windows:** No longer do you need an AT to make it fly.
- ▲ **Math:** Crunch through computations with 8MHz 80287 power.
- ▲ **Spreadsheet:** Load and recalculate with amazing speed.
- ▲ **CAD:** Redraw, zoom, and pan in a flash.
- ▲ **Database:** Run lengthy updates on Friday rather than all weekend.
- ▲ **EMS:** Supports Lotus specification.

Norton SI Program V3.0

Choose TinyTurbo 286
 If you would like AT speed.

Choose PCTurbo 286e
 If you demand the ultimate in performance.

The Innovative Leaders

Elgar SPF 550 and SPF 1000: Smooth Defense Against Power Outages

PC HANDS ON

BY WINN L. ROSCH

At 73 and 85 pounds, respectively, Elgar Corp.'s SPF 550 and SPF 1000 standby power supplies promise unquestionably heavyweight blackout-, spike-, and surge-protection for even the most elaborate desktop computer systems. In addition, Elgar's Failsafe utility, supplied with the SPF-series, ranks among the first to give truly automatic protection of your files and data even when your PC is operating unattended.

The SPF 550 will run its full load, 550 volt-amperes, under battery power for 20 minutes; the SPF 1000 can provide 1,000 volt-amperes for 14 minutes. The smaller unit is more than

enough for an AT and monitor; the larger one can power a more elaborate installation.

Both units are desk-side rather than desktop companions. The SPF 550 stands 17 by 14 by 9 inches; the SPF 1000 is 2 inches deeper. Both provide a pair of protected, three-prong outlets and only one control, an illuminated on/off switch.

Installation requires nothing more than plugging in the power supply and then plugging your computer into it. Both units use maintenance-free, sealed lead-acid batteries.

As with most standby power systems, the SPF units sit quietly near your PC until a power failure occurs, supplying the computer with filtered and spike-protected electricity from the power line. Their internal battery chargers

add no discernible noise to the office environment.

When power fails, the SPF units immediately toggle (switching within 4 milliseconds, according to Elgar) to battery-generated, pulse-width modulated sine-wave (Elgar's description) power. At the same time the circuitry emits a loud electrical whine that makes the built-in warning alarm, which rings every 15 seconds, superfluous—and almost inaudible.

A unique feature—and one of the biggest strengths of the SPF series—is its Failsafe utility. Activated through an RS-232 connection, the Failsafe utility will smoothly and automatically shut down the host computer once a power failure lasts for a duration that you set. The utility steps through a se-

quence of commands to save keystrokes, files, and data so that nothing is lost if normal power does not return until the SPF runs out of charge.

OrgPlus Puts Personnel in Order

PC HANDS ON

BY BILL HOWARD

OrgPlus does one thing: it builds organizational charts with considerably more speed than you could by hand or with a word processor or drawing program.

Like its year-old predecessor *Org*, *OrgPlus* allows you to construct an organizational chart with as many as 350 names on up to 99 levels. Most of the improvements in *OrgPlus* over *Org* reflect more-attractive ways to print the output, with eight box styles and seven chart styles.

OrgPlus needs some minor adjustments, though. As it stands, staff-level positions can't have anyone report to them. A department can't have two equals heading it. And you can't view the actual chart, even if you have a graphics monitor, but you can get a cryptic block diagram of the chart on-screen.

OrgPlus works with Fank Software's *Sideways*, if you

have a copy, to rotate dot matrix printouts 90 degrees (otherwise, you must cut and tape the print-

out together); *Banner Blue* should have written its own sideways-printing module.

Banner Blue Software's OrgPlus, invaluable for administrators and managers, builds organizational charts with eight box styles and seven chart styles.

PASM86

(continued from page 54)

Perhaps in response to the SYMDEB debug utility included with MASM, Version 4.0, PASM86, Version 2.0, has a nonsymbolic version of its own

powerful PFIX screen debugger. PASM86 also has a series of powerful programming aids, including a cross-referencing generator, a dump utility, and a special version of the assembler (LPASM) capable of assembling source files that have sym-

Monday - Friday****PARTIAL LIST OF FEATURES:****GENERAL FEATURES**

- Menu driven with 2 help references
- Multi-company and report generator
- User can easily install in minutes
- Sample data files included
- Complete audit trail
- All modules can post to multiple profit centers
- Fully integrated with single source entry
- Date sensitive user-defined fiscal calendar
- User defined financial reports
- User can categorize Accounts Receivable, Vendors, Payroll & Inventory by user defined type
- User can design checks, invoices, statements and W-2s
- User defined chart of accounts, account numbers and stock numbers up to 15 alphanumeric.

GENERAL LEDGER

- Allows for multi-company ledgers
- Unlimited multi-level accounts for departmentalized reporting
- Allows daily automatic posting to appropriate accounts
- Allows recurring journal entries
- User can process transactions two periods into next year
- Unlimited number of accounts
- Up to 10 year account history
- Allows budgeting

ACCOUNTS RECEIVABLE

- Open invoice and/or balance forward
- Allows unapplied payments and multi-company accounts receivable

- Handles credit limits, collection status and payment discounts
- Supports partial payments and finance charges
- Allows unapplied credit memos
- Up to 5 user-defined aging periods
- Customized text on user-designed statements
- Mailing labels and reports with 7 different sorts

INVENTORY

- Supports LIFO, FIFO, weighted average or standard cost
- Supports markup, margin or list
- Allows up to 4 places to right of decimal for units, cost & price
- Supports any unit of measure
- Supports quantity price breaks

SALES INVOICING

- Supports service or product oriented businesses
- User defined tax tables, including multiple sales taxes
- User defined sales discount tables
- Prints packing slips
- Prints immediate invoices if needed
- Alerts user to customer exceeding credit limit.
- Sales History Reports
- Customized text on user-designed invoices
- Automatic updating of inventory daily
- Prints sales journals
- Allows return credit memos
- Interfaces with General Ledger, Accounts Receivable & Inventory.

ACCOUNTS PAYABLE

- Can post to 200 general ledger expense accounts per month
- Automatically updates inventory and general ledger daily
- Automatically prepares payments
- Supports partial payments and handwritten checks
- Supports prepaid expenses and future liabilities
- Processes credit and debit memos
- Computes discounts and records discounts taken

PAYROLL

- Generates automatic payroll
- Automatically posts to General Ledger and Accounts Payable
- Provides up to 15 user-defined rates
- Allows post facto payroll
- Allows distribution of payroll expenses to user-defined departments
- Benefits and deductions are calculated on fixed amounts, hourly amounts, percentage of gross or variable
- Allows additions to gross which may be taxable, nontaxable, or partially taxed
- Handles sick leave and vacations
- All tax tables easily updated by the user
- Handles payroll draws, per diem pay, contract and piece work, hourly and salary
- Handles pay accounting
- Prints 941As and W-2s

HARDWARE REQUIREMENTS

- IBM PC® or compatible.
- HARD DISK REQUIRED.

■ FROM THE EDITOR'S SCREEN ■ BILL MACHRONE

OXYMORON ALERT

Contradictions abound in the personal computer industry. Sometimes we have to check our assumptions at the door and accept positive change.

What's your favorite oxymoron? Military intelligence? Postal service? Or how about the RS-232 standard?

There's something that touches the human spirit when we're confronted with a humorous, inherent contradiction in terms. Until today I would have said that "interesting accounting software" is an oxymoron, too.

Accounting is that ubiquitous application that users love to hate and computer magazines love to ignore. Never mind that software manufacturers, retailers, VARs, and accounting firms are making a bundle selling and servicing accounting installations. Never mind that accounting is the original business computer application. Never mind that computerized accounting is the only way to deal with the morass of laws, rules, and regulations that businesses of all sizes face.

Accounting is boring, right? The only way to make it more boring is to computerize it. Or so you thought.

NEW WAVE ACCOUNTING I've just seen *NewViews* from Q. W. Page Associates, a Toronto firm. And unless I miss my guess, accounting software will never be the same. The developers of *NewViews* threw away all the time-honored assumptions about accounting software and came up with a unique—and better—way of doing it.

First off, they disposed of the idea of separate modules for accounts receivable and payable, general ledger, and so forth. One master program does everything. It's

built around a hierarchical database model that starts at a menu selection screen and ends at transaction details. Each higher level of the database is built upon the preceding level's records. Each line that you see on a screen expands into a window containing the supporting transactions, records, or calculations, until you get down to the most elemental transactions.

Not only does every level have the exact same command structure, but there are five user-interface models to choose from: Ctrl-key (*WordStar*), Slash-key (*1-2-3*), Alt-key, pull-down, and mouse. Truly something for everyone. Better yet, it windows onto various portions of the database simultaneously. Best of all, it's real time. You add a transaction and the summaries or totals to which it applies are updated instantly. It's the accounting version of a 7-Eleven store: it never closes. Whatever it says as of your particular date of interest is a closing balance.

ACCOUNTING IS BATCH Now wait just a flimflam minute, all you traditionalists are objecting. Accounting is inherently batch. You apply a group of transactions by date, then summarize periodically for reporting. That way you have audit trails, batch totals, and all the other stuff you need to ensure auditability. I mean, that's the way accounting works, right?

Sure, if you don't mind waiting until the end of the month to find out if you're losing your shirt. The alacrity with which *NewViews* changes its view of your business's finances makes its name particularly apt. Of course it has audit trails and password protection of functions and modules so that you can ensure its integrity. In fact, it even divides its transaction audits and purge audits into two separate trails.

Oh, yes. And *NewViews* is written in assembler. You know where I stand on this issue: speed and functionality for the end user above all and the maintenance programmer be damned. Besides, properly written assembly language isn't any more difficult to maintain than a high-level language; it just takes longer.

But this isn't a product review. This is a celebration of the future, a revel in the end of stodgy programs. Good ideas are contagious, and *NewViews* is sure to be copied and improved upon. Just because an application is mundane or commonplace doesn't mean that its computerization has to be stultifying. *NewViews* is full of lively features, such as *Paradox*-like screen displays, complete with lockable and side-scrollable columns. It also has a BASIC-like procedural language, and simple but

■ FROM THE EDITOR'S SCREEN

powerful custom forms generation. If this kind of thinking works for accounting, consider the potential for all those dental-practice systems, time and billing programs, and other vertical market pack-

ages. One of the biggest obstacles to the more-widespread use of vertical market packages is the need for customization. A program with built-in forms generation and a procedural language is ideal.

VERTICAL BLOCKBUSTER Speaking of vertical packages, we're planning a single-topic issue next year on business-management software. That means typical *PC Magazine* treatment, including benchmark tests and testing scripts. We'll look at the top accounting programs (of which *New-Views* should be an important player), maybe run a year or two's data through them. We'll have a major accounting firm review the results and verify our findings.

Other vertical packages deserve the same treatment. Which would you like to see us attack? Point of sale? Lead tracking and sales management? Time and billing programs? Inventory control? Which ones and why? Let me know via letter or MCI Mail.

Actually, we haven't done too badly by accounting software. For the last couple of years, we've been running the Price Waterhouse Report. We've relied on the expert opinions of Price Waterhouse partner G. William Dauphinais and his cohorts as they checked out major and some not-so-major accounting packages. These stand-alone reviews were adequate for their time. Now it's time for our accounting reviews to become comparative, like the rest of *PC Magazine's* reviews.

The last time I got this excited about accounting software was about 7 years ago, when I helped sell a \$250,000 custom mainframe payroll system to a large corporation for my employer, a consulting firm. Things have changed a lot since then, mostly for the better.

That old dinosaur was several hundred thousand lines of COBOL code, not buggy, but touchy all the same. It required constant supervision and frequent updates and patches. Of course, it could produce paychecks for anyone from itinerant cotton pickers to commissioned salespeople, in a hundred different companies with a thousand different deduction codes. In a sense, it ran on a personal computer—it took nearly the dedicated capacity of IBM's biggest machines to process the big jobs.

Interactivity wasn't an issue. We thought on-screen simulation of a key-punch machine was pretty nifty.

But that was yesterday. Today, personal computers are the lifeblood of small- and medium-sized business accounting. Tomorrow, they'll even be fun to use. ☐

23 out of 24.

The Billion Dollar Club. An elite group that handles the biggest projects in the world.

Last year, according to *Engineering News-Record*, only 24 companies made it.

23 of them use Primavera Project Planner.

Primavera offers the *capability* to handle projects with up to 10,000 activities. Coupled with the *flexibility* provided by features like 20 activity codes per project, choice of I-J or precedence formats, interactive and batch modes for data entry, resource leveling, even on-screen bar charts and histograms.

Not to mention our extensive reporting functions that help you create exception reports, summary reports or selective focus reports at any level of detail.

Send for our \$35 demo and see for yourself.

We're helping 23 top companies manage their projects more effectively. Isn't it time we did the same for you?

"ADVANCED LOGIC SHIPS AT™ COMPATIBLE WITH AN XT™ CLONE PRICE"

Computer Retail News
Monday, July 7, 1986

The newest generation of personal computers are designed and manufactured by **ADVANCED LOGIC RESEARCH, INC.** Heir to all the best traits of its ancestors, the PC2/286 series of personal computers possess total compatibility to past and current hardware and software achievements.

SMARTER DESIGN!

Like all products in the ALR line, the PC2/286 is born with enhancements and the latest technology available. **THE NEXT GENERATION** has speed and power equal to that of the AT™, is as small as the XT™, but the complete system (including graphics video card and high resolution monitor) costs less than both! How? Smarter design! Like we've always said ALR

doesn't design products without improving them beyond what our competition offers.

Smarter design, as well as being superior, is less expensive to manufacture so you pay less.

We've incorporated all the knowledge that the past successes and failures of big manufacturers have afforded and used it to make a better product.

THE NEW STANDARD

The evolutionary PC2/286 brings the power of 80286 (AT) technology into a price range that until now has been the exclusive domain of the PCs. The PC2/286 is destined to be the new standard in a rapidly changing marketplace and is designed to meet the ever increasing needs of today's users.

PERFORMANCE

PC2/286
\$1545.00

- 8 MHz AT compatible 80286-8 CPU
- 2 AT slots, 3 PC slots
- 512 KB RAM standard expandable to 1 MB on board

What's
the
easiest
way
to
fill the
gaps in
your
software
library?

With some Assistants

If you're a perfectly normal PC user, beneath your well-mannered exterior beats a heart that's passionately devoted to two or three programs.

You know them, you love them, you'll never leave them.

Yet somehow, alongside your trusty spreadsheet, word processor or data base, you know a few others would help.

If only you had the time, or money, or both, to invest in them.

Well, you do.

The IBM Assistant Series makes it

easy for you to expand your library.

They're easy to buy, easy to learn, and easy to remember how to use.

Most retail for below \$195. Everything is in plain English and makes plain sense. Help screens and pop-up menus reduce headscratching even for occasional users.

And there's an IBM Assistant for just about every job IBM PCs are doing these days, including some your favorite programs probably can't do.

For managing information, there's

Filing Assistant, a highly flexible data base program. *Reporting Assistant*, for arranging your data in handsome documents, and *Document Retrieval Assistant*, for digging out text files whose names you've forgotten.

For writing, there's *Writing Assistant*, a word processing program so logical that even numbers people like it, and new *DisplayWrite Assistant*, which lets your PC exchange words with other IBM office systems.

Planning Assistant makes number

from IBM.

crunching easier by replacing complex formulas with plain language commands. It's ideal if you need a spreadsheet sometimes, or all the time.

Graphing Assistant™ turns numbers into pie charts, bar charts and line graphs, while *Drawing Assistant*™ turns your PC into a colorful sketchpad for livening up sales presentations or invitations to the company picnic.

For juggling schedules and deadlines, *Project Assistant*™ will help keep you on top of things, and on time.

Mainframe Communication Assistant™ helps link your PC to other PCs, to mainframes and subscription data services. *Voice/Phone Assistant*™ sends recorded messages, and lets you call your PC from touch-tone phones.

The Assistants can also communicate in another helpful way: with each other. They're designed to swap information so that one program's talents can magnify another's.

But no matter how you use them, separately or as a team, you'll find that

they also complement the software you have now.

To learn more about the IBM Assistant Series, visit an Authorized IBM PC Dealer. For the one nearest you, and a free brochure, call 1-800-447-4700. In Alaska, call 1-800-447-0890; in Canada, 1-800-465-6600.

IBM®

Personal Computer Software

The Assistant Series from IBM.

Writing Assistant

IBM Writing Assistant™ does everything from memos to manuscripts, has a built-in spell checker and synonym finder, offers various format options, prints out what you see on the screen, and accepts both graphics and numbers from other Assistant programs.

DisplayWrite Assistant

IBM DisplayWrite Assistant™ is a word processor that's part of the IBM DisplayWrite series, so it can exchange information with other IBM PCs, minis and mainframes. It also accepts files from other Assistant programs, plus Lotus 1-2-3, dBase II* and more.

Filing Assistant

IBM Filing Assistant™ can store and sort from few to thousands of records, up to 32 pages long with 100 fields per page. The data can be transferred to most other Assistant programs. Even performs math calculations. File formats are highly tailorable.

Reporting Assistant

IBM Reporting Assistant™ arranges Filing Assistant records in concise formats. It sets and labels up to 20 columns, numbers pages, performs math, alphabetizes or lists records in numerical order, and merges reports with other Assistant Series documents.

Planning Assistant

IBM Planning Assistant™ gives you fast column and row calculations and consolidations without the usual slow learning process. For a total, you enter TOTAL, not C21+D21+E21+F21, etc. Works as a team with Filing, Graphing and Writing Assistants, plus others.

Project Assistant

IBM Project Assistant™ simplifies complex projects by creating automated "Gantt" bar charts. It can assign individuals or teams to up to 250 separate tasks. Helps you set and track deadlines, and simplifies rescheduling one operation in response to another.

Graphing Assistant

IBM Graphing Assistant™ takes numbers from the keyboard or directly from IBM Filing or Planning Assistant and creates pie charts, bar charts or line graphs that can be included in documents prepared by Writing, Reporting or DisplayWrite Assistant.

Drawing Assistant

IBM Drawing Assistant™ lets you make colorful illustrations, either free-form or with circles or boxes, etc. You can zoom in to retouch details, create "airbrush" effects, add text in several typestyles, then transfer the image for printing in documents.

Document Retrieval Assistant

IBM Document Retrieval Assistant™ is for when you have more files than you can remember. It searches for key words that might be in the file you want, then shows you a list of appropriate file names. Works with most Assistant programs plus many others.

Voice/Phone Assistant

IBM Voice/Phone Assistant™ turns a properly equipped IBM PC[®] into a sophisticated phone answering service. Leaves general messages plus "private" ones for special callers and lets you call in (and make recordings) from any touch-tone phone.

Mainframe Communication Assistant

IBM Mainframe Communication Assistant™ enables a well-connected IBM PC to exchange information with mainframes, other PCs and data services, from office or home. And you don't need high-level technical expertise to make it work. Commands are in English.

IBM Accounting Assistant Series is a separate family of integrated programs that give small business a big edge. All the important accounting functions are included, and sampler sections help you get going quickly.

*Lotus and Lotus 1-2-3 are trademarks of the Lotus Development Corporation. dBase II is a trademark of Ashton-Tate. Requires IBM PC Voice Communications Option.

OMNI-READER™

NOW YOUR COMPUTER CAN READ.
A REVOLUTION IN TAKING WORDS FROM
PAGE TO COMPUTER.

PC MAGAZINE PRODUCT OF '85

WORD PROCESSOR AND COMPUTER COMPATIBILITY.

The OMNI-READER can read text into most word processors, micro and personal computers. It attaches through a Serial RS232C interface as easily as a modem.

TYPEFACE QUALITY.

OMNI-READER has the ability to read letter quality text that has been printed on a letter quality printer or type writer in one of the four following typefaces.

TYPEFACE RECOGNITION.

The OMNI-READER can read four of the most commonly used typefaces: Courier 10, Courier 12, Letter Gothic and Prestige Elite.

MANUAL OPERATION.

Alpha or numeric print is scanned line by line by moving the reading head along the text. Capable of scanning both forwards and backwards, the reading head can be used to input all or selected portions of text.

GUIDE RULE. (pat. applied for)

A specially engineered guide rule makes it easy to align text. Because of the unique clock track, the reading head can be moved at variable speed and still read text. Scan time 2-3 seconds a line.

Each OMNI-READER comes with I.B.M. PC/Compatible or Apple Macintosh software - at no extra charge. Interface Cable available for \$16.⁹⁵ extra. Specify I.B.M. or Macintosh.

90 Day UNCONDITIONAL Replacement
Warranty.

smarTerm[™]

The Communications Software That Knows You Can't Ignore Evolution

The world of computing has much in common with nature: Those who adapt to their environment flourish. Those who can't—go the way of the dinosaur.

If your computing environment includes mini computers, you can access them using standard terminals. But the smarter alternative is an IBM[®] compatible PC[®] and SmarTerm terminal emulation software—an advanced species of communications software.

Persoft began where most terminal emulation software companies strive to end—with exact, feature-for-feature emulation. Then Persoft took SmarTerm software to the next stage of evolution: superiority.

SmarTerm 240, the latest in the SmarTerm series, not only provides the ReGIS[®] and Tektronix[®] graphics capabilities of a DEC[®] VT240[®] terminal, but adds capabilities that are only possible through the power of a PC. Features like error-free data transfer (using Kermit or XMODEM protocols), on-line help screens, remappable keyboard layouts, and programmable softkeys.

SmarTerm 240 is just one example of the most advanced line-up of DEC, Data General and Tektronix terminal emulation software in the industry.

Make the "natural selection." Ask your local dealer about SmarTerm terminal emulation software. Or contact:

■ JOHN C. DVORAK

THE ART OF DISINFORMATION

Despite the smoke screen, if you keep in mind a few simple rules about IBM's modus operandi, you can dope out the style—if not the substance—of its next move.

Disinformation is a word popularized by author/editor Arnaud de Borchgrave to describe carefully selected information purposefully provided to confuse an enemy. The masters of disinformation are the Soviets, says de Borchgrave. I don't think de Borchgrave has ever studied IBM, though. Surely Big Red learned its techniques from Big Blue.

Disinformation isn't the simple telling of a lie for the purpose of deception. Indeed, there may be no lies told. Disinformation is information strewn out in such a way that the seeker of truth is left wandering the backwoods of reality, mumbling to himself.

The goal of disinformation is the fiendish manipulation of thought and opinion. It has supplanted old-fashioned propaganda. (Ad men take note!) The Soviets use it to convince us that they have nothing to do with world unrest and that their foray into Afghanistan is a peacekeeping good-guy mission. IBM (which I hate to compare to the Soviets or the KGB) mostly uses disinformation to disarm competitive strategists who try to outwit IBM.

SUCKER'S GAME It's a sucker's game, though, because outthinking IBM is not hard to do. Just remember that IBM never does anything spectacular or outrageous. Its moves are logical and plodding.

IBM must create a bogeyman image lest the company be predictable to all and possibly considered a laughingstock. Only a few observers (this magazine has a monopoly on them) see through this smoke screen with any consistency.

Unfortunately, more common by far is a Chicken Little-like mentality, determined to ignore the facts. These people are like stock market bulls who illogically think the market will go up forever. They find it interesting to ruminate (and essentially fret) over how IBM is going to do something outrageous or daring. They always conclude that IBM is about to blow everyone away. This plays right into IBM's grand scheme of disinformation.

Thanks to skittish columnists (many of whom can be led to believe anything) and disinformation specialists duped or bought by IBM to spread this garbage, we end up with a barrage of bunk. Combine this with the IBM policy of multiple development, whereby two or three separate teams will work on the same project at once, each with its own leaks. The result: we get what IBM wants us to have—a terribly blurry picture of reality.

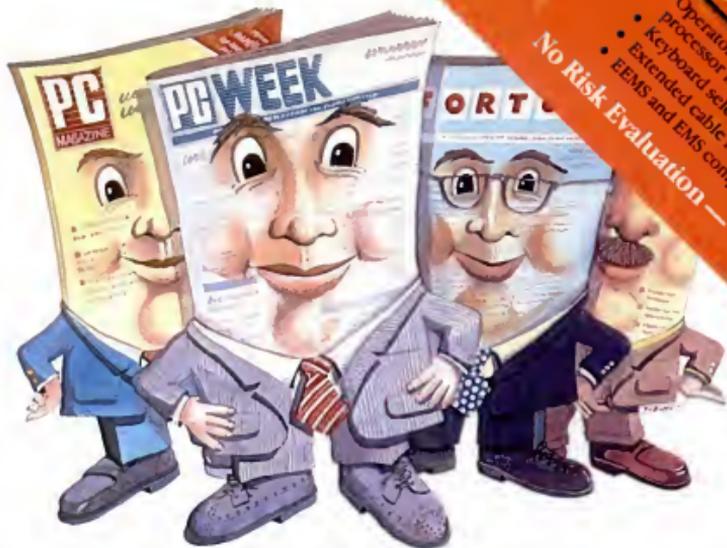

Examples abound. The most outra-

geous surfaced in a weekly trade magazine. A reporter there is certain that the new IBM line contains an on-board PGA (Professional Graphics Adapter). This certainty flies in the face of IBM's near abandonment of the PGA. Worse still, in the same magazine Microsoft has a huge ad begging for software designers for some secretive new software. The ad ended with this emphasis: "Extensive EGA experience desirable." Does this tell you something about an on-board PGA graphics display?

So let's just remember that IBM is consistently unspectacular and we can avoid the obvious blunders. Besides unspectacular products, there is one other curious consistency. While IBM never pushes technology to the limit, it does do a couple of noteworthy things. First of all, it goes with the "best" technology (or what it thinks is the best technology). By best I mean reliable, proven, and available from multiple sources. This usually means middle-performing products. Not as fast as they could be—ever! This rules out rumors about a 24-MHz AT 386, as far as I'm concerned.

SOMETHING SCREWY Finally, IBM always does something 'screwy' with its new products. These gimmicks are, I'm sure, Armonk's idea of "whizbang." Examples are the infrared keyboard on the PCjr, the pop-up disk drives on the Convertible, the DB-9 connector on the AT. Stuff like that. Expect a similar oddball element in the new machines. Don't expect much more.

Enhanced!

- Operator selectable 80,286-80386 processor modes
- Keyboard selectable cache memory
- Extended cable for Compaq® users

INSIDE TRACK

Out of IBM's tangled web comes some spectacularly screwy speculation about its next machine.

It's months like this that make it easy to write a gossip column. Dozens of fellows have called me with "exact details" of the upcoming IBM 80386 machine (see related essay). As I've said before, most of this stuff is **bunk**, but worth repeating. Let's make this the last 80386 speculation column.

One thing surely worth mentioning is an **actual date** a fellow discovered for the rollout—January 13 (or was it 14?). It's possible, I suppose.

I've heard details of **three or four distinct machines**. The funniest is essentially an AT box with an **8-MHz 386 chip**. What a groaner that would be. Another laughable rumor is that IBM is secretly working with **Compaq** to somehow test the waters for an 80386. That will be the day.

Someone else claims to have seen an expensive 80386 Sun-like workstation with an **entirely different bus**. Finally one guy has seen a believable 16-MHz machine with a bus detached from the main PC board (which is surface mounted and can't be flexed). There are two 8-bit slots, two 16-bit slots, and two 32-bit slots and maybe two short 8-bit slots in that one. Another guy saw the same machine with no 8-bit slots.

Geek, it sounds like there are a lot of **oddball prototypes** out there, huh? The only consistent theme is that all of these machines are described as having an **EGA, ports, and both disk controllers** on the main board.

Most observers will be surprised by a January announcement of this thing. Word has it that IBM is still **bickering** internally over the impact of an 80386 machine on its product line. The specific concern is over the impact on the mini-computers. Many think that the Sys-

tem/38 is only good for a few more years. So who cares? The same types say it will **take more pep** than this 386 box to have an impact on the System/38. As this column tries to emphasize, it takes more than mere processor MIPS to qualify as a mini or mainframe. I/O, I/O, it's off to work we go.

The real **head scratcher** in all this speculation is the exact reason for the development of the **screwball XT 286**. One colleague claims that the machine is just a way to get rid of old 6-MHz Level C 80286 chips. In reality those old chips will run fine at 8 MHz and could have been dropped into either model of the AT. And forget about Level C bugs. This is **meaningless**, too, since all the software written specifically for the 80286 accounts for the bugs and assumes everyone uses this chip.

My first explanation for the development of XT 286 was an inventory theory. IBM supposedly has a **warehouseful** of empty PC boxes. Since the PC and PC-XT are **dead**, the XT 286 in this arcane box may keep the **old and clunky** PC-style box moving. Anyway, I've concluded that inventory isn't the issue. So what is the *raison d'être* for the existence of the XT 286?

Two things, one of them cosmetic and thematic. First, IBM wanted to introduce its new BMW-style naming scheme: XT 286. Sounds like a bimmer, doesn't it? **Maybe a Mazda**. Whatever the case, it looks as though IBM is going to differentiate its lines into two groups. One group will be earmarked by 5¼-inch floppy disk drives and be the high-end machines targeted to be dropped on the endless desks of Fortune 500 companies (each of which has a mainframe in the basement). The XT line and the AT line will go there

with new BMW-style names.

Then there are the **clunkers**: the Convertible, the Portable, the ET, and who knows what else. These will all go with **3½-inch disks** and be sold more like personal computers and less like terminals.

These are minor issues, though. The second, real reason for the XT 286 may be more subtle, more **diabolical**, more a function of **IBM paranoia**. The XT 286 may be nothing more than a post-beta test machine for the **new AT ROM** to be shipped with the next AT upgrade. Hear this out.

At this writing it seems that there is over **50K of new (and as yet undocumented) code** in the XT 286. The ROM is dated April 1986 and clearly calls itself an AT when disassembled. IBM isn't going to sell many of these machines (another gaff to the inventory theory), but it will sell enough to get important feedback on the new ROM. It's likely that this new ROM is the **rumored super ROM** with **TopView** and multitasking hooks to be used by Advanced DOS 1.0 (to be called A-DOS, as in A-Team, formerly known as DOS 5.0).

We know that **IBM was irked** over its hard disk problems in the AT and other embarrassments like the dumb 128K RAM chips. So the company is understandably paranoid about its reputation. Don't let anyone think differently.

So IBM brings out this **innocuous machine** with little fanfare and no raves. It's a perfect vehicle to check the new ROM. If it has bugs, it isn't going to cause a stir and surely won't draw much attention to itself. When the time comes to roll out the new gunboats, then IBM will have **bulletproofed** the new ROM and will have one less thing to worry about.

Oh yes, **let's not forget the RT** in this tangled web. Where does it fit in? It's sure a risky investment (groan). I say **kick it good-bye**. Now you know what RT really stands for—**Real Turkey**. ☞

Next Page: Real-life experiences from our customers.

Next Page: Real-life experiences from our customers.

You can eat 37% more carrots.
Or you can get our new VEGA Deluxe™ EGA card.

Three fresh, orange carrots are shown diagonally across the middle of the page. They are slightly out of focus, with the background being a plain, light color.

Despite its improvements over CGA, today's garden-variety Enhanced Graphics Adapter can still be a strain on the eyeballs.

May we introduce you to a sight for sore eyes: the new VEGA Deluxe EGA card. A short-card video adapter that goes beyond standard EGA to bring you as much as 37% higher screen resolution.

In pure pixels, that means 640 x 480. *And* 752 x 410. With as many as 16 on-screen colors from a palette of 64.

That, in turn, means sharper lines. More brilliant colors. And less strain on your eyes.

(Of course, you can't see more than your monitor will display. So for more than 640 x 350, the VEGA Deluxe requires a

...sync* or equivalent.)
The VEGA Deluxe combines our advanced
mount technology with 28% fewer ICs to give
wear build-up and greater reliability. And, it's 100%
compatible with every other video mode: EGA, CGA, Hercules and
VGA. (We guarantee it, or your money back.) It even *automatically*
selects which mode is right for your software's needs.

The VEGA Deluxe is the next in a line of
high-performance EGA cards that have made us
the largest volume IBM-compatible EGA card
manufacturer in the business, with over
100,000 shipped.

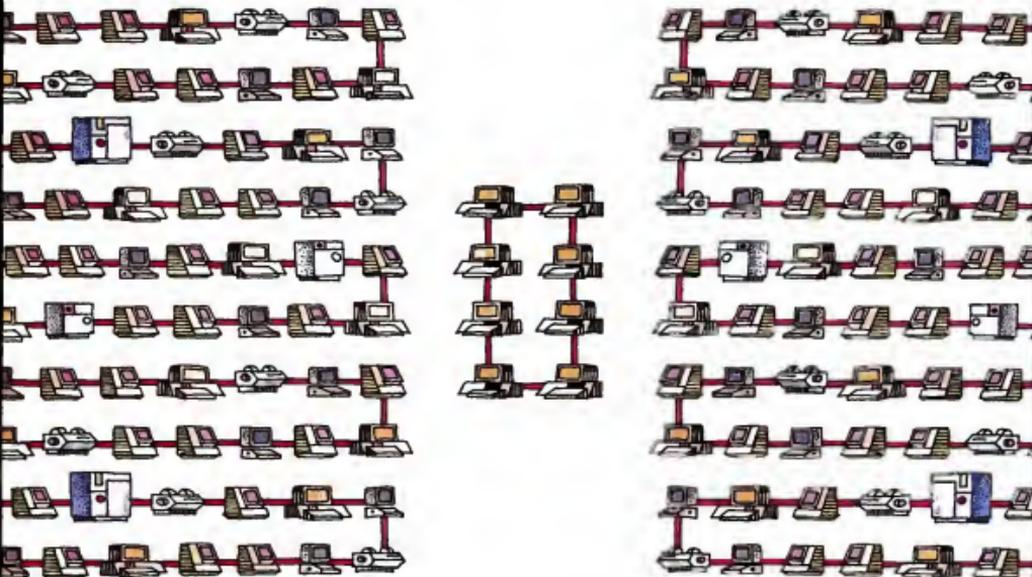

And at only \$599, the new VEGA Deluxe
won't set you back a bunch.

Want more information? Call 1-800-238-0101 for the name of

Peachtree's® Complete Business Accounting System.

The Best Selling Accounting System, Now At A Best Selling Price - \$199

Compare this remarkable business accounting software with systems costing as much as \$5,000. In fact, the Complete Business Accounting System formerly sold for \$4,760. But now, you can get the new, updated, expanded and integrated edition of all 8 modules for the incredibly low price of \$199!

Over 150,000 Satisfied Users— Compare And See Why!

- **Customized To Fit Your Business.** You're free to modify our suggested Chart of Accounts, define your own financial statements and either maintain your own payroll tax files or use our updates.
- **Upgradable To Local Area Network.** An optional module will permit you to use the system on a local area network, to make maximum use of the software.
- **Works With Peachtree Data Query.** With the purchase of PDD, you can quickly transfer your accounting data to the most popular databases and spreadsheets for "what if" analysis.
- **Updates That Keep Your System Current.** Revised accounting and tax information is available to keep you up-to-date year after year.

Very User Friendly. Includes Everything You Need To Get Up To Speed—Fast And Easy.

1. **Quick Start Manual.** Gets you up and running fast with easy installation instructions.
2. **Accounting Primer.** Written by an accounting industry expert, introduces you to accounting concepts.
3. **Reference Library.** Detailed instructions written in plain English thoroughly explain all software functions.

4. **8-Module Software Library.** Separate disks contain all the accounting functions you'll need for your business.
5. **Tutorials.** An in-depth chapter on each module. Sample data included to make learning easier.
6. **Toll Free Support.** InfoWorld Magazine calls our technical support "among the finest in the industry." No unnecessary contracts. Pay only for the time you use.

Simple Yet Comprehensive. Includes All Of The Following Modules:

- General Ledger
- Accounts Receivable
- Accounts Payable
- Sales Invoicing
- Inventory Control
- Fixed Assets
- Job Cost
- And Payroll System—
INCLUDED AT NO
EXTRA CHARGE.

Powerful Features At A Value Price.

- Menu driven installation and operation
- Multi-level password protection
- Supports multiple companies
- Not copy protected
- Control report audit trail for all entry programs

PLUS OUR MONEY BACK GUARANTEE

If you are dissatisfied with a product purchased from us, simply return the complete product to us within 30 days of your purchase in saleable condition and your purchase price will be refunded.

This new system is compatible with data files built with previous versions of Peachtree® Business Accounting Systems including those sold under the IBM name.

LANGUAGES THAT ARE CAUSING THE BIGGEST PROGRAMMING BACKLOG IN HISTORY ARE ALSO EATING NICE BIG HOLES IN OUR POCKETS.

Whether it's BASIC, COBOL, Pascal, "C", or a data base manager, you're being held back.

Held back because the language has frustrating limitations, and the programming environment isn't intuitive enough to keep track of what you're working on.

In the real world, there's pressure to do more impressive work, in less time, and for more clients.

We've been given some incredibly powerful hardware in recent times, but the languages aren't a whole lot better than they were 20 years ago.

So, whatever language you have chosen, by now you feel it's out to get you — because it is.

Sure, no language is perfect, but you have to wonder, "Am I getting all I deserve?"

And, like money, you'll never have enough.

Pretty dismal, huh?

We thought so, too.

So we did something about it.

We call it CLARION™.

You'll call it "incredible."

Distributed on 7 diskettes, CLARION consists of over 200,000 lines of code, taking 3+ years to hone to "world-class" performance.

With CLARION you can write, compile, run and debug complex applications in a New York afternoon.

Even if you're in Savannah.

It gives you the power and speed to create screens, windows and reports of such richness and clarity you would never attempt them with any other language.

Because you would have to write the code.

With CLARION you simply design the screens using our SCREENER utility and then CLARION writes the source code AND compiles it for you in seconds.

Likewise, you can use REPORTER to create reports.

Remember, only CLARION can recompile and display a screen or report layout for modification.

And with no time wasted.

All the power and facilities you need to write great programs, faster than you ever dreamed of.

Programs that are easy to use. Programs that are a pleasure to write.

And to you that means true satisfaction.

You've coveted those nifty pop-up help windows some major applications feature. But you can't afford the time and energy it takes to write them into your programs.

That's the way it used to be.

So we fixed that, too.

CLARION's HELPER is an interactive utility that let's you design the most effective pop-up help screens that you can imagine. And they're "context sensitive," meaning you can have help for every field in your application.

Unlike the other micro languages, CLARION provides declarations, procedures, and functions to process dates, strings, screens, reports, indexed files, DOS files and memory tables.

Imagine making source program changes with the CLARION EDITOR. A single keystroke terminates the EDITOR, loads the COMPILER, compiles the program, loads the PROCESSOR and executes the program. It's that easy!

Our data management capabilities are phenomenal. CLARION files permit any number of composite keys which are updated dynamically.

A file may have as many keys as it needs. Each key may be composed of any fields in any order. And key files are updated whenever the value of the key changes.

Like SCREENER and REPORTER, CLARION's FILER utility also has a piece of the CLARION COMPILER. To create a new file, you name the Source Module. Then you name the Statement Label of a file structure within it.

FILER will also automatically rebuild existing files to match a changed file structure. It creates a new record for every existing record, copying the existing fields and initializing new ones.

Sounds pretty complicated, huh?

Not with CLARION's documentation and on-line help screens. If you are currently competent in BASIC, Pascal or "C" you can be writing CLARION applications in a day. In two days you won't believe the eloquence of your CLARION programs.

Okay, now for the best part of all. You can say it in CLARION for \$295.00—plus shipping and handling. All you need is an IBM® PC, XT, AT or true compatible, with 320 KB of memory, a hard disk drive, and a parallel port. And we'll allow a full 30 day evaluation period. If you're not satisfied with CLARION, simply return it in its original condition for a full refund.

If you're not quite ready to take advantage of this no-risk opportunity, ask for our detailed 16 page color brochure. It vividly illustrates the elegance of CLARION. Consider it a preview of programming in the fast lane.

Either way, the 800 call's a freebie.

■ PETER NORTON

A QUANTUM JUMP IN DESIGNING INTERFACES

Dan Bricklin does it again. After stunning the world with the first electronic spreadsheet, VisiCalc, he now brings forth Demo, a revolutionary tool for designing program interfaces.

Every now and then, and quite coincidentally, ongoing developments in a number of independent fields reach fruition simultaneously. Wherever that happens—in machine technology, chemistry, physics, biotechnology, whatever—the result is invariably a quantum jump in the state of the art. I expect 1987 to witness just such an extension of the leading edge of desktop computing.

The advances are building on many fronts, including graphics and displays, amount of usable address space (where order of magnitude increases are called for), and operating systems that are capable of both integrating the power of all these new developments and presenting it to the user and program developer in an efficient manner. But the most important advancement, to my way of thinking, may very well turn out to be one of the simplest: new and better techniques for designing program interfaces.

QUIRKS AND ECCENTRICITIES Designing an effective interface is not an easy job. When you've designed and written a program, know it inside and out, understand it better than you do yourself—that is precisely when you are in the worst-possible position to develop a decent interface. You know the quirks and eccentricities far too well to recognize them for what they really are. You rationalize clumsy and inefficient operations as necessary ("You'd understand if you knew the program"); what are obviously bugs become "documented" features.

The problem is clear: the premise is

flawed. The time to design the user interface is before the program is written (or at least very early in the design cycle), not after. Surely such an early design won't be static: the capabilities of the program will evolve as it is written, and the interface must change to accommodate them. But having a firm grasp of what the interface should look like and how it should function right from the beginning will go a long way toward guaranteeing that the final program will not just be capable of getting the job done, but of doing it in an efficient, pleasant manner.

With interface design so critical, you'd think there would be a plethora of tools to help the programmer design a good one. Strange to say, up until recently there weren't any.

ENTER BRICKLIN Together with Bob Frankston, Dan Bricklin ignited the micro-computer revolution years ago when he

presented an unsuspecting world with *VisiCalc*, the first electronic spreadsheet. The concept was a natural for a personal computer, and anyone around at that time looking to get into software publishing could only kick themselves for not thinking of such an "obvious" product.

Dan Bricklin must live perched at the apex of a very high hill in the middle of thunderstorm country, because lightning has struck him again: his new interface design and demo program, *Dan Bricklin's Demo Program*, is to my mind every bit as innovative and revolutionary as *VisiCalc* was. Like *VisiCalc*, it's an "obvious" idea that fills a very real (and very important) need. Also like *VisiCalc*, it breaks new ground: this is not only a new product, it's a new class of product.

Up to now, designing interfaces for PC programs was a time-consuming, expensive, and usually frustrating job, sort of a grown-up version of building castles in the air. Pretend (a good choice of words) you are designing a program's interface, pre-*Demo* era. First you will—here's the "airy" part—imagine what you want the interface to look like.

Now think through using the program (more air): Does it look right, does it feel right? Try to anticipate any problems or awkward operations. Two "sciences," intuition and luck, are very useful at this point.

Now write the code that implements your program and interface, and God help you if you discover the interface is awkward or just plain ugly: redesigning it will probably take longer than redoing that part

■ PETER NORTON

of the code that actually does something (are you getting the bias here?). And anyway, who says it's going to be any better the second time? Or the third, or even the fourth? Interface design, I believe, is an

art, and if you're not prepared to add more paint or start over from scratch when you've painted yourself into an insufferable corner, you're never going to be a master.

EASY TALK IS BIG NEWS!

HAYES-COMPATIBLE MODEM NOW AVAILABLE FOR THE IBM PC CONVERTIBLE.

EasyTalk 1200 puts you in contact with the office, sending and receiving data without a hitch. It's what you've needed to enhance the usefulness of the PC Convertible. And did we mention it's available now, today?

EasyTalk 1200 is Hayes-compatible. Not only have we tested the modem extensively, we used our modem to make our modem. Data, including files containing the schematics for EasyTalk

1200, were sent via phone lines between our design facility in Salt Lake City and the production house in Denver. Nary a hitch. It works, and we guarantee it unconditionally.

And it keeps working, with a full two-year warranty on every modem we sell. Megahertz has a well deserved reputation for being user-driven. Spend a few minutes talking with any Megahertz customer and three words keep coming up: support, support, and support.

Come and get it. EasyTalk 1200 has been an instant success among IBM PC Convertible owners, for a lot of good reasons. Join the happy crowd. See your dealer today or call Megahertz toll-free at 1-800-338-8726.

CIRCLE 390 ON READER SERVICE CARD

FANTASY TO REALITY This is where *Dan Bricklin's Demo Program* comes in. Instead of leaving your castle floating in the air, "imagining," "anticipating," "intuiting," and just plain hoping, *Demo* lets you rapidly create real screens that look just like the ones you imagine—right down to the blinking hardware cursor. And just as important, because you can build virtually any number of screens and move between them based on predetermined criteria (pressing one of a number of predetermined keys, awaiting a time-out, and so on), *Demo* lets you actually get the feel of what a finished program will be like. One member of my team, John Socha, used *Demo* to refine certain parts of the interface of the *Norton Commander*, and I admit that more than once I went through several screens in the *Commander* thinking I was using the real thing, before I realized I was actually in the middle of a very complete and realistic demo.

Believe me, potential interface problems show up very vividly and very quickly when going through screens like this, and *Demo* lets you try out solutions just as quickly.

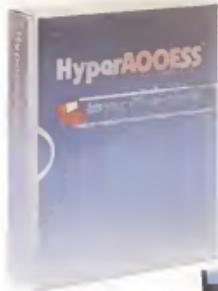

HELPFUL HINTS To help you get a feel for what the program can do, I'll describe some of the tricks I've learned using *Demo*. For those of you intending to use *Demo*, a couple of words about the implementation of the program can save a lot of confusion.

Earlier, I said that *Demo* lets you create a virtually unlimited number of different screens. That was of course poetic license; Bricklin uses the concept of reusable "overlays" to keep down the number of separate screens the program must store (and that you must design).

Having seen *Demo* in use at the office and having breezed quickly through the documentation, when I finally sat down to create screens in *Demo* I assumed I was going to create an overlay or a slide.

Wrong. While the manual doesn't make it clear, there is no functional difference between a slide and an overlay. They are one and the same beast, and the only way they can be differentiated is by the context in which they appear.

Just as with a real slide, you can see through transparent sections of *Demo*

HyperACCESS™

Top Rated Communications Software

Editor's Choice
PC MAGAZINE

October 28, 1986

"An excellent program with many advanced features, including a comprehensive language, unattended host and file transfer capabilities."

Rated #1 by

Computer Ratings Newsletter

September, 1986

"The consistent combination of power/usability ratings put HyperACCESS at the top..."

Rated ■■■■■ by
InfoWorld

July 14, 1986

"It's a snap to start using the program immediately... you can be communicating in a matter of minutes."

Whether you're just beginning to use your PC for communications or you've been frustrated by limitations of another program, HyperACCESS is the answer. Simple for novices. Exhilarating for experts. Ideal for businesses.

There's no initial hurdle. HyperACCESS **adapts itself** to your computer and modem (it dials, redials, and answers more than 40 models). You can use it just by looking at your screen. The manual is crystal clear. A detailed training program is included.

It comes ready to call CompuServe, Dow Jones, EasyLink, MCI Mail, NewsNet, The Source, and others (trial subscriptions included). Learns your passwords the first time you call and enters them for you from then on. You can list more than 100 computers (or people) for instant calling. HyperACCESS logs every call.

Astonishing versatility! Lets you link with systems that defy others. With mainframes, minis, micros, or RS-232C devices. It emulates VT52, VT100/102, TeleVideo 925/950, H19, TTY, Wang, IBM 3101, and IBM 327B asynchronous terminals. It supports up to 19,200 baud and transfers files **FAST** using Kermit, Xmodem (CRC or Checksum), and ASCII Protocols.

HyperACCESS is an outstanding host, too. Even when you're not there, your PC can be accessed by callers who have passwords you've defined. You set whether each caller can read or type messages, transfer files, run programs*, or use your PC without restrictions.

HyperACCESS has the clearest, most complete script language, so you can create custom functions and menus, or automate any portion of a call. And we give you powerful scripts — transfer files between unattended PC's — pick up electronic mail at 2 am — act as a high-security dialback host, and more.

*Certain programs are incompatible with remote use.

HyperACCESS, trademark of Hilgraeve; IBM, PC, XT, AT, TopView, trademarks of International Business Machines; MS, Windows, trademarks of Microsoft; Software Digest, Ratings Newsletter, trademarks of NSTL, Inc.; InfoWorld, publication of CW Communications, Inc.

Even in the midst of communications, HyperACCESS lets you run your other DOS software or use your computer's DOS commands. And HyperACCESS is so well-behaved, it can also run under Windows, TopView, DESQview or DoubleDOS, concurrently with other programs.

Symphony
works
For Everyone

R+D
Spreadsheet
database

you can't
outgrow
it

Symphony* is the one software product no business person can afford to be without. Based on the 1-2-3® spreadsheet technology, Symphony pulls together five key functions in one program. Functions that help a marketing manager work smarter. Give a financial analyst a clearer picture. Run an entire company more effectively.

Symphony is designed to stay ahead of your expanding needs. Its five functions can handle a wide range of business requirements. But should you have more specialized needs, you can incorporate Lotus® add-in products, or any of the more than 250 applications created by independent software developers.

Symphony. Business software you'll never outgrow.

UNLOCK™ Removes Copy Protection

Produces Unprotected Backup Copies

RUNS YOUR SOFTWARE ON ANY HARD DISK

UNlock "copying" disk allows you to make "unprotected" DOS copies of popular original program disks. Unprotected backup copies perform perfectly, as do copies of these copies. UNlock copies run on any hard disk, including Bernoulli Boxes. No original

required in drive "A." Run on a RAM disk simply and conveniently. Also, copy DOS 5 1/4" programs to 3 1/2" diskettes. For IBM® PC, XT, AT, compatibles, 256K or more, DOS 2.1 or higher. Choice of the critics!

Guaranteed to work only with programs below:

UNLOCK™ ALBUM "A" PLUS

\$69.95

(Plus \$4 ship/handling. Foreign orders \$10)

■ PETER NORTON

"slides" to what's underneath. An overlay is simply a slide screen you've created, just like any other; it's an overlay only because you've said it will be automatically placed over (or under) another slide whenever that slide is viewed. (This means that at another time the "overlay" could be a slide, with its own overlays.)

As an example, suppose you're deming a program with a main menu that appears a number of different times—maybe when the program starts, while text is being entered, and when the program is exited. You'd start by creating four slides—one each for what the screen would look like during startup, text entry, and quitting, plus one more slide that is simply the menu itself (parts of the slide not actually occupied by the menu would be transparent). Let's say you've arranged your slides in that order: Opening, Text Entry, Closing, and Menu. By leaping through your slides before defining any overlays, you would see four separate slides: the screen at opening, at text entry, and at quitting, all without the menu, and finally the fourth slide, the menu by itself.

Now here's the trick. Leaf to the first slide and define an overlay for it: make it the fourth slide, Menu. Use Demo's Overlay command to tell Demo that whenever the Opening slide is placed on the projector, Menu will automatically appear above the Opening slide. Menu is now an overlay of the Opening slide, and you'll see the opening screen with a menu on it. (A slide is placed on the projector one of two ways: either you select it manually while developing a slide show, or it is placed on the projector automatically, likely in response to the viewer pressing a certain key while Demo is running a show.) You could also define Menu as an overlay for the third slide, the Closing screen, so Menu will also appear with it. Even though Menu is now an overlay to two different slides, it is still a slide in its own right; you could even designate a slide to appear whenever Menu was placed on the projector, in which case Menu would be an overlay to some slides and would itself have overlays.

By now you must have guessed something I discovered: in addition to being a very valuable and efficient tool with very confusing documentation, Demo is also a heck of a lot of fun to use.

Our Computer Component™ Family Will Support You.

Too often accessory products don't work well together, look out of place and take up too much space at your workstation.

Now, the Computer Component family of products from Computer Accessories Corporation can solve these problems. Styled to blend aesthetically at your workstation, Computer Components add function and control by integrating the following popular accessories.

Power Directors® protect your computer system with superior IEEE Class A and B

power conditioning and are UL Listed. Our Model P15 Expandable Power Director lets you install Computer Component modules neatly into its expansion pocket. This saves desktop space and allows you to expand your system when you're ready.

Data Directors™ connect multiple peripherals to one computer port. The ABC Data Director also allows three computers to share an expensive peripheral, like a laser printer.

Print Saver™ provides you use of your computer while

your printer is printing. This 64K printer buffer is easily upgraded to 256K.

Private Access™ allows you to share your computer system from remote locations with up to 100 authorized users. With fail-safe security and power control built-in, Private Access records who used your system and for how long.

For the family support you need, visit your computer dealer today and ask for Computer Components. Or call (619) 457-5500 for the dealer located nearest you.

The Leader in Computer Components

12MHz SPEED plus A MEGABYTE FOR DOS!

THEY ALL NEED NUMBER SMASHER/ECM™

Turn your PC or XT into the machine it should have been! The 12 MHz Number Smasher/ECM is the fastest accelerator on the market. It is also the most powerful, providing a **true megabyte** for DOS!

To break the 640K DOS barrier MicroWay designed a Memory Management Unit (MMU) that is tailored to DOS plus a 2000 byte resident driver—MegaDOS™. MicroWay calls this breakthrough Extended Conventional Memory. When you type CHKDSK with the board installed, your system will report 1,036,288 bytes total memory and 1,010,016 bytes free! Any conventional DOS program can utilize a full megabyte for data or code without changing a byte.

Downloading a mainframe application? ECM memory runs with any program that uses DOS for screen services including RM and MS FORTRAN and MS and LATTICE CI. This means you have an additional 384K available for oversized applications. Programs which write directly to the screen require a simple patch to adhere to the new standard. MicroWay has already developed patches for the Lotus, WORDSTAR and AUTOCAD screen drivers. Release 1A of 1-2-3 jumps from 535,516 to 916,444 bytes available and runs faster than Release 2 for most worksheets.

Number Smasher/ECM is 100% compatible with all hardware and software including EMS and EGA boards. The compatibility is a result of control: its speed is switch, keyboard or software selectable from 4.77 MHz to 12.0 MHz. Applications which have not been upgraded to ECM can still be run by setting DOS to 640K or 704K and using the memory above DOS for I/O enhancers.

Number Smasher/ECM runs floating point bound programs faster than an AT or any other 80286 based machine. In fact, Number Smasher's 12 MHz 8087 runs a factor of three faster than the standard 80287 on the AT, delivering up to 125 kflops. Software is included for RAM Disk, print spooler, and disk caching, which speeds up floppy and hard disks by a factor of 2 to 10!

Number Smasher/ECM is the most cost effective productivity tool you can buy. The base board which runs at 9.54 MHz comes with 512K and costs only \$599! The complete system which includes a motherboard accelerator, one megabyte of memory and a 12 MHz 8087 is just \$1199. Call today to discuss your particular configuration. Remember: "The advantage of buying from MicroWay is outstanding personal service." (PC Magazine, 6/10/86 - p. 162)

DEBUGGING AI MYTHS

Artificial intelligence has been mired in hype and unrealistic expectations, but expert system and natural-language tools can genuinely make PCs smarter in specific areas.

The "AI shuck" continues. Or at least, the AI confusion.

Few people who understand what artificial intelligence techniques can do to speed up our work, get better answers, and relieve tedium doubt that AI is going to play a central role in the future of computers.

But today AI is getting mired in confusion, hype, unrealistic expectations, sloppy definitions, and holier-than-thou sniping. That's not doing much to develop the kind of well-informed, receptive universe of computer users we'll need in order to tell the AI industry what we expect from it.

BAD LABELING The phrase *artificial intelligence* is itself a lousy place to start. The Brits prefer *intelligent machines*, which comes a lot closer to the reality, but AI is likely to stick on this side of the Atlantic. There's nothing artificial at all, of course, about the kind of reasoning AI tools bring to computational tasks: a well-done expert system applies high-order logic to wend its way through a problem toward a high-probability answer.

Expert systems are just a part of the AI world, but they're the easiest-to-understand example of how AI tools can make our lives easier.

Richard Anders, whose company, JuriSoft, has been specializing in intelligent PC software for lawyers, likes the analogy between expert systems and idiot savants.

You remember the phenomenon of the idiot savant from CBS's "60 Minutes" and elsewhere: individuals who have extraordinary abilities in one special area but

who may be quite ordinary, or even very limited, in their understanding of the rest of the world.

A common manifestation of the idiot savant syndrome is the child who can perform amazing mathematical feats in his head, usually in an instant—telling on what day of the week June 7, 1421, fell, for example, or extracting a square root from a six-digit number—but who has marginal, or worse, social and language skills.

This is a fine metaphor for an expert system: it knows nothing beyond its special area, but it knows that very, very well. DEC uses an expert system to make sure VAX systems are properly configured, solving an extraordinary maze of memory, storage, power, cabling, and other problems to get the right bits and pieces to the customer's door. That system hasn't the slightest idea what a "VAX" is (nor, for that matter, what a "customer" is), but it's

far more accurate than most humans at making sure that the right pieces of the puzzle are fitted together to make a working minicomputer system.

Sounds good—and it is. So good, unfortunately, that software producers are tempted to claim AI credentials for products far removed from intelligence of any sort.

Last year I got so fed up with the hype surrounding AI, and vendors' tendencies to claim there was AI in just about everything they were doing, that I had some stickers printed that I suggested retailers might put on every new software package that came into the store: "Now! New and Improved—with AI Added!"

But that kind of skepticism can be carried too far, and today's backbiting about what is and isn't legitimately AI, especially in PC software, is getting out of hand.

IN PLAIN ENGLISH Natural language interfaces—which allow us to interact with computers in English, a language far more widely understood (if intrinsically clumsier) than any high-level computer language—are important parts of AI, too.

I've often praised and frequently recommended Symantec's Q&A to PC users who don't care much about computers but who do need to do some writing, electronic filing, and list management. While Q&A has very nice and remarkably easy-to-use word-processing and flat-file database-management modules, the magic in the box resides in Q&A's natural-language Intelligent Assistant module.

The Intelligent Assistant allows users to

■ JIM SEYMOUR

throw very mundane English-language (read: natural language) queries at the Q&A database without worrying about field names and syntax. Ask it to "Show me the people here who make more than

\$30,000 a year, have been here for more than 5 years, and haven't had a raise for 2 years," and it'll come back with a precise computer-lingo redefinition of your question, look up the correct answers, and then

present them to you on-screen.

A lot of AI people sniff that Q&A doesn't really use much AI. Phooey. While those folks are caught up in theological arguments about LISP versus PROLOG, Symantec's busy helping people get their work done without having to learn computerese.

In business, that's called "delivering value." It's also called "making money."

I suspect the end to the confusion, hype, and litmus tests over the AI-ismness of products isn't going to come from within the AI community but from within the PC community, as the possibilities and limits of AI become better known to PC users and developers.

TI'S AI CONTRIBUTION Texas Instruments has done more than any other company to educate people about AI, to

■ Texas Instruments has done a lot to educate people about AI and to make AI tools available at reasonable prices.

popularize it, and to make useful AI tools available at reasonable prices.

For some time, TI's offered its *Personal Consultant Plus* expert-system-development package for personal computers. At \$3,000, it sounds expensive for a product aimed at developing PC applications—until you look at the few competitive products, which are priced far higher.

At the American Association for Artificial Intelligence meeting in late summer, TI introduced a new *Personal Consultant Easy* version. It accepts fewer rules and has some limitations—but especially at \$495, it's a genuinely useful tool for developing real applications that use real AI.

The answer to ending the AI stuck-and-jive isn't to keep counting AI angels on the heads of cosmic pins but to use tools such as TI's to develop realistic expert systems that run on PCs and do real work. ☐

Write Right with RightWriter
For Your IBM PC

THE Intelligent Grammar and Style Checker

RightWriter is a new tool to help you produce lean, powerful BUSINESS WRITING. RightWriter uses advanced artificial intelligence technology to flag errors in GRAMMAR, STYLE, USAGE, and PUNCTUATION. RightWriter is the first office automation package aimed at producing better writing, not more writing.

- **Messages are inserted** directly into text to point out possible errors and problem areas.
- **Easy to Use** — only one command to learn, your word processor does the rest.
- **Works with Leading Word Processors** — including WordStar®, Volkswriter®, PFS:write®, MultiMate®, WordPerfect® and others.
- **Readability Index** — measures the reading grade level of the document using the D.O.D. standard Flesch-Kincaid formula.
- **Uncommon Word List** — lists misspelled, slang, and uncommon words.
- **Recommends** — never decides. RightWriter is a writing aid. The final decision is always left to you.

"...RightWriter is an idea whose time is long overdue."

Phil Wiswell — PC Magazine
"RightWriter is an excellent, low-cost, eye-opening software package..."

Inside Word Management
"The documentation is among the best I have seen."

Jim Pile, Soft Sector

Turbocharge Your Pencil!

If you use this...
you need us!

If you draw, design, draft or doodle use Generic CADD 2.0™ to do it better.

Generic CADD 2.0™ Just \$99.95

If you put pencil to paper, then Generic CADD 2.0™ is for you. Any time you have to draw with precision. Any time you have to combine drawings with words, Generic CADD 2.0™ helps you do it quicker, better and easier.

Executives, managers, use Generic CADD 2.0™ for flow charts, graphs, presentations.

Builders, contractors, plumbers, electricians use Generic CADD 2.0™ to make quick work of plans, elevations, details and alterations. And even quicker work of changes!

For the architect, designer or engineer, Generic CADD 2.0™ offers full

CAD capability without costly work stations or hours of study.

To get started just pop in the diskette and you'll be on your way! You'll be up and running in minutes—backed by a manual that's a joy to read and a phone support team who's behind you all the way!

Draw with precision. Draw with ease.

- Draw lines, points, rectangles, polygons, circles, arcs, ellipses.
- Powerful macro commands to turn a sequence into one simple move!
- Move objects, copy, erase, trace, zoom in, zoom out and more.
- Get blinding speed, floating point accuracy.
- Unlimited drawing size.
- The easiest to use text features of any package we know.
- Create symbol libraries.
- Measure distance, angles, area.

Buy only what you can use!

Generic Software offers the only true modular family of CAD products. Add features as you need them.

DotPlot™ Just \$24.95

This is our unique module that lets you reproduce your work on just about any dot matrix printer.

Auto-Convert™ Just \$24.95

Convert AutoCAD™ or Mega-CADD™ drawings to Generic CADD and back again. Add low-cost work stations to your AutoCAD™ set-up!

AutoDimensioning™ Just \$49.95

Speed up your work with automatic dimensions and legends

that change themselves as fast as you can change your mind.

NEW! Drafting Enhancements-1™ (Just \$49.95)

Increase your productivity! Get snaps, trim and extend, fillets and chamfers, double lines, auto filleting, specialized text handling

and many more "power-drafting" features.

Don't go another day without Generic CADD 2.0™. Call our toll free order hot-line today. We'll have Generic CADD in your hands and in just a couple of days.

THE COMPUTER THAT CONQUERED TIME

Finally—a computer that breaks through the barriers of time and space to help you become more *productive*.

The PC's Limited 286¹² runs at a record-setting 12 megahertz, yet it occupies 20% less space than the older, slower "big-name" brand.

For just \$2,695, can you afford *not* to be a "power user"?

The 12-megahertz 286¹² and 10-megahertz 286¹⁰ come complete with 1.2 megabyte floppy disk drive, 1,024K of high-speed RAM, 200-watt power supply and an AT-style keyboard.

Both feature SmartVu™, an alphanumeric LED panel that's a window on your world of computing, a look into the heart of the computer, reporting operating speeds and diagnostic messages in understandable English.

The 286¹⁰ and 286¹² have been created by the best team of computer-hardware designers in the business. A totally new motherboard, custom ROM BIOS and proprietary circuits have been developed for this high-performance computing environment. And every 286¹⁰ and 286¹² is bench-tested and run through an extensive burn-in before shipment.

PC's Limited was the first direct-response marketer to offer high-quality, low-priced PC-AT compatibles. PC's Limited has been a leader in pushing high-performance personal computing through price barriers. The experience gained from selling and supporting thousands of high-performance PCs to customers ranging from Fortune 500 companies to solo users has been applied to designing the most advanced personal computers ever produced: the PC's Limited 286¹⁰ and 286¹².

Naturally, the \$2,295 286¹⁰ and \$2,695 286¹² are backed by PC's Limited's One-Year Limited Warranty, and by our 30-day Money Back Guarantee.

Twelve megahertz or ten megahertz . . . the choice is yours. *In high-performance computing, the choice is clear: PC's Limited.*

PC's Limited Sets a Speed Record.
The 12-MHz 80286 makes the
—\$2,695 286¹² the fastest AT compatible.—

—Joe Desposito, PC Magazine, July, 1986

“More impressive than the speed of the 286¹² is its SmartVu™ panel. . . the 286¹² sports a green, four-segment alphanumeric LED diagnostic readout and a red bar-chart system monitor. During the power-on self-test, the former readout indicates which section of the system is being tested. During operation, it shows the drive letter and track (cylinder number) currently being accessed. It also displays the current clock speed for a few seconds after the clock speed is changed. When an error is found during diagnostics, the diagnostic display shows the full text of the error message, horizontally scrolling like a Times Square news display. Despite the limited size of the display, I found the messages amazingly readable. . .

“Individual users will nevertheless find it a delight—12MHz is a genuinely comfortable speed. In using the PC's Limited 286¹², I was never aware of waiting for the computer to catch up with me. Even overstuffed programs like Microsoft Windows and Word become limber at 12MHz. Running at 12MHz, the 286¹² seemed so natural as to be invisible. The computer became a perfect tool, one that you can forget and get on with the work you're supposed to be doing.”

—Winn L. Rosch, PC Week, June 3, 1986

“The 286¹² is a well-designed machine that offers outstanding performance at a reasonable price.”

—Joe Desposito, PC Magazine, July, 1986

It's time to put your hands on the machine that's making headlines.

Electric Pencil PC

Simply the Best Value in Wordprocessing Today

With as many features as wordprocessors selling for 10 times the price, Electric Pencil PC was designed to be sophisticated enough for the professional user yet simple enough for the beginner. Our "Quick Start Guide" will have you writing, editing, and printing in less than 20 minutes. Once you have the basics, any of 500 functions are available with a simple key-stroke. The on-screen help and extensive tutorial windows are like having a manual on disk.

There may be only two methods left for writing: a no. 2 pencil or the power of Electric Pencil PC. You'll be impressed with this full-featured wordprocessing system at a revolutionary price . . . we guarantee it!

- Supports DOS 2.0 (or higher) directory structure
- On screen underlining & bold with mouse/trackball (color on color monitor)
- Set screen, text, underlined, bold & marker colors
- All prompts in English (no codes or numbers)
- Recover last delete lines out and paste buffer
- Built in disk file recovery
- Definable function keys
- All "wordprocessing keys" are used
- Designed especially for the IBM PC & compatibles
- Definable screen width
- Embedded printer control commands
- Automatic character translation
- Report function
- Chain disk files when printing
- Appended files in memory
- Include files from disk within text
- Verify option with load & exit
- Centering
- Conditional paging and page numbering
- Remark command in text
- Print any part of text or range of pages
- Over 80 individual on line help screens
- DOS or expanded keyboard buffer
- Toggle between menu, alternate text files
- Optional ASCII file save/load
- Parallel & serial drivers (RS-232C)
- "Pause" command in text
- On screen print preview
- Single word spell check
- Customizable dictionary
- Auto-learn & correct misspellings
- Build "specific" dictionaries
- Auto hyphenation, user defined
- Divora, French, German & Spanish keyboard drivers
- Automatic file backup
- Run on floppy or hard disk
- Keyboard macros
- Automatic key entry files
- Simple 1 or 2 key command structures
- Multiple search & replace functions
- User stored auto-file size
- 279 page 2 color manual
- Split screens (up to 6)

- FULLY MENU DRIVEN
- 100,000 WORD DICTIONARY
- EXTENSIVE ON SCREEN TUTORIALS
- NOT COPY PROTECTED
- WORKS WITH ANY PRINTER
- MULTI-LINE HEADERS & FOOTERS
- RE-DEFINE ENTIRE KEYBOARD

■ STEPHEN MANES

UNDERUTILIZATION: NEXT YEAR'S BUZZWORD

Why do software publishers have the blues? You consumers are just not buying that second software program, that's why. But Victor the Venture Capitalist has a solution.

"So what's this hot new item you lured me here for?" I asked Victor the Venture Capitalist across the table of a New York restaurant so tony it didn't even have paper napkins.

Victor pointed to the blowfish roe. "Amazing stuff: you'll love it or you'll drop dead. Maybe both."

"Sounds like some of the software you guys put out," I said. "Stop stalling. What's the scoop? A brand new multiuser system?"

Victor just inhaled some more of the fish eggs.

"A new multitasking system?" I pressed.

"Multi, mate?" snorted the Australian native, with that particular note of smugness reserved for successful businessfolk. "Come now. The only multifarious item most microcomputer users get near is their daily multivitamin capsule. No, quite the opposite. You are about to learn about a phenomenon I have just uncovered. Remember, you heard it here first."

"Full credit will be bestowed if appropriate." I allowed.

"Fine. The software business is in the doldrums, right?"

"So we hear."

"Do you know why?"

I shook my head.

OUT OF THE DOLDRUMS "Underutilization," Victor declared, and raised his index finger. "Say you're in the gasoline business. Say people decide to use their cars solely to drive to work and back instead of to the mall and the supermarket

and their mother-in-law's place and Louie's House of Carp and Filipacchi Falls, the Eighth Wonder of the Wetness World. You, Eddie Exxon, are suddenly in big trouble."

Victor was just getting started. "Say you're in the phone business or the videotape business or the electricity business. You'd be in the soup, wouldn't you, if people never used their phones to schmooze with their friends or never used their VCRs to do anything but tape sumo wrestling matches or never used their ranges to do anything but fix Stovetop Stuffing? And you know what that would represent?"

SINGLE-USE PCS I opened my mouth to reply, but Victor shoved his words in edgewise: "Underutilization, my friend. And it's precisely what has happened in the microcomputer business. My informal surveys show that more than half of Amer-

ica's PCs are being used for one thing and one thing only."

"Namely?"

"Doesn't matter. It's not just one person, one computer—it's one computer, one application. Except for a few power users, the only thing people know how to do with their computers is the one thing they learned when they first got their machines. What's more, plenty of these lost souls don't even know there are other applications available."

"Where'd you come up with this?" I wondered.

"A couple of weeks ago in a drugstore. Ran into an old friend of mine. Said she'd been using the PC and word processing software I recommended for more than a year and a half. Couldn't thank me enough. Her writing career is suddenly blossoming. But what was she in the drugstore buying?"

A \$3.29 pocket calculator, that's what."

I shrugged. "So?"

"So just to make conversation I said something about how nice it is that they're now the size of a credit card and solar-powered so they don't even need batteries. But she said she didn't care because she wasn't going to carry it around with her anyway—she was just going to use it to balance her checkbook. I asked why she didn't get a program to turn her PC into a calculator and a lot more besides."

"Because they cost more than \$3.29?"

Victor shook his head. "Because she didn't know there was one. Naturally, I put her onto our little memory-resident favor-

■ STEPHEN MANES

ite. She thanked me and went her way. I rang her up a couple of weeks later to see how she liked it."

"And?"

"She hadn't even bothered investigating it. She'd stuck with the calculator. Said she remembered how long it took her to learn the word processor. She was petrified at the thought of having to go through it all again. And, of course, the software was a bit pricier than the calculator."

Victor pounced his fist on the table. "Well, she's not alone! There are plenty of people who copy file information off the screen by hand because they have no idea how to sort a directory. There are people who paste spreadsheets together because they don't know how to print them sideways. There are fanatics—power users, no less—who have actually devised macros to turn J-2-3 into a word processor just so they don't have to hassle with a whole new program!"

"Sounds as though you smell business opportunity."

Victor looked manic. "There's a huge untapped market out there! If we could just get people to buy a second program, we could be rich beyond our wildest dreams!" Victor turned somber. "But MicroPro couldn't. Lotus couldn't. Ashton-Tate couldn't. Hell, even Peter Norton couldn't. What will it take?"

"Recreational stuff?" I mused.

"Really! How many people do you know who have the time to learn to land *Flight Simulator* without crashing?"

"Brilliant new applications?"

"Find me the brilliant new people to develop and market them."

"Better, less-intimidating software in the first place?" I suggested.

"How quaintly naive!"

"So what's your solution?"

"We just don't seem to be able to get people to make follow-up purchases no matter what we try. So we're taking a little different approach. We've implemented two new business plans."

"Which are?"

"Plan One: Gouge the hell out of the customer the first time around. After all, it may be our only shot. Tomorrow we introduce our new pricing structure: precisely triple the old one. And that doesn't include our expensive new support package."

"But what if everybody decides to give up on your stuff and go somewhere else?"

"That's where Plan Two comes in. We're hedging our bets. We've just bought out Kalkatronics Co. It's an off-

shore outfit."

"What kind of software do they make?"

"A \$10 clone of our product. Also paper, pencils, and pocket calculators." ☐

Instead of this... ..you can have this

Some Business Software simply can't support your success.

Growth oriented companies thrive on dependable information. Many systems come up short. Some lack performance, flexibility, data integrity, and some even make after-sale-support difficult.

Macola Financial Software is a total business solution. The system matured from a decade of mini-applications and now offers performance for single PC compatible or multi-user LAN environments.

The power is in flexibility—modular yet integrated, with unique reporting capabilities, and easily modified to specific needs (source available).

Accounting • General Ledger • Accounts Receivable • Accounts Payable • Payroll • Fixed Assets/Depreciation

Distribution • Inventory Management • Customer Order Processing • Purchase Order and Receiving

Manufacturing • Bill of Material Processor • Material Requirements Planning • Master Scheduling • Job Costing

If you're serious about business and wish to go on-line once, and only once, with a long term solution, "account" on Macola.

Judge for yourself. For full-featured demonstration programs, detailed information, or the nearest authorized dealer, write Macola, Incorporated, P.O. Box 485, Marion, Ohio 43302-0485.

Or call 1-800-468-0834

MACOLA[™]
FINANCIAL SOFTWARE

*Micro-software's
most powerful solutions.*

Persyst. The wise choice for PC data comm. Take a look!

Persyst's DCP-88 is a PC data comm solution worth eyeing. A front-end processor smart enough to offload comm processing so your PC can sink its claws into your application.

And the DCP-88 works with your IBM-PC, PC/XT, PC-AT, PC/RT or PC-compatible. To turn any PC into a real communications work station—not a way station.

DCP-88's processor keeps your PC working on applications, not protocol overhead. The onboard processor offloads comm overhead, freeing your PC to focus on applications.

Choose from two DCP-88 models—each with a processor poised to swoop into action. The DCP-88/VM with its 4.77 MHz 8088 is capable of handling most applications. Or, for nearly twice the throughput, select the DCP-88/VMX with a 7.16 MHz processor.

Either way, you get a powerful co-processor so your system's comm performance soars.

Dual-ported onboard memory speeds data transfer. With up to 512 KB memory, the DCP-88 has more than enough capacity to handle the most sophisticated comm applications.

And the board's dual ported memory architecture allows data to pass directly between processors at memory speed—so communications fly through your system.

Multiple lines and protocols for a multitude of applications. Adaptable as it is wise, the DCP-88 blends into your comm environment. With up to four serial ports, for example, you can tie to multiple hosts or PCs. Plus, the DCP-88 fully supports asynch, bisynch, SDLC and HDLC protocols so your system's smart enough for any application.

Supports printers up to 1200 lpm. The DCP-88 spans all your comm needs, providing high speed printer support via its optional parallel port. Up to 600 lpm on the DCP-88/VM and 1200 lpm on the DCP-88/VMX.

So don't let your PC comm stick your out on a limb. Not when the solution is staring you in the face. Call or write Persyst for a complete look at our DCP-88 line.

IBM, PC, PC/XT and PC-AT are registered trademarks of International Business Machines
IBM is a registered trademark of Intel Corporation.

In the new world of the IBM Token-Ring network it's nice to see an old familiar face.

The Token-Ring LAN is a reality. It shouldn't surprise you that IBM[®] was the company that developed it. It should be equally unsurprising that the technology that best allows the Token-Ring to communicate with the mainframe comes from DCA, the makers of IRMA.[™]

Introducing IRMALAN.[™]

IRMALAN is a new family of software and hardware products that can exploit the full power of PCs on the Token-Ring and other

NETBIOS-compatible LANs: IRMALAN SNA Workstation[™] is software that provides the PC with the 3270 functionality of IRMA; IRMALAN APA Graphics Workstation[™] is the only software that not only offers that same IRMA functionality and power but can display mainframe graphics on the PC too.

The IRMALAN family includes gateways that connect Token-Ring networks to both DFT controllers and SDLC communication lines.

Best of all, IRMALAN can do all that with the ease and simplicity of IRMA. Which means your users can feel as comfortable working with IRMALAN now as they have been working with IRMA.

To find out more about DCA's IRMALAN, call us today at 1-800-241-IRMA, ext. 518.

FreeStyle comes as two powerful portables priced right: KeyStyle80 and WriteStyle.

Introducing FreeStyle. The portable word processing system that keeps you a step ahead.

KeyStyle80. The flip top portable with powerful utilities. KeyStyle80 weighs just 3 lbs., but it's loaded with features: a full 83-key keyboard with that mechanical touch typists prefer, a flip top 80 character by 8 line LCD screen, and built-in word processing software.

With KeyStyle80 you can write and store letters and memos whenever you're on the go. Plus there's a built-in calculator and clock/calendar to make your work easier. There's a modem option so you can communicate with remote

systems. A special keyboard cable so you can plug into other PCs (like Datavue or IBM PC) to upload and download files. And, since KeyStyle80 is a stand-alone computer with infrared sensor, you can use it alone or as the keyboard for your Datavue.

WriteStyle. Letter quality printing in a sleek 6 lb. case. WriteStyle delivers great-looking true letter quality printing and works perfectly with KeyStyle80 or any personal computer with a parallel printer port. Small and quiet with an

interchangeable daisy wheel print head, WriteStyle is the best value around in letter quality printers. WriteStyle works off a regular AC power outlet, or it can run off an internal battery.

Take a look at our FreeStyle system today. It's an easy way to move ahead fast. For more information, contact us at One Meca Way, Norcross, GA 30093-2919; (404) 564-5668.

■ STEWART ALSOP

LOSING SLEEP OVER DOS SHELLS

So many programs are dedicated to making DOS easy for unsophisticated users that we all end up more confused than ever. Why didn't IBM do it right in the first place?

In case you hadn't noticed, much of the software development effort in the PC industry goes into making software easy to use (what used to be called user friendly). Much of that effort is spent on getting applications to do many of the functions of the operating system, so that you don't need to quit to copy files or delete them. The most visible part of that effort, though, goes into so-called DOS shells: programs that do the same things as the operating system but do them in such a way that dumb users like you and I needn't be troubled by such commands as COPY or FORMAT.

I've been troubled by DOS shells for some time. (The life of a columnist is rough, spending nights awake worrying about DOS shells and user friendliness.) I have a bunch of shells sitting on my software shelves: *The Norton Commander*, the ever-popular *1 DIR*, *Scout*, *XTREE*, not to mention such aggressive shells (or operating environments) as *Microsoft Windows*, *GEM*, *DESQview*, *Mondrian*, and IBM's own *TopView*. I kept thinking that since there are so many of these products, there must be something significant about them. (That's a common malady of industry watchers: they think lots of products must mean that the products are important. Actually, it just means that programmers think they are important, which is an entirely different matter.)

WHY HIDE DOS? "Why is it that software developers spend so much of their time writing programs that hide DOS?" I kept asking myself at two in the morning.

Then the answer came to me in a blinding flash: because IBM messed up.

It's hard to say that a company that has managed to sell more than 3 million computers in 5 years, that helped create an industry that has sold another 2 million or so compatible computers, and that has set many of the standards for the industry messed up.

But IBM did mess up. In its haste to get a computer on the market, IBM forgot to create a vision of what personal computers should be and how the user should interact with them. Everybody knows the story of how IBM took just a year to put together the first PC, mostly out of other companies' parts: Intel's microprocessor, Microsoft's operating system, Epson's printer, Tandon's disk drives, and so forth. As a strategy, IBM's approach was much heralded as beneficial: it allowed other companies to participate in its success and gave consumers a wide choice.

JUG WINES The PC is to personal computers what 1-liter bottles of Gallo red wine are to wines: sort of an everyman's computer. Like Gallo wine, the PC is widely available and reasonably priced, and it's easy to understand. But it makes no statement. As a result, every programmer who comes along is allowed to believe that he has a better user interface, whether he is trying to make an application easier to understand or thinks he can make the computer itself easier.

One programmer thinks it's better that we dumb users get an easy way to see how our directories are structured so we know where we are and where our files are. Another thinks we should get an easy way to make batch files that look like pop-up menus. Another thinks DOS stinks and adds new commands that let us do things to our files that DOS never intended. Yet another believes we shouldn't ever see DOS and gives us a way to switch between programs without issuing commands.

As far as I'm concerned, they are all wrong. They're wrong because none of them can decide for me what's best. And I don't have time to remember which shell gives me which features for each situation I might run into. And the net result is that I end up sticking with DOS, unable to remember where I am on the hard disk, unable to remember which batch command does what I really want to do, and unable to remember the correct phrasing for some DOS commands.

My real question is, "Where does IBM stand in all this debate about what's best for our dumb users?" It's been 5 years now

■ STEWART ALSOP

since the PC was introduced, plenty of time for IBM to make up its mind about how it feels. And yet all we've gotten from the company is a 256K program called *TopView* that barely manages to give us

more features than the operating system itself, takes up nearly half our available memory to do so, and supports some weird bank-switching scheme for using extended memory that no applications support.

THREE GOALS Earlier this year, the executive in charge of IBM's personal computer division (called Entry Systems Division, which probably means that IBM thinks PCs are just a good way to get people started on their way to an IBM mainframe) said that the company had three primary objectives. The first two were to fix the operating system to allow 286-based PCs to use more than 640K of memory and to allow multitasking. The third was to develop a graphical user interface for its computers.

In the 9 months since then, the company has introduced three new computers—the RT PC, the PC Convertible, and the PC-XT Model 286—and a slightly improved version of *TopView*, but no graphical interface. So what gives? What does IBM stand for when it comes to computers? IBM is the biggest computer company

■ Like Gallo wine, the PC is widely available, reasonably priced, and easy to understand.

in the world. It is the most profitable company in the country. I for one would like to see it stand up and be counted. That way I wouldn't have to lie awake at night worrying about DOS shells.

What really worries me is that IBM has already made its statement about personal computers: that it believes DOS is the ultimate way for dumb users to deal with a computer. Personal computers are, after all, merely a new and intriguing way to make terminals for mainframe computers. Indeed, personal computers are such neat terminals that they increase demand for mainframe processing power, thereby creating a bigger market for the big computers. And you certainly wouldn't want to stick a lot of code in the PC's memory that would just get in the way of hooking into a mainframe. I'm not just lying awake anymore; now I'm beginning to have nightmares about DOS shells.

NEW PRODUCT

Multiply Your PC

...Share it!

Share the computing power of your single IBM PC (or true compatible). Connect it with the new PC Buddy System to multiple screens and keyboards. Why buy extra PCs or a network? The PC Buddy System may be all you need. More PC power — and money saved! No special cards, extra software, or additional memory required. Runs all software. Easy to install, simple to use

Conroy-LaPointe Inc.

Since 1978

"The name says it all."

Conroy-LaPointe XT/Model 1 \$475

IBM PC/XT Compatible

- 256K Expandable to 640K On Motherboard
- 360K Floppy Drive
- 8 Expansion Slots (6 long, 2 short)
- Enhanced AT Style Keyboard
- MS-DOS 3.11
- Macro Assembler
- FCC Class B and UL Approved
- Limited Warranty: 1 Year Parts, 90 Days Labor

With 640K, Mono Graphics Card, Monitor Above System with 20Mb Hard Disk **\$649 \$1075**

XT/Model 2 Turbo \$595

Dual Speed 4.77 & 8.0 Mhz Processor

- 256K Expandable to 640K On Motherboard
- 360K Floppy Drive
- 8 Expansion Slots (6 long, 2 short)
- Enhanced AT Style Keyboard
- MS-DOS 3.11
- Macro Assembler
- FCC Class B and UL Approved
- Limited Warranty: 1 Year Parts, 90 Days Labor

Installed Options (for Model 1 and 2)

Graphics Card & Monitor	\$175
640K RAM (from 256K)	\$55
360K Floppy Drive	\$95

NO MORE PHONEY BALONEY

Introducing Hot Line™

They make baloney by chopping together a lot of cheap junk. Until now, they've made telephone software the same way.

You know the programs: they're *supposed* to store your telephone numbers and dial your calls. But most of them choke if you have more than a few dozen numbers.

Hot Line is different. It can store thousands of numbers—and it can find and dial any number instantly. With **Hot Line**, you can distribute your entire corporate directory on one floppy disk. And that's not all:

Hot Line comes with a built-in version of our *National Directory*. It puts more than 2,000 important firms and government agencies inside your PC. Fortune 500 companies. Major airline, hotel, and car rental numbers. Delivery services. Toll-free 800- numbers. Even computer service numbers. You can dial any number with a single keystroke. And every time you use **Hot Line** instead of calling Directory Assistance, you save as much as 75 cents.

Electronic National Directory
Hot Line contains an electronic directory of more than 2,000 important telephone listings.

Hot Line has a built-in directory of thousands of cities. Want to know the area code for Dallas, Texas? Or Dallas, Oregon? Or Tokyo? **Hot Line** provides the area code and the local time. It even dials Directory Assistance for you.

Hot Line is smart. Do you use a database? Point to any phone number on your screen, press a key, and **Hot Line** dials it. It understands long-distance dialing. And it keeps a log of your calls.

Hot Line is friendly. Because it's memory resident, you can use it any time, no matter what other programs you're running. It dials with modems for the IBM® PC, AT, and compatibles. You control it all with a simple, pull-down menu. It's a power tool for your telephone.

What's the price for all this? Our introductory offer is just **\$29.95!** You see, we publish *The National Directory of Addresses and Telephone Numbers*—America's most popular national telephone directory. Why are we asking **\$29.95** when other firms are charging much more for much less?

Don't ask us. Ask them.

CIRCLE 371 ON READER SERVICE CARD

**NOT COPY PROTECTED
30-DAY MONEY-BACK GUARANTEE.**

Please send me 1 copy of Hot Line at \$29.95 each plus \$2.00 shipping (\$12 outside U.S. and Canada). Washington Residents add \$2.40 sales tax.

CONNECTIVITY

LANs and Beyond

Connectivity is one of the hottest topics of 1986. But while LANs and other schemes for connecting PCs offer many benefits, don't imagine that they provide simple solutions. With this issue, PC Magazine kicks off a series of reports that will give you the hard data you need to cut through the connectivity hype.

So many years have been hailed as "The Year of the LAN" that the label seems more a curse than a description. This year's buzzword is *connectivity*—but this time, technological developments and new products are backing up the buzzword.

What products, for example, are getting the biggest and splashiest displays at large computer shows like Comdex? Invariably, it's a local area network (LAN) or some other system for interconnecting computers.

And look at the sales figures. According to Future Computing,

TALES OF MANY LANs

Why does a company or a university choose one LAN over another? Five installations detail their decisions.

Local area networks have emerged from their brawling and turbulent adolescence into the mature world of applications. In pursuit of the perfect network, purchasers weigh a multitude of factors. They decide among a large and often confusing array of software and hardware products and must become versed in both data communications and operating systems theory. Without keen planning, today's perfect network ultimately becomes tomorrow's albatross.

What motivates a user to give up the safety of the single-system PC and explore virtually uncharted LAN territory? Is it the promise of improved productivity, release from the shackles of the MIS mainframes? Is it the lure of shared equipment, shared data, simplification of software distribution, or just plain curiosity that drives the user to seek interconnectivity? Users from all types of installations say it's "some from column A, some from column B."

A SMALL NETWORK At the Center for Advanced Professional Education in Santa Ana, California, LAN users share a database as well as programs and hardware, such as modems and printers.

When installing the network, the Center learned that networks often must go through several generations of tweaking and revisions, says Rick Watkins of Micro Development, the consulting firm that installed a small five-node LAN for the Center.

Watkins began with Orchid Technology's PCNET LAN, running a version of *dBASE II* customized to do file locking, and progressed to 3Com's Ethernet. In both cases, as the number of database directories grew, the networks' performance deteriorated. Finally, he settled on Gateway Communications' G/NET, mainly for its good vendor support and low price.

He gives credit for the system's im-

proved performance, however, to software. Watkins chose Novell's *Advanced NetWare* for features that solved some problems he was having with this application. "Using standard software we would need to lock an entire file while we ran a report," says Watkins. *Advanced NetWare's* file-locking system allows you to read the file even when you can't write to it.

Applications software also offered solutions. Watkins converted the original *dBASE* files to *dBMAN-Net*, a superset of *dBASE III Plus* that uses record locking as opposed to file locking. He then merged the huge collection of small database files into one monolithic file. Because the database management system package can now avoid constantly accessing small files on the server, it achieves five to six times higher performance.

UNIVERSITY USE Robert Craig from McGill University believes the best reason to use a LAN is to share data. In the Cardiology Lab at McGill, there is an EKG database and a Catheter database. With the LAN in place, all members of the lab can share these databases.

When Craig was asked to select a LAN for the university, he started with the software. Craig feels that the network operating system supplied by many hardware vendors with their networks is "of questionable utility." So Craig started with Novell's *NerWare*, which is widely recognized for its excellence and which comes in many versions that run on many different networking hardware products.

"Novell's hardware-independent approach allowed me to fully research hardware alternatives and to use a very rigorous set of evaluation criteria for selecting a network," recalls Craig. Today, McGill has six of Standard Microsystems Corp.'s ARCnet LANs and Proteon's ProNET-10 LANs, which

each support from 4 to 20 workstations. These LANs are used in administrative, research, and instructional areas of the university.

For the Medical Department of MIT—an ambulatory care center, hospital, and HMO facility for the MIT community—cost and dismal response time were motivating factors for leaving the mainframe environment and looking at LANs. MIT uses its 50-node LAN to allow users to share a large database of insurance records, medical records, patient histories, and other records. In addition, the university saved money by purchasing a LAN because it could buy barebones workstations; the PCs have one floppy disk drive per machine and don't need local hard disks or clocks.

On a recommendation from a consultant, the department chose Proteon's ProNET-10 in conjunction with a Novell server. The ProNET-10 was chosen because it was fast, was token-ring compatible, and was able to run on more types of cabling than other networks. "We felt that token-ring would be the wave of the future even though IBM itself wasn't going that way at the time," recalls Alison Knott, manager of information systems for MIT's Medical Department.

CORPORATE COMMUNICATIONS

In a large corporation, different departments may have dissimilar reasons for choosing a LAN. Since 1984, Walter Horowitz of Dun & Bradstreet Computing Services in Wilton, Connecticut, has been tracking the growing pains that several business units of D&B Computing Services had with different LANs, including IBM Corp.'s PC Network and Gateway Communication's G/NET.

Horowitz says that the group that chose the PC Network did so because it developed software for PCs and, thinking about the future, wanted to learn about LAN technology. They chose

IBM's LAN because they felt it would gain a great deal of market support. In using the LAN, this group found that as it wrote and stored increasing amounts of code on the LAN and the number of users grew, the server response time for the PC Network degraded. They solved the problem with Novell software, one of the few mature network products available. "Now we use the IBM PC Network hardware but not the software," reports Horowitz, who is delighted with the fact that the software has increased network speed at least fivefold.

Another D&B department, which needed to perform 3278 emulation and to hook into large public networks using the X.25 standard, chose G/NET because Gateway Communications manufactures a number of gateway products that allow the network to interface to other communications systems. "We were somewhat uncomfortable using a nonstandard LAN from a very small company," says Horowitz, "but even if the Gateway network didn't work out, the network interface board was the only unique piece of hardware, so we could easily replace the network."

At Shearson Lehman Brothers in New York, sharing and exchanging ideas and information was an important reason to install a network. The LAN's "chat" feature, which lets users send messages to each other in real-time over the LAN, allows LAN users at the company to brainstorm to their hearts' content. Although saving money wasn't the primary motivation for networking, Shearson Lehman saves money on desktop PCs because the LAN allows PCs to share hard disks and modems.

Another of Shearson Lehman's reasons for networking was control. "We have about 200 PCs installed in our division," says Jude Gartland, a senior vice president of the Investment Bankers Division of the company. "Keeping track

of who has what software and who has access to what data gets complicated. We wanted to control the PC environment."

Shearson Lehman's choice of networks, however, was determined in part by matters beyond its control. "We're in a brand new building," explains Gartland. "And the building was already wired with IBM cabling, so the company chose to install Proteon's ProNET-10 because it could use the installed wiring."

FUTURE PLANS Planners and implementers of LANs keep one foot firmly planted in today's working system while the other is leaping toward expansion and interconnectivity. "Within the next calendar quarter we'll have all 200 stations in our investment banking division networked," says Gartland. Shearson Lehman is also investigating gateways and bridges to both mainframes and minis.

At Dun & Bradstreet there is talk of expanding to a 1,000-node network, but a large network can create its own set of problems. "When you only have 20 nodes and someone has a problem, you can simply walk around and find it. But if you have 1,000 nodes and some large segment goes down, the task of identifying the cause is magnified and the consequences become more serious," says Horowitz.

MIT is planning to connect its systems using Proteon's network as the main spine. The Medical Department at MIT will "fit right in" to the larger network.

To sum up these plans for networking's future, you can see LAN managers won't have it easy. Give a user a small LAN and the next thing you know . . . you're managing a 200-node network.—**Robin Raskin**

Robin Raskin is a frequent contributor to PC Magazine.

■ What products get the biggest and splashiest displays at large computer shows like Comdex? Invariably, LANs and other systems for interconnecting computers.

more than 400,000 local area network interface cards were sold in 1985, and more than a million cards will be sold by the end of 1986. International Data Corp. estimates that in the next 3 years, 10 percent of all PCs will be connected to networks. Other sources project an installed base of 35 million PCs in 1990, which implies a growth rate of a million new networked stations a year.

The primary reason for the spurt in network hardware sales is newly available software. NETBIOS and the DOS 3.1 file- and record-locking standards, introduced in the fall of 1984, have paved the way for networking and applications software programmers to develop software tailored to take advantage of the LAN's file- and record-sharing capabilities. Communications gateways, another development that has spurred the LAN proliferation, let networked PCs talk to a mainframe. Apart from these developments, users are still motivated by the traditional reasons for networking: namely, a convenient way to exchange files and share equipment—such as hard disks and expensive printers—while keeping their computer's local processing power.

Although networking has become easier and more productive, don't imagine that it's a simple solution. Because LAN software and hardware are intimately interwoven with a computer's operating system and interrupt hardware, potential incompatibility and conflicts lurk on many levels. Some networking cards don't get along with certain video boards; some

■ Systems administrators will often resort to unplugging and replugging cards, cables, and connectors network wide to trace a problem to its source.

networking software refuses to coexist with RAM-resident programs; and some processors grind to a halt under network load. Finding what causes such a problem is excruciatingly difficult. Systems administrators will often resort to unplugging and replugging cards, cables, and connectors network wide to trace a problem to its source. Moreover, the entire LAN industry lacks adequate network status reporting capabilities that could help you make the most of your LAN.

COMMITMENT TO CONNECTIVITY

If you need to connect PCs, you need plenty of solid information. Anticipating your questions, *PC Magazine* has made a commitment to increasing its in-depth coverage of PC networking systems.

With this issue, *PC Magazine* kicks off a series of reports on LANs and other computer interconnection systems. Since networking is so complex, we'll start by introducing some of the basics, such as the components of a LAN and the function and importance of networking software.

Simple circuit-switching systems that let you share files and peripherals as well as powerful, expensive mainframe systems with multiuser capabilities can be alternatives to a local area network. In "An Overview of Networking Options," in this issue, we spell out what these systems are, in what circumstances you might choose one, and how they make their PC connections.

Since May of this year, several technicians from PC Labs have been busily eval-

GLOSSARY OF NETWORKING TERMS

Baseband A network that transmits signals as pulse rather than as variations in a carrier signal.

Bridge A connection between two or more similar networks.

Broadband A network that carries information riding on carrier waves rather than directly as pulses, providing greater capacity at the cost of higher complexity.

Broadcast To send a message to all stations or an entire class of stations connected to the network.

Bus A network arrangement in which one channel runs to all nodes on the network and each node must recognize which messages are addressed to it. Similarly, because all stations on a bus use the same channel to transmit, a bus system needs some form of arbitration to determine which station uses the channel when several nodes have messages.

Carrier sense multiple access with collision avoidance (CSMA/CA) A method of regulating network transmissions that has each station listen just before transmitting to make sure no other station on the network is transmitting, then send its message. If two stations start transmitting at the same time, the resulting data will be garbled, but the sender will know to retransmit when it fails to get a positive acknowledgment of its message.

Carrier sense multiple access with collision detection (CSMA/CD) A method of regulating network transmissions that has each station listen both before transmitting to see if the line is free and also during transmission to see if multiple stations have attempted to transmit at once. If a collision does occur, each station backs off for a small random interval before trying again.

Carrier signal A tone or radio signal upon which data rides.

Channel A path between sender and receiver that carries one stream of information (a two-way path is a circuit).

Coax, or coaxial cable A communications cable made of a center conductor

surrounded by a shield or braid.

Collision An attempt by two units to send a message at one time on a single channel. In some networks, the detection of a collision causes all senders to stop transmissions, while in others the collision is noticed when the receiving station fails to acknowledge the data.

Fault A physical or logical break in a communications link.

File lock A software procedure that prevents a second process or user from accessing a file while it is already in use.

Gateway A connection between two dissimilar networks. Typically, the gateway is a box or card with cables coming in from both networks. Logically, the gateway takes messages, strips each transmission down to a level in which the systems are the same, and then builds up the message in the form needed by the system receiving them.

IEEE 802 A set of standards for the physical and electrical connections for local area networks developed by the IEEE (Institute of Electrical and Electronic Engineers).

Local Programs, files, peripherals, and computational power accessed directly in the user's own machine rather than through the network.

Local area network (LAN) Connected computers in the same building.

NETBIOS A set of utilities that send data to and receive data from the network adapter cards.

Network A continuing connection between two or more computers that facilitates sharing of files and resources.

Node A connection or switching point in a network.

Open Systems Interconnection (OSI) reference model A model for networks developed by the International Standards Organization, dividing the network functions into seven connected layers. Each layer builds on the services provided by those under it.

Protocol A set of rules for exchanging

information over a computer network.

Record locking The exclusion of other users from accessing (or sometimes just from writing to) a record in a file while a first user is accessing that record.

Redirector A set of software routines that route requests from user programs to resources provided over the network.

Ring A network connection method that routes messages through each station on the network in turn. Most ring networks use a token-passing protocol, which allows the station to put a message on the network when it receives a special bit pattern.

Server A station on a network that handles special chores, such as disk storage, printing, or communications.

Star A network connection method that brings all links to a central node.

Tap A connector that couples to a cable without blocking the passage of signals down the cable.

Token ring A type of network that connects stations so messages pass through each station in turn, and that uses a special circulating bit pattern to tell stations when they can put a message on the network.

Topology The arrangement of pathways in a network. The most common are rings (where messages pass through each station in turn), stars (where messages pass through a central node), and bus (where each message is presented to all nodes).

Twisted-pair The ordinary wire pairs used for some networks and for telephone lines, usually made up of two wires that have been partially wrapped around each other. Twisted-pair is easier to work with than coax cable but cannot support as high a data rate.

Wide area network These networks connect computers over areas as wide as the entire world.—**Steve Rosenthal**

Steve Rosenthal is a free-lance writer based in Berkeley, California.

uating and testing local area network systems. This issue offers in-depth evaluations and benchmark tests of six LANs: Proteon's ProNET-10, Novell's NetWare/S-Net, Standard Microsystems Corp.'s ARCnet, AT&T Information Systems' StarLAN, Gateway Communications' G/NET, and Texas Instruments' Business-Pro LAN Server.

Since all these products were tested running under Novell's networking software, which is one of the most popular packages, you'll find a review of that as well in "Making Connections: LANs Under NetWare." Reviews of other networking systems running networking software from other vendors will appear in subsequent issues of *PC Magazine*, as will updates on other types of connecting products for PCs.

No one can deny that LANs are a complicated subject. If you need more grounding in the details, read on for a brief description of what components make up a LAN and what each is likely to cost. If you're already a LAN system administrator or power user looking for product-specific guidance, skip on to the reviews.

THE LAN PUZZLE A local area network for personal computers comprises several key pieces: workstations, servers, networking software, media (usually wire), and network interfaces. The way the pieces hook up physically is called the *topology* of the network. The electrical connection is made through the *protocol*.

You can buy the pieces from different suppliers and put them together yourself, or you can buy a packaged deal from a single vendor. New standards for networking software and alternative sources of hardware make the idea of putting a network together from parts more practical and appealing than ever before.

WORKSTATIONS Most people use a personal computer as a workstation. However, some companies market less-expensive workstations designed specifically for networking; these have a processor that's able to run PC software, but they lack the disk drives or communications ports needed for standalone computing.

A LAN workstation runs applications software on its own processor using its

own RAM but can store program and data files elsewhere on the network. In contrast, mini and mainframe systems run programs in shared central memory.

SERVERS The network file server's primary mission is to store program and data files. But you can also make it function as a print server by attaching one or more printers, or as a communications server by using its serial ports for communicating via modem. Alternatively, you can dedicate separate machines to the print and communications server functions.

The server is usually an IBM PC AT or compatible, but companies such as Novell, Quadram, and 3Com also make machines that are especially designed for the server role. The server must have one or more fast hard disk drives and a processor capable of handling a heavy communications workload. An adequate server can cost as little as \$2,500; high-end servers go for over \$15,000.

NETWORKING SOFTWARE The file server runs a series of programs known collectively as the *networking software*. The networking software's primary functions are moving data between the network and disk drives, controlling data access and file- or record-sharing, and managing security. Networking software can also include such features as electronic mail and network diagnostics.

Networking software packages range in price from \$125 (AT&T) to over \$1,500 (Novell), but the features offered for the money vary widely. Since the software is such an important consideration, we've covered it more thoroughly in a separate article (see "A Software Key to LANs").

NETWORK MEDIA The *media* connects the file server, on which the networking software runs, to the network stations. Usually the media is either twisted-pair wire, coaxial cable, or fiber-optic cable. However, some LANs use such exotic media as infrared light transmission and VHF radio. Some products also allow the use of 110-volt AC power wiring, though with certain limitations.

The media helps determine the LAN's maximum operating speed. Networks designed for IBM PCs or compatibles move

■ LANs AND BEYOND

■ The cost of the media and its installation is a major factor in the total cost of a LAN. It can easily run you \$1,000 per workstation if you must run coax within walls.

data over their media at rates ranging from 56 kilobits per second to 10 megabits per second. Typical speeds are from 2 to 10 megabits per second. While coaxial-cable systems transmit data faster over longer distances than do twisted-pair systems, fiber-optic systems transmit at speeds up to ten times faster than those using coaxial cable. However, since a LAN's actual operating speed is largely determined by the way the software interacts with the network and the access speed of the server's hard disk, you're usually better off spending money on a better server and software written to maximize the efficiency of the network rather than faster media.

Selecting the proper cabling for your system is something you generally don't have to worry about. Although a wide variety of coaxial cables exists, usually only the cables specified by the network vendor will deliver proper network performance.

Twisted-pair wiring is also specified by the vendor, and it may or may not be simple telephone wire. Fox Research and AST Research market networks that use telephone wire. AT&T's StarLAN can use either telephone wire or special wire that is designed to improve performance. In contrast, when IBM says that its token-ring network uses twisted-pair wiring, it means that the token ring uses a special kind of twisted-pair wiring. This wiring must be a IBM-standard cable designed to connect various IBM terminals and computers. Twisted-pair wiring conforming to the IBM standard costs as much as or more than coaxial cable to install.

Fiber-optic cabling is useful for special installations that have a noisy RF environment or need a long run of cabling and high-speed data transmission. It is not practical for the average installation. The dearth of technicians with the skill to install and maintain this relatively new type of cabling makes the network expensive. Also, the number of workstations that you can attach is limited because each additional station weakens the laser beam traveling through the cable.

The cost of the media and its installation is a major factor in the total cost of a LAN. Cabling can cost literally nothing per workstation if you can use twisted-pair telephone wiring that's already installed, or it can easily cost over \$1,000 per workstation if you must run coaxial or fiber-optic cable within walls. Installation charges for coaxial cable typically runs about \$4 per foot, plus \$40 to add a workstation. In addition, building codes and the type of construction can drive up installation costs.

NETWORK INTERFACE The network interface attaches each workstation to the media. Besides serving as a physical connection, the interface controls the signaling scheme—for example, token passing or CSMA—that the network uses to share the media.

The most common network interface found in PC LANs is a circuit board that you insert into the PC's expansion bus. This board usually has a connector for the appropriate media and various integrated circuits that can perform communications and processing tasks. Almost all interface cards have some kind of processor—which can even be a specially designed LSI device—but the processor's power varies widely from network to network. Because DOS is not an efficient multitasking system and because the computer's processor must also do other things, adding processing power on the interface card greatly improves network performance.

Some companies use a separate box to

OUR EXPERT REVIEW TEAM

Frank J. Derfler, Jr., is a telecommunications manager for the federal government and a contributing editor of *PC Magazine*. In January he will also begin a regular column for *PC Magazine* on telecommunications. He wrote a microcomputer data communications column that ran for 4 years in *Microcomputing Magazine*. He is the author of four books and hundreds of articles on data communications and microcomputers. In addition, he is a lecturer for New York University's seminar series and a frequent speaker for organizations as diverse as the American Institute of Certified Public Accountants and the Armed Forces Communications Electronics Association.

Roberto Rivera is an in-house computer consultant for George Mason University. He has also worked as a network applications programmer for Chase and Arlington in Rosslyn, Virginia.

The Most Powerful LAN Fits on a Disk.

Network Power. You knew that someday there would be a powerful LAN that didn't need old-technology network boards. It would be fast, easy to install, and run 99% of PC-DOS software. It would be expandable, provide remote access, password-protection, and enable you to use inexpensive terminals as workstations in a PC-DOS environment.

Dream no more, because the power is here.

Its name is LANLink™

A Software-Driven LAN Powerful Enough To Use RS-232 Ports for Network Communications. In development for over three years, LANLink™ represents the next generation of local area networks. All of the logic which has traditionally resided on network boards is on LANLink's Satellite and Server Diskettes.

No additional hardware is required. Inexpensive serial ports replace "Kilobuck" Network Interface Boards making installation costs one-third that of a board-driven network.

How To Configure a Smart Network...With Dumb Terminals, But Without Dedicated Servers. Boasting a wide variety of configurations, LANLink™ is most often set up as a "Star" having up to eight satellites connected to a central, nondedicated server. Larger networks can have multiple servers, supporting a total of 73 or more network users.

R-LAN™ (Remote-LAN) gives users the ability to interact with a LANLink™ network in real time via modem. Plus, it MultiLink Advanced™ is run on a Satellite, inexpensive dumb terminals can be used to access network disks, files, and programs.

99% of PC-DOS Applications Run in a Totally-Transparent Network Environment. If you know DOS, you already know how to use LANLink™ COPY transfers files among users, and a 2-drive PC Satellite boots 1-2-3 from the Server's hard disk with the entry c:\otus. Each satellite's access can be limited to specific disks, printers, and sub-directories. A wide variety of software including Lotus 1-2-3, dBASE III, and WordStar 2000 is fully compatible. LANLink™ has a collision-free data transfer rate which exceeds 115,000 BPS.

Power Up Your PCs Today. For complete details and the authorized dealer nearest you, call The Software Link TODAY. The LANLink™ Starter Kit is \$495 and includes modules for both a Server and a Satellite. For a limited time, 50 feet of shielded RS-232 cable will be included free of charge. Additional Satellite Modules are only \$195, each.

LANLink™ is immediately available and comes with a money-back guarantee. VISA, MC, AMEX accepted.

■ LANs AND BEYOND

interface with the network. These boxes are called network interface units (NIU) or bus interface units (BIU). Workstations connect to the NIU through an RS-232C cable. The advantage of NIUs or BIUs is that they allow you to connect almost any RS-232C device to the network. (What the unit does with the connection is determined by the network operating system, screen display, and other factors.) The primary disadvantage of a standalone NIU or BIU is cost. Since they include a cabinet and power supply, these boxes cost more than a simple interface card. Prices for interface units range from just below \$500 to slightly over \$1,000 each.

Zero-slot (or RS-232C) LANs use the RS-232C port on the PC for all connections. Since zero-slot LANs are available for less than \$100 per workstation, using RS-232C cable as the only media can save a large amount of money, but it foists the processing workload usually borne by the network interface cards onto the processors in the individual workstations. You pay for this added workload with reduced speed and capability.

TOPOLOGY The topology of the LAN refers to the way all the pieces hook together. There are three basic types of topologies: ring, bus, and star. Generally, in a *bus topology*, a single cable runs past all the network workstations. All the stations are either connected directly to one another or to the trunk line through a short drop cable. In a *ring topology*, workstations are linked together the same way as in a bus, except that the two ends of the cable are hooked together. In a *star topology*, individual cables run from either the server or a wiring hub to each workstation.

The topology affects the cost and ease of maintaining and troubleshooting the system. A bus requires less wiring than a star, for example, so it costs less. But a star is easier to troubleshoot: you can simply unplug each station in succession to find the one causing a problem rather than dismantle major portions of the system.

PROTOCOL PC LANs share writing and regulate their transmissions through connection schemes called protocols. A protocol is one of the least important factors to consider in purchasing a LAN,

■ Besides serving as a physical connection, the interface controls the signaling scheme.

since it is virtually invisible to the user. However, you'll probably see different protocols mentioned frequently in books and articles about networking, so you'll want to know what they are.

Polling, CSMA (carrier sense multiple access), and token-passing are all media-sharing protocols, although token-passing and CSMA are the most commonly used. In a polled system, a controlling station addresses a message to each workstation asking that station if it has any messages or data to transmit.

In contrast, the CSMA protocol operates on a listen-before-talking principle. Not unlike citizen-band or police radios, CSMA protocols transmit only if the channel seems clear. However, since two stations could begin transmitting at the exact same instant, their messages could collide. Hence various monitoring and collision-avoidance circuits are used to detect these collisions. The letters "CD" added to CSMA indicate the presence of these special collision-detection features. Ethernet is the most commonly used CSMA/CD system, but many other networks also have CSMA/CD.

The protocol in token-passing networks calls for the exchange of a message, or *token*, that gives a station permission to transmit. As stations pass the token, complex rules prevent users from bogging the transmission system. The IBM Token Ring Network and Standard Microsystems' ARCnet are both token-passing systems, but operate very differently.

Our coverage of local area networks is meant to identify all the alternatives and give you the facts you need to evaluate them knowledgeable. The background provided here should help you examine the individual systems described in "Making Connections: LANs Under NetWare." ☐

Multi-User
Accounting
System

Conceived on a Mainframe... Born on an AT

Ask a CPA about accounting software for PCs, and chances are he'll recommend an accounting package with multiple modules. If the package runs under PC-DOS, it probably won't support multiple users... at least in terms of supporting multiple users *within* each module.

But ask him what would be ideal for your organization, and he'll probably tell you that a true multi-user accounting system would be perfect.

Until now, this kind of system couldn't be found... couldn't run under PC-DOS, and couldn't run on hardware other than minis and mainframes. That is, until NetProfit™

NetProfit™ Will Change The Way You Think About Accounting Software...Forever. In use on large systems for over eight years, NetProfit™ enables you to use your accounting database as a powerful decision-making tool.

Financial reports can be user-customized. You can group accounts together, such as multiple checking accounts, and combine data from up to 99 companies, branches, or divisions.

Because the system is designed for multiple users, accounting files and records can be shared among all users and departments—with three levels

of security and password protection.

This means that salespeople using *Orders & Invoicing* can be continually updated by *Accounts Receivable* regarding a customer's sales and payment history. In addition, *Inventory* can keep Sales apprised of the availability and current cost of goods.

Up to 30 Simultaneous Users Under PC-DOS... With 72 or More Able to Access the System. Forget everything you've ever heard about the limitations of accounting software for the IBM PC. When combined with MultiLink® Advanced or LANLink™ NetProfit™ becomes a multi-user, multi-tasking accounting system that runs under PC-DOS 3.1 and better.

Running under MultiLink® Advanced, inexpensive terminals connected to host PCs, XT's, and AT's can be used as workstations in the system.

Don't Be Held Single-User Accountable. For complete details about the NetProfit™ Multi-User Accounting System and the authorized dealer nearest you, contact The Software Link today.

NetProfit™ is immediately available at a cost per module of \$795. Evaluation disk available. Complete satisfaction is guaranteed or your money will be promptly refunded. VISA, MC, AMEX accepted.

The Multi-User Accounting System

The Power of Simplicity.

Until now, if you wanted to create powerful business graphics simply, you needed a mainframe computer, a graphics department, or a compromise on your PC. Stella Business Graphics™ just changed that.

Stella Business Graphics.
Twelve formats for powerful charts and graphs.

Your first Chart
in five minutes.

1

Boot your PC. Type
SBC. When the
menu screen
appears, use the
cursor to select any
of 12 formats for
your graph. Then
press (RTN).

Works with everything. Your IBM™ PC or compatible, EGA, CGA, monochrome or Tecmar™ graphics boards. Dot matrix, color dot matrix, ink jet and laser printers, plus color and monochrome plotters for professional printout and crisp overheads. And for presentation quality slides, Stella works with Polaroid Palette™ and other film recorders. It's simply a graphics department on a diskette. At an introductory price of \$199.

A new standard for business graphics. See for yourself. Ask your computer dealer

for a hands-on demonstration of Stella Business Graphics. You'll see why it's the first PC graphics program that deserves to have "business" in its name.

Stella Business Graphics™

Stella Systems, Inc.
10430 South De Anza Blvd.
Cupertino, CA 95014

For information and the name of your nearest dealer, call CSSL Sales Toll Free: (800) 654-5301. In California (213) 493-2471 Dept. B

The power of graphics. Charts and graphs communicate in a way numbers can't. Trends. Relationships. Progress. Comparisons. Stella Business Graphics can turn a table of dry numbers into powerful graphics. In any of twelve formats. In seconds.

The simplicity of power. With Stella Business Graphics, almost anyone can use a PC to create powerfully effective charts and graphs. Even a two-finger typist. It's as simple as choosing the type of graph you want, entering data and labels on the Stella Data Spreadsheet, or importing data from another file, and selecting functions from a menu. Stella does the rest.

Stella goes 1-2-3™ one better. Stella Business Graphics adds enhanced business graphics to spreadsheets like 1-2-3, Multiplan™, or SuperCalc III.™ Or, to your numerical databases. It can even import data from tables in a word processor. ASCII, SYLK, DIF, or SDF files, Stella works with them all.

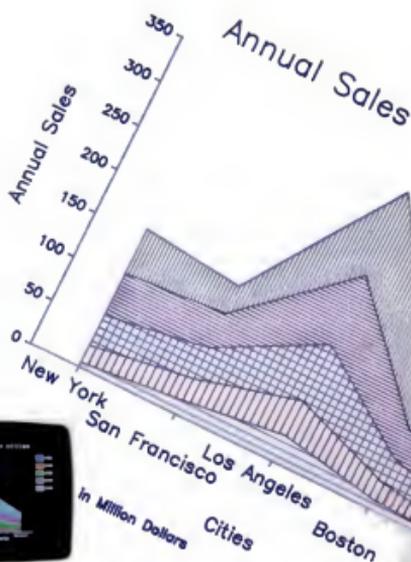

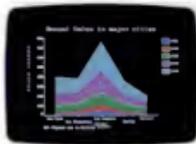

2

Press F4 and (RTN) to bring up the Stella Data Entry Spreadsheet. Enter data and labels. Or select an existing graph file and press the (RTN) key. Then press (ESC).

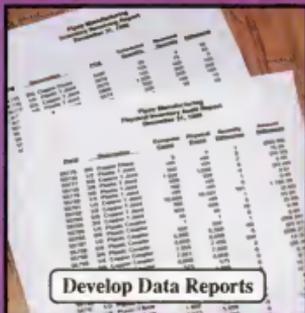

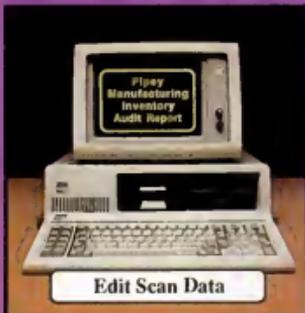

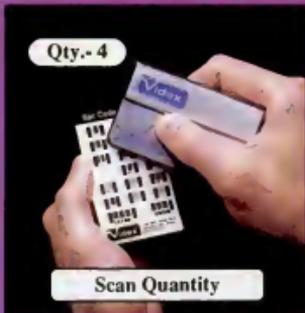

3

Your graph will be on screen, like this. To print it out, just turn on your printer and press F5. That's the power of simplicity.

TimeWand™ - Gathering Information

Bar Codes, Computing, and the TimeWand... a Closer Look.

"A successful business runs on accurate, timely information." An obvious statement perhaps, but one that every personal computer user must keep in mind. In order to get the reports we require, we must ensure that the information on which we base our decisions is as up-to-date as possible. This is where a bar code reading system such as the TimeWand can be used to improve efficiency in the office or workshop. The TimeWand provides a convenient way to ensure that your computer has all the facts, all the time.

Let's use inventory control as an example. Once an inventory system is set up on the computer, you are faced with the important task of keeping the inventory up to date. The TimeWand gives you a quick and efficient method of getting information into your computer system. To enter an item into inventory (such as the copper elbows shown above), all you need to do is scan the item, the quantity, and transfer the data to your computer. By using TimeWand, you bypass the time-consuming steps of writing down every transaction, deciphering hand-written notes, typing in each inventory transaction by hand, and searching for transcription errors that might have occurred. The TimeWand is an ideal tool for gathering information for use in your business.

From time-billing to tracking work orders to monitoring security, the TimeWand provides an inexpensive solution for your data collection needs. Call or write Videx today for more information about how the TimeWand can help in your business.

The Software Key to LANs

●

Many of the networking features you have to consider when making a LAN purchasing decision will be features of the networking software. Since many networking systems can work with more than one networking software package, you'll need to make a choice. And to make an intelligent one, you must understand what the software does, the way the software is sold, how all the pieces of the software work together in layers, as well as how and why different vendors vary the basic scheme.

Networking software is really a series of programs that reside on the server. Their primary function is to move data between the network and the server's disk drives, to control the sharing of files and records, and to control access to data. In ad-

dition, networking software can include such options as electronic mail, security programs, and network diagnostics.

With all the hardware that goes into a LAN, who would think that software determines most of your network's features? To make an intelligent LAN decision, it's vital that you understand what the networking software does and how it operates.

Novell and Microsoft Corp. are the leading vendors of networking software. The current version of Novell's product is called *Advanced NetWare* (see "Making Connections: LANs Under NetWare" for our review). *NetWare* comes adapted to and bundled with many other vendors' networking hardware. *NetWare* also comes in three generic versions: *Advanced NetWare/86* for servers running the 8086/88 processor, *Advanced NetWare/286* for servers having the 80286 processor, and *SFT NetWare (System Fault Tolerant NetWare)*, which allows the system to continue functioning should one or more system components fail.

COVER STORY
FRANK J. DERFLER, JR.

■ NETWORKING SOFTWARE

Microsoft does not market *Microsoft Networks* to the public as a retail product. Rather, the company licenses *Microsoft Networks* as a series of modules to major companies that, in turn, combine, enhance, and sell them with their own hardware. These modules include sections called the server, redirector, print spooler, some utilities, and NETBIOS. Notable among the *Microsoft Networks* licensees are IBM Corp., AT&T, Ungermann-Bass, and 3Com. Other companies, including Novell and Fox Research, have written their own networking software that they claim is compatible with *Microsoft Networks*.

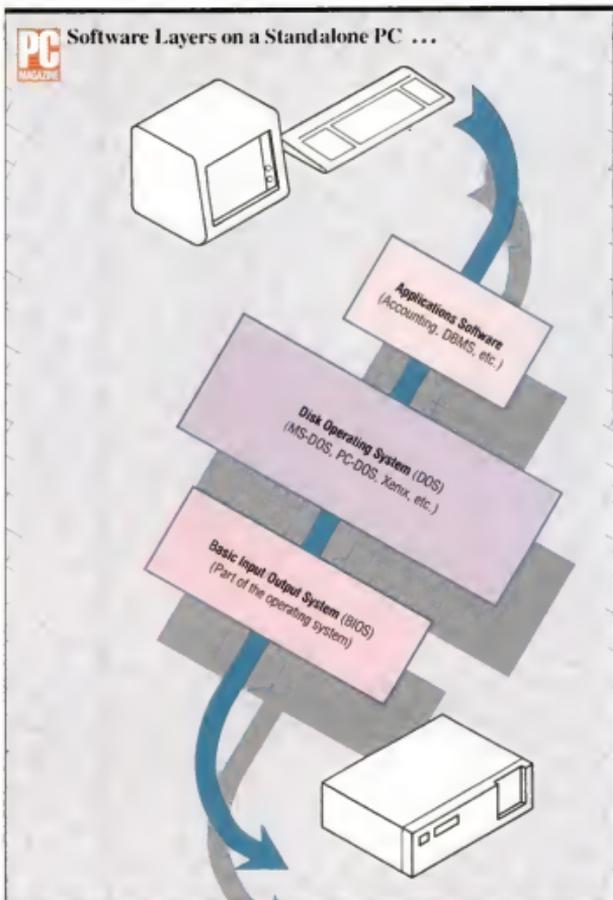

SOFTWARE LAYERS To understand how networking software works, it's useful to compare it with software on a standalone PC (see "Software Layers on a Standalone PC vs. a Network Server"). A standalone PC requires several layers of programs and subroutines that must work together. The bottom layer consists of a machine language program, called the basic input/output system (BIOS), that manages all serial peripherals. In the IBM PC, this BIOS is partially in ROM and partially in the hidden system file called *IBMBIOS.COM*. IBM PC compatibles usually read all of the BIOS from disk at startup.

The layer above the BIOS consists of the disk operating system (DOS) software. All versions of MS-DOS and PC-DOS through Version 3.0 were designed for single-user applications, meaning that their BIOS and DOS layers are capable of performing only one task at a time.

The third and final software layer for a standalone PC is the applications software, which interacts with the DOS and BIOS in order to receive data from a disk, keyboard, or port or to transmit data to a video device or port.

NETWORK SERVER LAYERS Network workstations use the basic software layering described above. Networking software runs only on the server and adds a number of utilities and layers to the basic software layering scheme (see network server diagram).

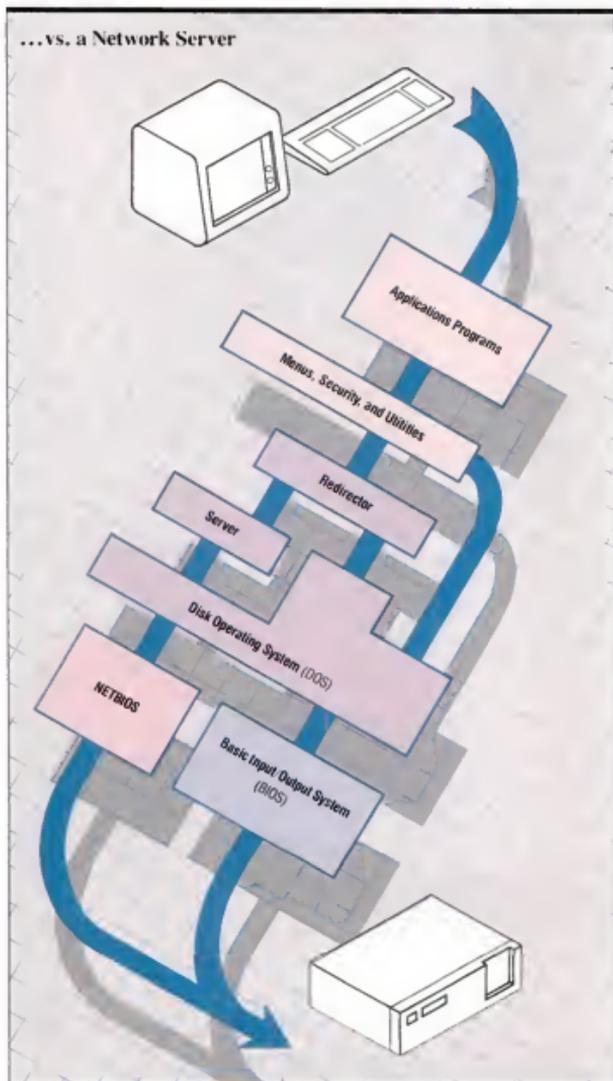

Two pieces in the layering scheme have been instrumental in kicking off the recent

▲ Software Layers on a Standalone PC A standalone PC requires three layers of software that must all work together. The lowest layer is a machine language program called the BIOS that manages serial peripherals. The operating system, DOS, forms the second layer. And applications software, the final layer, interacts with the hardware through DOS and the BIOS to transmit data to and receive it from a disk, keyboard, or port.

► Layers on a Network Server Networking software for a network server adds layers and modules to those required to run standalone software. NETBIOS fits into the layering scheme at the BIOS level. It sends data to and receives it from the network adapter card. The second layer is DOS 3.1. At that layer are programs called the server and the redirector. The server layer allows every workstation on the network to share its disks and peripheral devices with the network and to exchange data with other workstations. The redirector layer determines when data should go out to and be received by the network. On top of the redirector sits the remainder of the networking software package. This layer may contain security routines and menus. Applications packages sit on the very top.

...vs. a Network Server

proliferation of applications and networking software: DOS 3.1 and NETBIOS. DOS 3.1, from Microsoft and IBM, added to the normal DOS functions file- and record-locking capabilities, as well as calls and signals (called semaphores) that work through the networking software to regulate applications programs' access to files. Without file and record locking, simultaneous multiuser access is impossible because the last person to save data to a file overwrites the data inputted previously. In addition, NETBIOS, developed by Sytek and IBM, allows the networking cards to talk to your PC's hardware. DOS 3.1 and NETBIOS have become standards. Both applications programmers and networking software vendors, Fox Research and Novell included, have scurried to include these standards in their networking software for the benefits of file and record locking.

The advent of these standards, announced in the fall of 1984, marked a turning point in networking and applications software development. Prior to DOS 3.1, applications programmers faced dealing with different file- and record-locking schemes from different vendors. Novell, for example, produced a widely accepted networking software package that included its own file- and record-locking procedures, but other successful companies, such as Fox Research and 3Com, marketed their own software, which worked quite differently. Some vendors ignored the issue altogether and limited their networks to file-swapping and printer-sharing jobs. Now networking and applications programmers can write to a standard.

NETBIOS NETBIOS fits into the software layering scheme at the lowest level, the BIOS layer. The NETBIOS sends data to and receives data from the network adapter card, just as the regular DOS BIOS communicates with the serial, parallel, and other communications ports.

Companies have the choice to either license Microsoft's NETBIOS module or develop their own compatible BIOS software. Sytek, which helped develop NETBIOS, includes the utility on its network interface boards. Other network companies usually include a version of NETBIOS, customized for their hard-

MAKE YOUR IBM PC FASTER THAN AN AT.

IN JUST 5 MINUTES!

\$395

Introductory offer

DON'T TAKE OUR WORD FOR IT. USE IT FOR 60 DAYS. IF YOU ARE NOT TOTALLY SATISFIED RETURN IT FOR A FULL REFUND.

It sounds great; the idea of a speedup board that you can just plug right in as easily as putting bread in a toaster. How wonderful to be able to convert a PC or XT to a \$4000 AT without the expense. But even when you get ready to spend \$395.00 you want to be sure your choice is the very best.

Here at PCSG we sell our IBM PC disk access speedup software by the thousands. But software doesn't do anything about speeding up the microprocessor (or CPU) speed. As you know the microprocessor is the brain of the computer that controls all the operations like screen updates and calculations like a spreadsheet makes.

Faster and smarter than an AT— PCSG guarantees it.

We wanted to offer a speedup card that would be the compliment to our disk speedup software, (incidentally included at no extra charge.) We wanted it to be literally the most advanced, fastest, most feature rich board available today. We could only be satisfied with a board that was the finest example of the engineering art.

There is no question we have met our every objective by developing and manufacturing the *BREAKTHRU 286* card. This is the best designed and most functional speed up card available today. We guarantee it.

HERE IS WHAT MAKES IT SO SPECIAL.

First, it installs so easily. It is a half slot card, only five inches in length. You don't even have to give up a full slot. What's more, unlike competing products it works in the Compaq and most clones. The instructions are so simple we considered showing a picture of a child putting it in. Easy diagrams show how you just place the card in an open slot, remove the original processor and connect a single cable. There is no software required. From that moment you are running faster than an AT.

Second, it is advanced. The *BREAKTHRU 286* replaces the CPU of the PC or XT with an 80286 microprocessor that

is faster than the one found in the AT. A 16K cache memory provides zero-wait-access to the most recently used code and data. In benchmark tests the card accelerated software programs—both custom and off-the-shelf anywhere from 200% to as much as 700%. Wow!

Third, you have full compatibility. All existing system RAM, hardware, and peripheral cards can be used without software modification. It operates with LAN and mainframe communication products and conforms to the Lotus/Intel/Microsoft Expanded Memory Specification (EMS). Software compatibility is virtually universal.

Fourth, it is the best there is. There are several other boards on the market. Some are priced about the same as the *BREAKTHRU 286* and some are cheaper. We at PCSG have compared them all, but there simply was no comparison. What we discovered is that many cards being sold offer only a marginal speed up in spite of their claims. We found some to be merely versions of the obsolete 8088 or 8086, and others to be just poorly engineered. The 8MHz *BREAKTHRU 286* is unequivocally the best executed and most completely reliable speedup board manufactured today.

PCSG has since early 1983 dominated the lap portable market with ROM software such as Lucid spreadsheet and Write ROM that reviewers rated as excellent. We were proud to successfully enter the IBM PC market last year with disk access speedup software. Now we are so pleased with the *BREAKTHRU* speedup card. We use them on our own PC's to make them faster than AT's. We are really excited about this product.

PCSG makes the unabashed statement that the *BREAKTHRU 286* card represents more advanced technology than boards by Orchid, Quadram, Victor, Mountain, P.C. Technologies, Phoenix... we could go on.

But an ad can't let you experience it for yourself. That's why we sell the *BREAKTHRU 286* on a 60 day trial. If you aren't completely satisfied return it within 60 days for a full refund. It is priced at \$395. Call today with your MasterCard, Visa, American Express or COD instructions and we will ship your card the very next day. CIRCLE #99 ON READER SERVICE CARD

Some Applications Software Suggestions for Your LAN

The growing availability of applications software that meets the NETBIOS and DOS 3.1 standards has helped fuel the growth of local area networks. And currently the most numerous networked applications are DBMS, accounting, and word processing packages.

Of these applications, multiuser database and accounting applications give you the most productivity punch for your networking dollar. Using such packages on a LAN, many business users can input, retrieve, and distribute information at the same time from the same file. Every business needs some sort of accounting packages. In addition to using the file- and record-locking capabilities of a multiuser database, networked accounting packages allow you to specify various levels of security for sensitive financial data.

Networked word processors allow users to create and edit their work on their own computers, store it on a shared hard disk, and print it on shared printers. In addition, you can send your manuscript over the network to a co-worker, rather than run down the hall with a disk.

Other, less-common networked applications include integrated software, communications packages that let users "chat" with others on the network in real-time or leave messages in an electronic mailbox. Another area of growth is in the CAD field. Often, design projects are undertaken by teams of engineers and designers. Networked CAD packages act as massive databases that let you store libraries of images, call them up, and manipulate them at will. Hence, various users can input, store, recall and modify basic designs.

If you have a LAN or are thinking of checking one out, here are some packages that will get you started:

DBMS *dBASE III PLUS* (Ashton-Tate, Torrance, California), *R:base 5000 System V* (Microim, Bellevue, Washington), *Revelation* (Cosmos Inc., Seattle, Washington), *DataFlex* (Data Access Corp., Miami, Florida), and *Informix-SQL* (Relational Database Systems Inc., Menlo Park, California).

WORD PROCESSING *WordPerfect* (Satellite Software International, Orem,

Utah), *MultiMate Advantage* and *MultiMate Professional* (Ashton-Tate, Torrance, California), *Samna Word III* and *Samna +* (Samna Corp., Atlanta, Georgia), *OfficeWriter* (Office Solutions Inc., Madison, Wisconsin), *WordStar 2000* (MicroPro International Corp., San Rafael, California), and *Microsoft Word* (Microsoft Corp., Bellevue, Washington).

ACCOUNTING *EasyBusiness* (Computer Associates, San Jose, California), *Solomon* (TLB Inc., Malvern, Pennsylvania), the *Medallion* collection (Timberline Systems Inc., Portland, Oregon), and selected accounting packages from Open Systems Inc., Eden Prairie, Minnesota; Real World Corp., Chichester, New Hampshire; and CYMA/McGraw-Hill, Mesa, Arizona.

In addition, since many accounting programs are written in COBOL, BASIC, or other languages, you can add appropriate commands to control record locking with programs such as RM/COBOL (Ryan-McFarland Corp., Rolling Hills Estates, California).

—Cheryl Goldberg

ware, with the networking software.

Each networking company includes unique features on its adapter cards that must integrate with the NETBIOS functions. If you want to use NETBIOS with another vendor's cards, you must have the right version or an emulation of the right version for the network adapter card you intend to use.

In the early days of the IBM PC, some applications made direct calls to the PC's ROM BIOS in order to speed screen displays or perform other functions. Developers soon found that such programs could not run on many PC compatibles. Similarly, some networking applications developers are using NETBIOS calls in applications, such as electronic mail, that can benefit from peer-to-peer communications. Other network communications

■ The NETBIOS sends data to and receives data from the networker adapter card, just as the BIOS communicates with serial and parallel ports.

tasks, ranging from finding the status of other stations to checking copy protection, can be done quickly through NETBIOS. Because you may someday run programs

on your network that use NETBIOS, be sure the networking software you choose either uses Microsoft's NETBIOS or is truly compatible.

THE SERVER AND REDIRECTOR In the network-layering scheme, DOS is still the layer above the BIOS. But networking software adds modules that sit next to and on top of DOS. Some versions of the *Microsoft Networks* software add a program on top of DOS, called the server, that allows every workstation to share its disks and peripheral devices with the network and to exchange data in what is called peer-to-peer communications. In effect, this makes every workstation on this network a server.

Above and next to the server is the redirector layer. The redirector layer acts

CAUTION: DON'T USE A PERSONAL COMPUTER WITHOUT GIVING IT A JUMPSTART.

Ok, so you've invested your hard earned cash in a personal computer. And you don't have time to learn programming. You've got a business to run and want your PC to go to work right away.

There's only one way to get to work from day one. Give it a JumpStart.™

JumpStart, from Ascent, is the one program you need to get your IBM PC, XT, AT or compatible computer—desktop or laptop—down to business the first day you take it out of the box.

JumpStart's powerful, easy to learn text editor will have you writing notes, letters, or reports almost as soon as you boot up.

But that's just the beginning. JumpStart maintains your address book and organizes your calendar by day, week, month or year. It tracks all your appointments. And it prints appointments and address book ready to insert in any 3-ring business diary. So you stay organized and on-time both in the office and on the go.

ASCENT

JumpStart and AI Logo by Ascent, Inc.
190 Sobrante Way, Suite 201
Sunnyvale, CA 94086

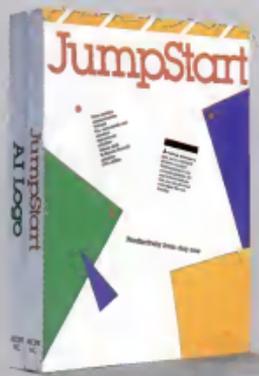

JumpStart's voice and data communications and your PC's modem keep you well connected. Dial voice phone calls from your address book with a single keystroke. Connect your PC with electronic bulletin boards, news, stock and shopping services. Send and receive files or programs across the hall or around the world.

SPECIAL OFFER

One great start deserves another. Get a head start on computer literacy with Apple Logo. Command compatible world wide, AI Logo brings the powerful, popular educational programming language to the IBM-PC. Order JumpStart now and, for just \$33 more, get AI Logo, too. That's a \$154 value for just \$99.

CIRCLE 494 ON READER SERVICE CARD

JumpStart and AI Logo are trademarks of Ascent, Inc. Apple is a trademark of Apple Computer Corp. Logo is a trademark of Logo Computer Systems, Inc. PC, XT, and AT are trademarks of International Business Machines Corporation.

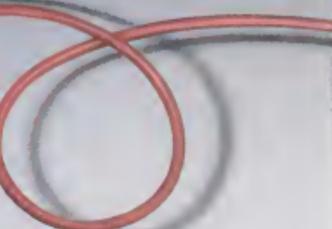

JumpStart's financial formulas help keep your figures straight. You don't have to be a banker to calculate loan payments or make 16 other essential business financial decisions. JumpStart asks the right questions and always gives you the right answers.

Taming DOS is a snap when you JumpStart it. Copy, erase, or rename files. Examine directories and master most other DOS housekeeping chores.

Best of all, JumpStart is easy to use. You're guided every step of the way by simple English menus. Give your PC a JumpStart and leave computerese behind.

Until now, this much performance required at least four separate programs and nearly \$400.00. JumpStart gets you going today for \$66.

Not copy-protected. Money-back guarantee.

JumpStart is not copy protected and comes with a no-risk, 60-day money back guarantee. If JumpStart does not perform as promised, return it to Ascend for a full refund.

Act now, give your computer a JumpStart and get down to business. To order call toll-free

1-800-FOR-JUMP

(1-800-367-5867)

from 9:00 AM to 4:30 PM PST, Monday through Friday. In California dial (408) 720-9200. Visa and MasterCard accepted.

You'll see a jump in your productivity right from the start.

Dealer inquiries invited.

JumpStart and AI Logo run on IBM PC, XT, AT or compatible computers with DOS 2.0 or higher. JumpStart uses 102k and AI Logo uses 64k of system memory.

CIRCLE 694 ON READER SERVICE CARD

■ NETWORKING SOFTWARE

■ Applications programs with sole access to data files need no special features to run on a LAN.

as a traffic controller within the networked PC, determining when data should go out to or be received from the network.

The remainder of the networking software package sits on top of the redirector. This layer may contain security routines to identify network users and menus to help network functions.

APPLICATIONS PROGRAMS Applications programs with sole access to data files—on either the local disk drives or the disk drives on the server—need no special features to run on a network. Perennial favorites like *WordStar* and *1-2-3* work fine on a network as long as each person using them accesses only his own files. (There are also licensing limitations on multiple stations running the same copy of the program.) But if two people try to access the same spreadsheet file with *1-2-3*, one of them can lose all of his work. The last person writing the data file back to the disk erases everything anyone else saved.

If programs on a network share the same records or files, they must be designed to read the signals presented by DOS 3.1 and take appropriate actions. For example, a DBMS (database management system) program that allows several operators to access and update a warehouse inventory must contain lines of code directing DOS to lock a record or file while it is in use. The creator of the DBMS application also has to put in routines responding to the "locked" signal from DOS and informing the operator that the record or file is in use and cannot be modified.

Although the scheme described can be used as a basic sketch of networking software layers, different vendors make some modifications to this scheme. For example, while Novell layers its software in a manner similar to that used by DOS sys-

tems, it supplies its own operating system for the server. This operating system uses disk caching to hold portions of the data in memory for easy access and uses a technique called elevator seeking to put requests for data into an order that makes efficient use of the hard disk. Novell's server operating system significantly increases the speed of disk read and write actions through the network.

Novell's *NetWare* requires a computer on the network be configured as a server if it is going to share resources. But the software will allow you to partition the server's hard disk so that you can also use the server as a workstation operating under DOS—although using the server in this way slows the performance of both the workstation and the server. The portion of the server's memory formatted for the Novell operating system is not directly available through the server's keyboard because of technical differences between the Novell operating system and MS-DOS. But it serves as a good security device since all files must be accessed through the network, with its security system.

Novell calls the software performing the function of the redirector the DOS shell. But while the technical details of how Novell's shell and Microsoft's redirector operate are different, what they do is similar.

Banyan and AT&T use UNIX as the operating system for their servers. UNIX is designed for multiuser operation. The AT&T systems can service directly attached terminals running UNIX applications while servicing a network of PC/MS-DOS workstations.

ADDED FEATURES Even if two companies should both license *NetWare* from Novell or *Microsoft Networks* from Microsoft, their final networking software may look very different to the people using the network. Each network vendor can add menus, icons, or utility programs to make its software easier to use or more useful. You'll find the full list of software features and how they work in this issue in "Making Connections: LANs Under NetWare" and in "LANs Under NetWare: Summary of Features." And, of course, the reviews will tell you which network has which of these features.

Why Do They Look So Different But Cost About The Same?

This is Toshiba 24 pin letter quality.

This is 9 pin printer quality.

When we developed the P321 and P341e 3-In-One™ dot matrix printers, we had just two goals in mind.

Superb 24-pin letter-quality reproduction. And a price that's as close as possible to standard 9-pin models.

One look at the print sample shows you we succeeded. So will one look at the price.

In fact, we were so successful, we gave these 24-pin printers with the 9-pin price a special name: *The Affordable Class*.

And we included features—starting with type font cartridge capability—that put them in a class by themselves.

Both the Toshiba P321 and P341e printers produce letter-quality documents at 72 CPS, drafts at 216 CPS and high-resolution graphics at 180 x 360 dpi.

Each printer has our industry-standard P351 command set for more sophisticated word processing and high-resolution graphics.

And each printer has standard application compatibility with the entire IBM-PC¹ line of products.

Options include downloadable disk capability and type font cartridges for an unlimited range of type styles, a one- or two-bin sheet feeder

as well as continuous forms tractor feeder.

The affordable and compact P321: If you're keeping an eye on the bottom line, we'd like to direct your attention to our P321. When it comes to virtually all business and correspondence needs, it fills the bill nicely.

You get letter-quality reproduction in a printer that looks great on the bottom line.

The affordable extended-carriage P341e: If you need to do full-size spreadsheets, you need our wide-carriage P341e.

Like the P321, the P341e uses our 24-pin printhead that lasts up to four times longer than other printheads, and has made us the number one seller in the business.

So buy a Toshiba Affordable Class P321 or P341e printer today. You'll get letters that look perfect every time.

And a type font cartridge free.

For the Toshiba printer and computer dealer nearest you, call 1-800-457-7777.

1. IBM-PC is a registered trademark of International Business Machines Corporation.
*Offer expires 2/15/87. See your Toshiba dealer for details. Or call 1-800-457-7777.

An Overview of Networking Options

•

When you get right down to it, connectivity is all about two things. Personal computer users with common interests want to swap files and access common databases. And organizations want to cut costs by sharing expensive equipment such as hard disks, laser printers, and vertical plotters.

The cover story in this issue of *PC Magazine* is primarily about local area networks. But LANs are only one of the many possible ways to share resources. In fact, there are so many ways to share data and equipment that you may choose from a continuum of alternatives with many gradations, from the simplest to the most complex. You may decide to use a LAN or you may determine that one of these other connection schemes

Basically connectivity is about sharing data and sharing expensive equipment. But LANs are only one of the many ways to pool resources. Your alternatives range from circuit-switched systems to LANs to minis to mainframes. You may decide to stick with a LAN, or you may choose one of the many options detailed here.

COVER STORY
FRANK J. DERFLER, JR.

will more closely fit your needs.

One way to distinguish between these many alternatives is to consider the connection scheme they use to hook workstations and/or computers together. A connection scheme refers not to the type of media used—you can use any type of media, from telephone wires to fiber-optic cable—but rather to the way these users share the media.

Connection schemes range from temporary circuit-switched connections, like those made during a telephone call, to permanent connections made between mainframe computers and their terminals (see diagram, "Networking Alternatives"). PC LANs use a mix of permanent and temporary connections: LAN workstations are permanent-

■ NETWORKING OPTIONS

ly linked together by wires but the connections are "temporary" since they exist only as the stations take transmitting data through those wires. Media-sharing protocols—CSMA, polling, and token passing, described in "Connectivity: LANs and Beyond" in this issue—make sure that each workstation has access to the network and that data is not lost through collisions.

Economy and performance are important factors in selecting an information-transfer alternative, and we cover those, too. But the type of connection scheme affords a clear-cut way to differentiate between these systems.

CIRCUIT-SWITCHED SYSTEMS Circuit switching is the simplest sharing alternative, and the most familiar. You use it every time you make a telephone call. Circuit-switched connections are temporary, lasting only for the duration of the call or session. A switching device makes the connection. Like two people chatting on the phone, two systems communicating through a circuit switch talk only to each other; they cannot send data to or receive it from any other stations. The only form of traffic control is a busy signal.

If you want to exchange files and share printers, a circuit-switched system running the proper software could be all you need. These communications networks are relatively inexpensive and—most important—require little support from network programmers or administrators.

Circuit-switched systems include "sneaker net," RS-232C patch boxes, data PBX, digital PBX, and Centrex systems. For a simple connection scheme, consider the techniques described below.

SNEAKER NET Often it's the same people who, at home, informally exchange programs or data files that want an expensive local area network to perform the same function at the office. But if you simply need to exchange and update data files once a day or once a week, *sneaker net*—simply trading disks—is cheaper and more reliable than any electrical data-exchange scheme.

If you need a jargony way to justify your choice of sneaker net, you could say that exchanging disks is a circuit-switching connection scheme with a short connection

■ Using sneaker net, you can make a connection in the instant it takes to hand over a disk.

time and very high bandwidth. Using sneaker net, you can make a connection in the instant it takes to hand over a disk. A disk can transfer 360K bytes or even 1.2 megabytes of data to a PC down the hall in seconds. Express package delivery services can move disks with gigabits of data across the nation overnight without garbling a single bit. And exchanging removable high-capacity storage media like tape and Bernoulli Box cartridges results in an even wider bandwidth transmission.

Other methods of moving data may have more pizzazz, but why pay for the sizzle on a steak when a hamburger will do just as well?

RS-232C PATCH BOX For making one or two connections a day outside your standalone PC system, you might consider an RS-232C patch box connection scheme. This scheme is also good for sharing serial devices like laser printers. Moreover, while the maximum speed of data in a patch box network depends on the quality of the cable, the distance, and other factors such as electrical noise, this simple network can make error-free transfers at 9,600 bits per second.

The RS-232C patch box is a circuit-switching device that has probably been reinvented more times than any other device in the history of tinkering—electronic or otherwise. People using PCs for many different applications have found it economical to run RS-232C cables from each computer to a central patch box. Each cable terminates in an exposed connector, and you use short jumper cables at the patch box to link any two connectors—just like an old-fashioned switchboard. However, one drawback of the RS-232C patch box is that you'll have to move relatively thick RS-232C cable if you transfer a

workstation to an unwired location.

To transmit and capture the files exchanged through the patch box, you use a communications program such as *Crosstalk*. *Crosstalk* can transfer data between two computers at over 32,000 bps in some RS-232C patch box installations.

Commercial versions of the patch box are available from Black Box Corp. in Pittsburgh, Pennsylvania, and Devoko Co. in Santa Clara, California. Devoko prices a 48-port patch box able to switch six wires (adequate for most RS-232C jobs) at \$261.

DATA PBX If workstations in your office typically initiate as many as a dozen connections a day to large host computers, other workstations, or peripherals such as printers and plotters, you might want to consider a data PBX system. The data PBX automates the RS-232C patch box for relatively high-speed (a maximum of 9,600 bps) circuit switching. Data PBX devices are generally less expensive and less complex than PC LANs.

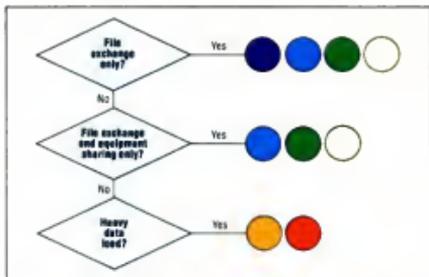

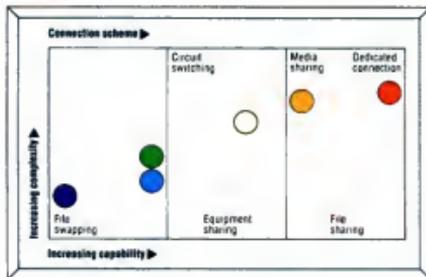

Like a patch box, a data PBX usually gives you just the communications path. You must use communications software in the connected PCs to send and receive files or to use a printer. All attached devices must run at the same speed, use the same data alphabet (usually ASCII), and exchange the same control codes. Neither data PBXs nor patch boxes normally do any speed conversion or translation of screen graphics characters (there are exceptions).

The acronym *PBX* stands for private branch exchange, and most people think of a PBX as a voice telephone device. A *data PBX* is a special kind of switch that makes connections between computers and terminals attached to its ports by remote command and then disconnects when the session is completed. Computers and terminals might connect to the data PBX through multiconductor cables using the RS-232C signaling scheme or through various kinds of two-wire or four-wire connections using the RS-232C port and cable adapters.

A data PBX can be a very friendly device. Typically, you get its attention by sending it a couple of carriage returns or a break signal. Some systems return a special prompt and wait for a connection com-

Networking Alternatives

Once you've decided to connect your PCs, you'll quickly discover that you have many categories of products to choose from. One way to distinguish between these categories is to consider the connection scheme they use to hook computers together. Above, *PC Magazine* diagrams these alternative connection schemes. As you scan the illustration from lower left to upper right, you'll notice that the alternatives offer increasing capability and complexity. Your simplest choice is to swap disks. Slightly more complex are circuit-switching systems that let you share files and peripherals. LANs occupy the middle ground of capability and complexity, allowing the most sophisticated form of data sharing: simultaneous multiuser access to files. Finally, at the upper right are mini and mainframe computer systems, which also offer file sharing. In the captions and decision matrix, upper right, you'll find a quick synopsis of each system's capabilities and sharing scheme.

Disk exchange If you simply need to exchange and update data files on a daily or weekly basis, simply trading disks (popularly known as "sneaker net") is cheaper and more reliable than any electrical data exchange scheme.

RS-232C patch box For making one or two connections daily with other computers or to share peripherals, an RS-232C patch box is an inexpensive alternative. To use this circuit-switching device, you run RS-232C cables from each PC to a central patch box. When you need to make a connection, you link any two cables using jumper cables. You then use a communications program to send and receive files.

Data PBX To make up to a dozen connections a day to other computers or to share peripherals, you might consider a data PBX. This scheme automates the RS-232C patch box for inexpensive, relatively high speed circuit switching. One drawback is that neither data PBX's nor RS-232C patch boxes do any speed conversion or translation of graphics characters. In addition, all attached devices must use the same data alphabet.

Digital PBX and Centrex These two circuit-switching schemes look different but function identically, allowing you to

send voice and data over telephone lines. Both systems let you make dozens of connections daily and move workstations easily. In addition, these systems allow you to connect devices that use different transmission speeds, and they can convert some control codes. A digital PBX is a modern voice-and-data telephone switch, controlled by a computer. Centrex is a service offered by your local telephone company.

Local area networks While more expensive than circuit-switching systems, LANs offer a more sophisticated form of data sharing; they allow many users to access the same files simultaneously. You can also use a LAN to share files and peripherals. Workstations in a LAN are connected permanently with wires, but they talk to each other using those wires. Access protocols, such as polling, CSMA, and token-passing, control the sharing of wires.

Mainframes and minis If you need to establish several simultaneous sessions for database inquiries, electronic mail, or other jobs, or if you need long, dedicated file transfers or fast, highly interactive operations, choose a mini or mainframe. These systems also allow you to store huge amounts of data. Minis and mainframes use permanent, hard-wired connection schemes.

■ NETWORKING OPTIONS

mand. Others furnish a list of the attached systems for you to choose from. You tell the switch what workstation or computer you want to connect to and, if that port isn't busy, the data PBX hooks you up. Some systems will form a queue for a busy port.

The data PBX system is not a new phenomenon. Thousands have been installed, and major companies like Micom Systems, Gandalf Data, and Davox Corp. are the leaders in this business. Versions of these switches are available for as few as 8 and as many as 4,000 lines, and they can do a dandy job of establishing connections between PCs. In the bigger systems, costs can be as low as \$100 per port and usually don't run over \$250 per port.

DIGITAL PBX AND CENTREX

Centrex and digital PBX connection systems allow you to move workstations easily and complete dozens of connections efficiently. Unlike data PBX systems, both modern Centrex and digital PBX systems connect devices that use different transmission speeds and can also convert some screen and printer control codes. Some of these systems can move data over twisted-pair wiring at speeds ranging up to 56 kilobits per second, although 9,600 bps is more common.

Although a digital PBX and a Centrex system look different, their functions are identical. *Digital PBX* is the term used to refer to a modern voice-and-data telephone switch. The heart of a digital PBX is a computer that you keep in your building. This computer can be anything from a PC using the 8088 processor to AT&T's 3B20 computer system with a 32-bit chip.

It's easy to put an RS-232C connector on the back of a digital telephone for voice-plus-data service. This is how digital voice transmission works: A processor in a telephone attached to a digital PBX digitizes the speaker's voice at the point where the curly cord comes out from the handset. The digitized voice travels through the system until another phone attached to the PBX converts it back to analog or until the PBX switch converts it back to analog and sends it on to outside phone lines.

A digital telephone can also transmit data. You connect your PC to the digital phone using an RS-232C connector. The

■ An RS-232C patch box connection scheme is good for sharing serial devices like printers.

phone will transmit data directly to another digital phone attached to the PBX system. If you call a number outside the system, the PBX telephone switch sends your data via modem.

Centrex is a similar service offered by your local telephone company. Instead of installing a PBX in your building, the phone company lets you share its big switch downtown and use it as your own. This sharing scheme can have significant advantages in reduced up-front costs, reduced maintenance costs, improved growth potential, and excellent reliability.

The types of Centrex services offered vary widely around the country. The most sophisticated use digital telephones and digital transmissions throughout the system. Older Centrex installations (like older PBXs) are analog voice systems that use modems to move data. Local telephone companies view Centrex as a way of holding onto business customers who might otherwise bypass their services, so installing a digital Centrex service will probably be more popular than upgrading a PBX system. If your organization uses Centrex, you should ask the phone company that installed it whether it also offers data communications. The latter service is often referred to as a Central Office Local Area Network, or CO LAN.

Prices for these systems vary widely. Full-featured digital systems can cost more than \$1,000 per port to buy or an equivalent monthly amount to lease.

SIMULTANEOUS ACCESS Although circuit-switching schemes allow basic file and equipment sharing, they do not offer the most sophisticated and effective form of data sharing: simultaneous multiuser access. Allowing multiple users simultaneous access to the same data files without

overwriting or destroying one another's work is a network's toughest job, but it pays the greatest dividends in increased productivity. One example of this type of access would be an airline or hotel reservations system, in which clerks are constantly inputting data and requesting information from the central database. They need to do both quickly, and more than one clerk may need to refer to the same record at the same time.

Three categories of systems give users simultaneous access to the same data files: local area networks, minicomputers, and mainframe systems. Even though these systems use very different connection schemes, the distinction between them can grow fuzzy. For example, several local area networks use fairly powerful minicomputers as network servers. But without splitting hairs, let's take a look at these sharing alternatives.

LOCAL AREA NETWORKS As mentioned before, workstations in a PC LAN rely on a permanent physical connection between workstations but take turns using the media. This scheme allows PC LANs to share resources while still maintaining the benefits of local processing with a few caveats.

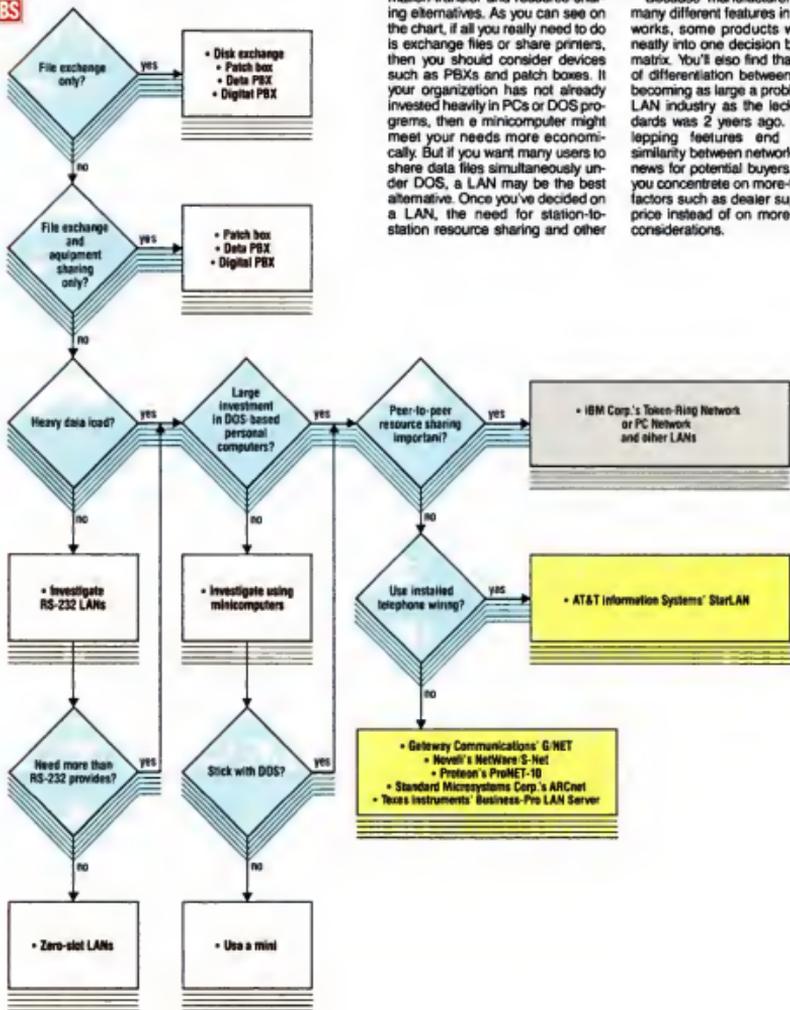

Most LANs today are used to exchange files, but this purpose alone would not justify paying the average installation cost of about \$1,000 per workstation. Although sharing expensive equipment like laser printers and vertical plotters is probably the best economic justification for installing a LAN, using a LAN to access a multiuser database will probably yield the greatest productivity gain.

Consequently, the most important factors in choosing a LAN relate to the applications programs and the network software that allows you to run them (see "The Software Key to LANs"). Other factors to consider include the type of wiring (or media) used. Wiring can be a major factor in the installation cost of the LAN. The electrical environment in which your system is installed determines the kind of wiring you should use. The physical configuration (topology) of the network affects how easy the system is to maintain (see "Connectivity: LANs and Beyond").

Because the network software and

The Connectivity Decision Guide

This chart is designed to help you select from among the many information-transfer and resource-sharing alternatives. As you can see on the chart, if all you really need to do is exchange files or share printers, then you should consider devices such as PBXs and patch boxes. If your organization has not already invested heavily in PCs or DOS programs, then a minicomputer might meet your needs more economically. But if you want many users to share data files simultaneously under DOS, a LAN may be the best alternative. Once you've decided on a LAN, the need for station-to-station resource sharing and other

factors will influence your network purchasing decision.

Because manufacturers include many different features in their networks, some products will not fit neatly into one decision box in this matrix. You'll also find that the lack of differentiation between LANs is becoming as large a problem in the LAN industry as the lack of standards was 2 years ago. But over-leaping features and technical similarity between networks is good news for potential buyers. It will let you concentrate on more-traditional factors such as dealer support and price instead of on more-technical considerations.

NETWORKING OPTIONS

hardware are so closely interwoven with the operating system and interrupt hardware of the PC, potential incompatibility and conflicts may arise on several levels. We have found networking cards that could not be on the same bus with certain models of video boards, networking software that would not coexist with RAM-resident programs, and processors that literally ground to a halt under the network load. Our experiences should serve as a warning that installing and maintaining a network requires considerably more than just plugging in some cards and hooking up a few cables.

MINIS AND MAINFRAMES In a permanent, hard-wired connection scheme, like that between terminals and minicomputer or mainframe systems, the host computer switches messages or data between terminals and devices almost on a bit-by-bit basis. But the media is neither shared nor switched.

A mainframe or minicomputer may be the best choice if you need to establish several simultaneous sessions for database inquiries, electronic mail, and other jobs. These systems are also efficient for long, dedicated file transfers and for fast, highly interactive operations such as databases. In addition, they can store huge amounts of information.

Mini and mainframe computers use multiuser operating systems (which today's PC-DOS is not) with their dedicated connection schemes, although some large mainframe installations may use contention and queues to allocate access ports. These operating systems can handle the file- and record-sharing, security procedures, electronic mail, and other essential features that are needed in a multiuser computer system. Unfortunately, some proprietary multiuser operating systems offer few compatible applications programs. One appeal of the UNIX operating system is that it can run on multiuser computers from many different manufacturers. Like that of the DOS 3.1 networking standard, UNIX's broad base attracts applications programmers.

Both the price and size of powerful multiuser minicomputer systems are shrinking like brand new Levis in hot water. Companies such as Digital Equipment

Corp., NCR Corp., Convergent Technologies, and IBM Corp. are offering mini-computer solutions that have cost advantages over PC LAN systems for as few as three or four stations—provided that you don't already have a major investment in PCs, software, and data files.

These companies are also developing systems that will allow interactive computing between PCs linked together on a network and larger hosts. This age of invisible interaction between local PC and remote host programs is 1 or 2 years away, but as it nears it will displace some of the appeal of today's LANs.

OLD PROBLEMS While offering the benefits of sharing databases, files, and equipment, powerful LAN systems and mini and mainframe hosts resurrect many of the old data processing problems. The main problem is programming backlog in corporate ADP installations. Standalone micros short-circuit this problem by making you responsible for your own programming. But by adding the layers of software for a multiuser system (LAN, minicomputer, or mainframe), you increase the need for frequent modifications to those layers, and hence create the potential for a programming backlog.

Other rediscovered concerns include security risks, accidental pollution of the database, lack of standardized formats for data, slowdowns caused by overloading the computing power, and the need to standardize screens and menus.

Modern networking and multiuser computer software should be designed to help you avoid or cope with these and other problems. A large part of our evaluation is aimed at finding out how much of a programming and administrative workload the network creates.

LOOKING AHEAD This overview of information-transfer schemes has contrasted several different ways to move data. As you've probably surmised, local area networks aren't a perfect economic or operational fit for many applications, but they are a reasonable solution for a wide variety of tasks. If you have considered the alternatives and think a PC LAN might meet your needs, follow us as we explore the products in the marketplace. □

COMPANY

564 CASTRO ST., SUITE 487 SAN FRANCISCO, CA 94114
 a division of MCS, Inc. Computer Software Specialists since 1961

Enlarged Shift keys

Two Ctrl and Alt keys for ambidextrous access.

Positive-tactile, firm-feel keys.

12 Function keys for increased automatic operation.

Extra-wide, easy-to-find Return key. IBM changed sizes again by shrinking their Return key.

Dedicated Function Control keys.

Caps, Num and Scroll Lock indicator lights. IBM has no lights on their XT.

Separate dedicated Numeric Pad with enlarged Enter key, four Arithmetic Function keys.

Switch-selectable compatibility with IBM, PC, XT, AT, PCjr, AT&T and all compatibles. IBM's new Enhanced Keyboard fits only on their new XT's, AT's and ignores their installed base which probably includes you.

Switch allows you to swap position of Ctrl and Caps lock. IBM moved Ctrl to bottom row, you have no choice!

Isolated Escape key

Separate Cursor and Screen Control keys.

Here it is...DATADESK'S TURBO-101 ENHANCED KEYBOARD for the 10 million PC users IBM just ignored!

IBM just announced their new redesigned "standard" keyboard for personal computers. There's only one problem: it won't work on your IBM computer if it was purchased prior to June 1986 or any PC compatible purchased at any time!

Not to worry. Our new Turbo-101 Enhanced Keyboard gives you the layout and enhancements of the IBM with some logical improvements (see above photo). And it works on your existing PC, XT, AT, PCjr, AT&T, Epson and virtually all compatibles!

Get Borland's Turbo Lighting™ FOR FREE!

To really turbocharge your productivity, we are including, free-of-charge, Borland's red-hot Turbo Lighting software with each keyboard. Now, when using SlideKick, WordPerfect, Micro-soft Word, 1-2-3 or most popular programs, our Turbo-101 Keyboard will check your spelling as you type, gives you instant access to Random House's 80,000-word Concise Dictionary and 60,000-word Thesaurus and much, much more!

"Lightning's good enough to make programmers and users cheer, executives of other software companies weep," says Jim Seymour of PC Week. Sold separately, Turbo Lighting retails for \$99.95!

The Turbo-101 is the best data entry tool since the pencil!

For users of spreadsheets like 1-2-3, the Turbo-101's separate cursor controls and numeric keypad makes entering numeric data into calls and moving from call to call as natural as moving your fingers. And for word-processing, the 'Salectric' typewriter layout makes the Turbo-101 as easy to use as a pencil; and with the extra large Enter, Shift & Control Keys, you'll make so few mistakes, you won't even need an eraser!

SPECIAL OFFER! ONLY \$149.95* FOR BOTH KEYBOARD & SOFTWARE

Includes 30-day money back guarantee and 2 year full warranty. To prove that we don't ignore you or your pocketbook, you get our Turbo-101 Enhanced Keyboard and Borland's Turbo Lighting for an astounding \$149.95.* No, you didn't get it wrong. During this amazing Introductory Offer you get both keyboard and software for less than most software programs by themselves! Now, if you're still feeling ignored, you can always do what you-know-who wants you to do...and buy a new computer to get their keyboard!

Up to now, DataDesk International may be one of the best kept secrets, but here's what's being said about our first end-user Keyboard/Borland software bundle:

"Who Can Pass Up a Deal? Department. Talk about an aggressive product!"
John C. Dvorak, InfoWorld Mar 86

"It solves all of the problems exhibited by their regular PC/XT keyboard...it's a great bargain!"
PC Productivity Digest May 86

"DataDesk fell, has designed a sturdy and handsome keyboard that has little response...is the hardware bargain of the year" says Choice Weekly, Oregonian Jun 86

"The best part of the keyboard is the way it feels. It's ideal! And just. I've never worked on a keyboard with a nicer touch."
Business Computer Digest Aug 86

"It's a good keyboard. Good feet, the keys have tactile feedback. No mind at all. This is about as good a keyboard deal as you're likely to find...I have absolutely no hesitation in recommending the Model PC8700."
Jerry Posenoff, Eye Magazine Sept. 86

"This keyboard is used to type on and feels solid. It has tactile feedback built in. I can type much faster on it."
Test Drive Scorecard: DataDesk-10 Key Tronics-9 Teleconnect Magazine May 86

...ABOUT ANALYZING YOUR DATA.

You might be spreading your spreadsheet a little too thin. Or maybe you're starting from scratch. But if you're serious about data analysis, you're ready for SPSS/PC+™ — a full software family that brings you six high-powered ways to complete any data analysis task.

Enter it. SPSS/PC+ Data Entry™ takes the effort out of entering and correcting data.

Analyze it. The SPSS/PC+ Base Package provides a powerful array of statistical and reporting procedures.

Examine it. SPSS/PC+ Advanced Statistics™ lets you get more serious with your data.

Table it. SPSS/PC+ Tables™ produces presentation-ready tables instantly.

Chart it. SPSS/PC+ Graphics™ featuring Microsoft® Chart creates show-stopping graphs and charts.

Map it. SPSS/PC+ Mapping™ featuring MAP-MASTER™ — our latest option — creates maps where vast amounts of data can be summarized and presented in one, simple picture.

SPSS/PC+ products are being put to productive use by serious fact finders in business, government and education. For countless purposes such as market research, Wage and salary studies, Survey analysis. And quality control. Plus each product is superbly documented and supported by SPSS Inc., a leader in statistical software for nearly 20 years.

So if you're serious about data analysis, step up to SPSS/PC+. For details, contact our Marketing Department.

MAKING CONNECTIONS

LANs Under NetWare

Late one night, in a room smelling of hot hardware and cold pizza, a lonely PC Labs technician cried out, "So many things can go wrong!" While many people can identify with that lament, it is the theme song of every local area network evaluator. Slightly different versions of DOS on the network stations, bad cables, bad connections, and one improper keystroke by someone who signed on with the supervisory password can all bring a network to its knees.

Although we were well aware of the obstacles, last May PC Labs began the grueling task of evaluating local area networks. In this issue, we give you the results of our testing for six products running under Novell's *NetWare* networking software: AT&T's StarLAN, Gateway

Complexities plague even the best of LANs.

To guide you through, we review and benchmark-test six networks running Novell's networking software to show how these systems stack up under the toughest real-life conditions.

COVER STORY
FRANK J. DERFLER, JR.

Communications' G/NET, Novell's NetWare/S-Net, Proteon's ProNET-10, Standard Microsystems Corp.'s ARCnet, and Texas Instruments' Business-Pro LAN Server. Since it is the networking software that largely determines the way the product appears to the user, we included a review of *NetWare*. (Our results indicate that many of the differences between the products tested are related more to the version of *NetWare* used than to variations in the hardware.) We will continue to provide evaluations of other networks running under different vendors' networking software in future issues.

OFFICE AUTOMATION
PC Labs designed the tests of local area networks to exercise the products in a true-to-life manner. Generally, busi-

LANs UNDER NETWORK

nesses use PC LANs for two purposes: office automation or transaction processing. Office-automation tasks combine a heavy word processing load with spreadsheet, graphics, and some database work. The transaction processing environment uses database applications programs for such functions as inventory control, accounting, and customer support.

Each of these functions exercises the network in different ways that we try to simulate in our evaluations and benchmark tests. People working in an office frequently switch tasks and look for different bits of information with their PCs. Phone calls and visitors interrupt office workers and change their priorities. They may change tasks and/or their desks frequently and should be able to access their own programs and files wherever they move.

A network serving the office environment must, therefore, be flexible and easy to reconfigure. The software must work with RAM-resident programs such as *SideKick*, transfer files between workstations easily, and furnish office productivity tools like electronic mail. Since office networks seldom transmit large amounts of data at once, speed is not a major factor as long as the system meets some minimum level of efficiency.

TRANSACTION PROCESSING The opposite is true in transaction processing. While flexibility may not be a big consideration for a transaction-processing application, speed and capacity are crucial. The work is more likely to be structured than creative, and in many types of network systems with 12 or 15 workstations sharing a PC AT-type server, the amount of work created can be enough to cause a significant communications backlog.

The way you judge a network will depend on your individual application. The applications software, networking software, workstations, the server, and network interconnection devices add different pieces to the performance of the network as a whole. For example, while many of the networking software features determine the flexibility of the system, the interaction between hardware and software determines its speed. Our tests, therefore, try to exercise these pieces individually and together to determine their effect on net-

Benchmark Test: LANs Under NetWare

The critical factor for all of these benchmark tests is the speed degradation that the network demonstrated under load. Some networks, such as the Ethernet-based Texas Instruments system, executed the standard tests quickly under lightly loaded conditions but slowed down under heavier loads. The token-based ARCnet system from Standard Microsystems and the directly connected NetWare/S-Net system from Novell did not start out fast, but they degraded only in small, predictable steps under load.

Network Speed Under Contention Test

Product	Performance Times (Times given in seconds and decimal seconds)				
	Zero Stations	One Station	Two Stations	Three Stations	Four Stations
Business-Pro LAN Server	41.11	88.07	109.87	129.49	153.48
G-NET	54.65	74.20	85.84	106.25	134.20
ProNET-10	58.96	64.48	68.60	92.25	124.27
NetWare S-Net	71.00	83.70	94.29	103.71	115.68
StarLAN	58.41	70.12	75.68	81.86	93.48
ARCnet	59.45	82.14	87.83	78.21	92.56

Network plus Server Cruncher Test

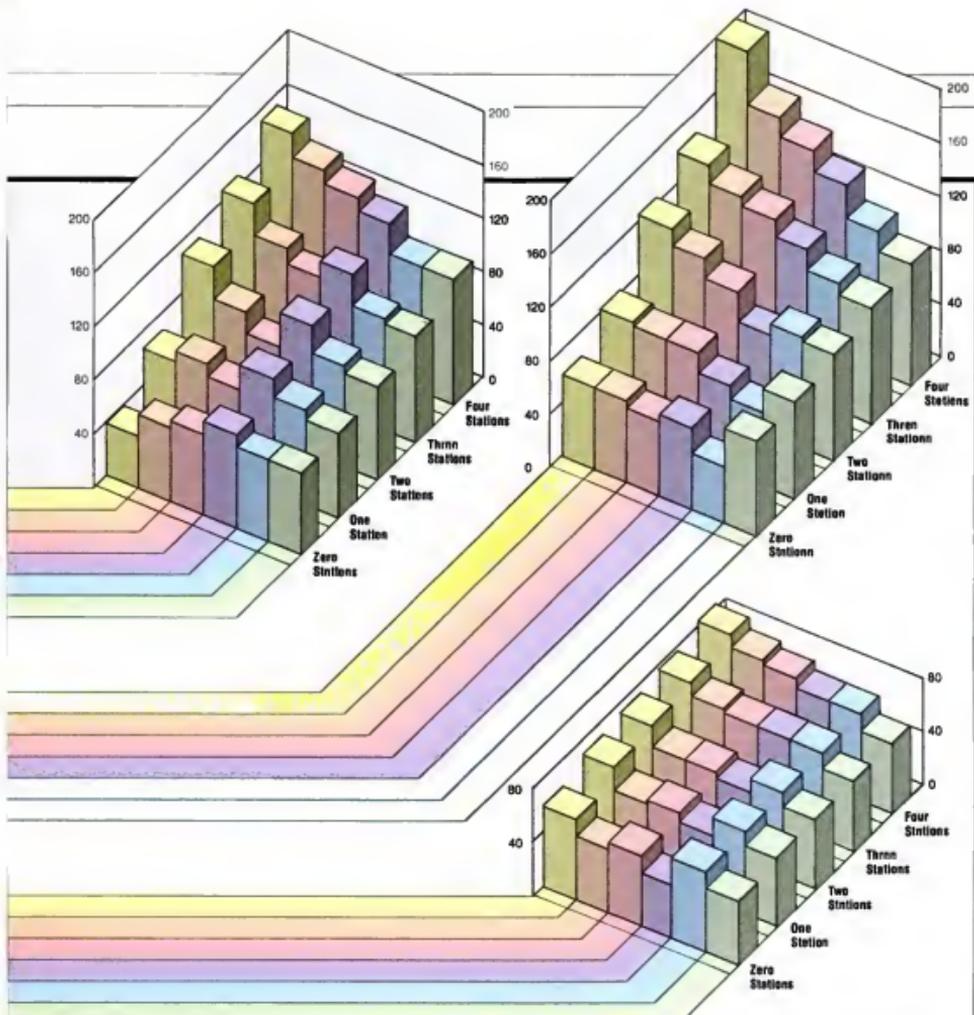

Product	Performance Times (Times given in seconds and decimal seconds)				
	Zero Stations	One Station	Two Stations	Three Stations	Four Stations
ProNET-10	58.96	82.50	125.12	143.37	200.30
StarLAN	58.41	80.47	112.00	131.28	158.65
G-NET	54.65	81.02	98.02	122.31	145.77
ARCnet	59.45	65.85	73.87	110.65	128.63
Business-Pro LAN Server	41.11	54.43	82.63	93.47	104.85
NetWare/S-Net	71.00	73.05	79.45	86.87	91.00

Smart Applications Test

Product	Performance Times (Times given in seconds and decimal seconds)				
	Zero Stations	One Station	Two Stations	Three Stations	Four Stations
G-NET	80.07	70.00	73.00	77.00	85.00
ProNET-10	46.50	52.50	57.50	87.00	75.00
StarLAN	51.50	54.50	58.50	63.00	72.00
Business-Pro LAN Server	41.00	47.50	52.00	62.00	65.00
NetWare S-Net	61.00	61.00	62.00	63.00	64.00
ARCnet	47.00	49.50	49.50	50.50	50.80

PC Labs used the same 8-MHz IBM PC AT as the server for the benchmark tests on the Gateway, ProNet, Standard Microsystems, and AT&T networks Texas Instruments and Novell provided their own servers for their networks. We configured all of the servers to operate only in the dedicated mode and not as dual-purpose server/workstations. The benchmark tests were run using a network of three IBM PCs, one IBM PC AT, and one IBM PC XT as workstations. All networking software was installed using the default configurations. No attempt was made to "fine-tune" the buffers or other parameters to achieve better performance in any one test.

For both the **Network Speed Under Contention** and **Network plus Server Cruncher** benchmark tests, the dependent variable is the time it took for the IBM PC XT on a LAN to perform a standard set of DOS read-write commands against a single data file residing in the server. The independent variable was the network load. We began with the heaviest load, four network workstations running DOS batch files, asking for constant reads of data files from the server. Then we decreased the number of stations one by one to reduce the network load. The three-dimensional chart on the right shows the time it took the XT to perform the test under the varying network load on each network. For comparison, we give the time it took to run the same test on the XT's internal hard disk (Zero Stations).

The difference between the Network Speed Under Contention test and the Network plus Server Cruncher test lay in the size of the data blocks that the workstations moved over the network.

The Network Speed Under Contention test exercises the network when the network interface cards and the media are heavily loaded. We attempted to eliminate the factor of server disk access time from this test by loading the network with data blocks small enough to reside in the server's cache memory on most systems. In addition, we varied the size of the data files to detect any cache limits.

The Network plus Server Cruncher test heavily loads the network interface cards, the media, and the server's disk drive access system. In this case we used data blocks of various sizes, some small,

some large, when we loaded the network in order to exercise the hard disk drive access system. The results are influenced by hard disk performance and the efficiency of the networking software as it moves data on the disk and between the disk and the network interface cards.

During both of these tests, we used a hardware clock residing on an AST Six-Pack card in the XT to determine the starting and ending times. We did not use the system clock because its operation can be disturbed by some network functions.

The Smart series of integrated networked programs from Innovative Software gave us a practical way to evaluate networks under the load of typical applications. In fact, viewed on a system monitoring

screen, such as FileWren's, the **Smart Applications** benchmark test looks and acts like a busy office, because the level of activity varies between intense use of the network and quiet periods when processing takes place.

For the dependent variable plotted on the three-dimensional chart, we used an IBM PC-XT operating Innovative Software's Smart DBMS running a script file that indexed and sorted shared database records. The independent variable was one through four workstations running another script from Innovative Software that created bursts of activity interspersed with periods of silence.

■ LANs UNDER NETWARE

work efficiency and performance.

We dedicated a standard testbed of six machines—three PCs equipped with dual floppy disk drives, one XT, and two new 8-MHz ATs—to the task. If a network vendor did not provide a specialized server, one AT acted in that function. At some time during every test, we rotated a Zenith Z-150 and an ITT Xtra in place of a PC to test the compatibility of the network with non-IBM hardware.

In order to maintain more consistency in the testing, the same team of reviewers evaluated every product. And because it isn't possible for these reviewers to test the products at the same time, we froze as many variables as possible to ensure the integrity of the tests, then tested the networks one at a time.

The following are the factors upon which *PC Magazine* based its network evaluations. For each of these factors, we gave each LAN a rating of poor, fair, good, or excellent. You'll find the results in the table, "LANs Under NetWare: Summary of Features." The benchmark tests, which evaluated the systems' speed with varying numbers of workstations, can also be found in this article.

TURNKEY INSTALLATION Some vendors give you all the equipment you need to get up and running on two, three, four, or six workstations, including customized disks ready to boot on each machine. Our evaluation indicates whether turnkey installation is available and indicates the amount of work involved in installing such a system. We gave an excellent rating to a system requiring nothing more than "plug and play."

MENU-DRIVEN INSTALLATION Many companies have developed their own tutored or menu-driven installation system. An excellent menu-driven installation program carefully describes or illustrates any hardware switch or jumper settings required, explains the process of configuring workstation disks (if required), and suggests default settings for all selections.

DOCUMENTATION Even with menu-driven programs, you need good documentation. Excellent documentation in-

cludes a table of contents, a good index, a glossary, illustrations, and accurate instructions.

NETWORK ADMINISTRATION All networks require some daily or weekly attention to configure the software to meet the changing needs of the user. Based on our experience with the product, we estimated how many hours the network administrator would spend monthly to perform the following tasks:

- Create two new workstation boot disks.
- Add ten new subdirectories for network users.
- Transfer ten files from each of five directories into five new subdirectories.
- Re-tailor the log-in scripts or batch command files for ten users.
- Reconfigure the spool files and change any drivers needed for one new printer.
- Change all passwords once.
- Change all of the system parameters that are required to arrange the number of files

PC EDITOR'S CHOICE

ARCnet has been available since the 1970s, and in Standard Microsystems' version of ARCnet for the PC, experience and quality go hand in hand. ARCnet is easy to install, resists degradation under heavy loads, and assures successful data transmissions by including an error-checking and retransmission protocol. Other LAN vendors that understand technology and look for reliable performance repackage ARCnet boards with their systems. For example, Novell uses ARCnet boards to extend its NetWare/3-Net system. In addition, ARCnet interface cards marketed by several different manufacturers work together without a hitch. Although we also love the hardware of Novell's NetWare/3-Net, the Standard Microsystems package combined with a modern 80286 server offers more flexibility at a lower cost and with similar performance.

that can be open at any one time.

- Redefine user rights to five subdirectories.

NETWORK STATUS REPORTING

Every station should be able to access information about the active users on a network and the devices available for common use. The network supervisor should have detailed information on network performance and problems. To gain an excellent rating, the network supervisor should be able to determine the following:

- The percentage of network server CPU utilization
- The number of bad transmissions over a time period
- The activities of individual stations
- The status of shared peripherals

SECURITY Security is critical for transaction-processing applications, such as inventory systems. A security system should do more than simply allow or deny access to files. An excellent system allows the supervisor to designate different levels of access to each user, ranging from the ability to read-only through the ability to add to, delete, and create files.

WORKSTATION OPERATION Users address networking programs through DOS-like commands or through menus. PC Labs rated the interfaces' features and ease of use for nonsupervisory users. To earn an excellent rating, the system should have menus or a command structure similar to 1-2-3, in which you put the cursor on the command and hit Enter or type the first letter of the command. Systems with good pull-down menus and icons (like *Microsoft Windows*) would also qualify.

STATION-TO-STATION TRANSFER

Businesses commonly cite the need to transfer text or spreadsheet files from the local disk drive on one station to that of another as one of their reasons for purchasing a LAN. This is a LAN application in which speed is secondary to ease of use. We evaluated the ease or difficulty of this procedure subjectively and gave higher ratings to networks that allow direct, station-to-station transfer of data than to those that require moving data between subdirectories on the server.

PRINTER SPOOLING/QUEUING

Printer sharing is another important reason for purchasing a LAN. We tested the products by creating three print jobs on three different workstations and sending the output to the system printer nearly simultaneously. We then evaluated printer spooling and queuing on functionality and ease of use.

Excellent printer-sharing capabilities allow unmodified applications programs (such as a word processor) to send their output to COM1 and then to spool and queue the work without further intervention by the user. The spool and queue should not be destroyed if the printer should happen to fault.

■ Using the LAN to communicate, instead of passing notes or making phone calls, can enhance productivity in an office.

PEER-TO-PEER COMMUNICATIONS

Using the LAN to communicate, instead of passing notes or making phone calls,

can enhance productivity in an office. Communications between stations take two forms: electronic-mail programs, which store and forward messages, and real-time messages, which replace telephone calls. These forms of communications serve very different needs, and both must be present in the system and operate effectively for the system to earn an excellent rating in our tests.

NETWORK DIAL-IN The ability to call into the network through a modem is valuable in office systems. This feature lets the network automatically answer incoming calls, allowing access to the network from within the limits of security and the tele-

PC LANs Under NetWare: Summary of Features

PC — Indicates Editor's Choice. ● — Yes () — No

Few differences exist between the products evaluated in this table because all ran under some version of Novell's NetWare. The only real differences, such as G/NET's lower rating for ease of use, stem from the absence of some menus in the older version

of NetWare provided with the system. Installing new workstations with the G/NET and ARCnet systems took slightly longer than with the other systems because the boot program must be customized for each workstation in these systems.

■ LANs UNDER NETWORK

phone line without any dedicated hardware except the modem and serial port. We tested this function using a Hayes modem connected to the server (if possible) or another network station. We also tested the function under heavy network load to discover speed degradation in the communications port or the network.

COMPATIBILITY WITH RAM

RESIDENTS RAM-resident programs such as *SideKick* and *ProKey* enhance office productivity. PC Labs tested whether the network would run RAM-resident programs by loading *SideKick* and *ProKey* into every workstation during startup. Then we tried to use the RAM-resident programs while the workstation was communicating with the network. If we encountered no problems, we noted that the system was compatible.

SMART SOFTWARE TEST

We tested for compatibility between *The Smart Software System* integrated package and the network. In addition, we used *Smart* to test the network under the load of a normal application. For speed results of the *Smart* test, as well as other benchmark timing tests, see the PC Labs benchmark tests results in this article.

DBASE III PLUS TEST

We also performed a test for compatibility between the widely used *dBASE III Plus* networked DBMS (database management system) and the networking software. In addition, our workstations attempted to simultaneously read, append, and sort, in order to test the software's file- and record-locking operations.

R:BASE 5000 TEST

We tested for compatibility between the widely used *R:base Series 5000* networked DBMS and the networking software. Several of our workstations read, appended, and sorted the same record to test the software's file and record locking.

AND ON TO THE REVIEWS

For a more detailed discussion of the pieces that make up each network, how you set up and configure them, the features they include, and more, read on. The reviews of each product are included in this section.

Novell's NetWare

Orem, Utah—far from Silicon Valley or Boston's Route 128 corridor—is hardly a place where you would expect to find a hotbed of computer activity. But Orem is the home of the most successful maker of networking software for PCs. Novell claims that over 44,000 LANs serving more than 300,000 workstations run under the LAN software they call *NetWare*. More than 20 companies, including all those whose products are reviewed in this issue, sell Novell's *NetWare* with their network hardware. The newest versions of *NetWare* also allow for its installation on many networks that come with their own software, such as those of IBM Corp., AT&T Information Systems, and 3Com Corp.

MANY NETWORKS

Novell currently markets three versions of *NetWare*. *Advanced NetWare/86* runs on most networks with servers that use the 8086/88 processor. *Advanced NetWare/286* has modifications that allow the 80286 microprocessor in the IBM PC AT and AT compatibles to run in protected mode, in

which it can use extended memory efficiently. And *SFT NetWare (System Fault Tolerant NetWare)* allows the software to continue functioning in the event that one or more of the system components fail. In addition, *NetWare* comes conveniently adapted to and bundled with many other vendors' network hardware.

Like all networking software, *NetWare* is really a series of programs. The thick package of disks in the distinctive red Novell box includes electronic mail, security, status monitoring, printer spooling, tutorial, on-line help, and other programs that are optional or unavailable on some other LAN systems.

FUNCTIONS OF NETWORKING

SOFTWARE There are two primary functions of all networking software: network input/output and disk management. The software must exchange data with the network interface and allow multiple workstations to use the server's disk drive capabilities.

Novell has a large library of driver programs that control network I/O and can work with network interface cards from many vendors. To install the driver for your system, you simply select the appropriate driver from a menu. Some network vendors preinstall the drivers when they bundle *NetWare* with their hardware.

NetWare uses several techniques that improve network function by improving the performance of the server's hard disk drive. A *directory-hashing* technique indexes directory entries according to a mathematical formula for fastest retrieval. *Elevator seeking* is the unlikely name for a well-planned feature that looks beyond the immediate movements of the disk drive head and arranges the next ones in the most economical manner. And *NetWare's disk-caching* system can significantly improve performance by storing several sectors of

EasyLAN—Networking For Less Than \$100 Per PC

STOP buying expensive duplicate PC peripherals. Usually your peripherals just sit idle. If your office owns two or more PCs can you justify costly laser printers for each PC? How often are your printers actually busy? Thirty minutes a day? An hour a day? Even your expensive hard disks are used infrequently.

The obvious solution to avoid expensive duplicate peripherals is a local area network that allows you to share printer and disk drives. But until now LANs have cost in excess of \$1,000 per PC.

The EasyLAN™ OFFICE NETWORK

Each PC shares printers and disk drives between IBM PCs. EasyLAN can save you \$1,000 or more per PC by eliminating duplicate equipment purchases.

EasyLAN HIGHLIGHTS

- EasyLAN shares printers, plotters, data, and disk storage
- PC to PC file transfer
- Print spooling
- New PBX support
- Easy to install
- Easy to operate
- Modem support
- Performs in the background

EasyLAN's low price matches the small business user's cost-sensitive budget. It is the office network solution for less than \$100 per PC including cables and software for a 2 PC or 3-PC network.

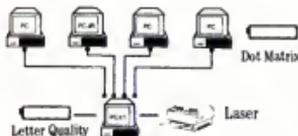

EasyLAN performs its operations concurrently in the background. EasyLAN communications, file transfers and printer operations all take place while each PC simultaneously performs such normal DOS applications as Lotus 1-2-3,™ WordStar,™ and dBASE.™

"I bought access to a laser jet printer for \$80."

—CONOCO Oil User

Disk sharing uses EasyLAN's EECOPY command to move files to and from PCs. ASCII or binary files can be transferred in the foreground, or in the background while other DOS programs run.

All communication operations are protected by a unique password assigned to each PC so security is maintained.

EasyLAN Office Network

EASYLAN SPECIFICATIONS

Each PC in the network requires an individual licensed copy of the EasyLAN program and takes 20k of memory on each satellite PC, a serial port, and DOS 2.0 or above. EasyLAN disks are not copy protected. EasyLAN runs on all IBM PC models and Compatibles. The HUB PC requires a serial port for each satellite PC. The COM2 and COM6 boards are serial port expansion boards which permit you to add serial ports to the HUB PC.

EASY TO INSTALL

EasyLAN can be installed in less time than it takes to enjoy your coffee break. Just plug the EasyLAN cables into existing serial ports. The EasyLAN Network Configuration Program provides a menu driven installation program that will guide you step-by-step through the software installation process.

EASY TO ORDER

EasyLAN is a proven product with over 12,000 installations. To order just call toll free **800/835-1515**. Start with a two PC network and expand as your needs demand.

"If it does all you need why spend more? It is the ultimate example of practicality in a local area network."

—PC Magazine

PRODUCT SUPPORT

We take pride in our quality product support. EasyLAN support is provided over the telephone by the same people who installed over 12,000 networks last year.

"I look for products that make my job easier and save my company money. EasyLAN does both."

—Mini Micro Magazine

NEW PBX SUPPORT

New PBX support allows EasyLAN to transfer data files and share peripherals between PCs using PBX circuit switched connections and twisted pair wiring. EasyLAN has already been installed on a number of different PBX systems and has been certified by Northern Telecom on the Meridian SL 1.

EasyLAN's performance meets your small office or department requirements to move word processing documents and spread sheets between PCs. For example, EasyLAN can transfer a 10 page document between PCs as a background operation, in less than one minute.

EasyLAN loads automatically at boot time. It manages the PC's serial and parallel ports for communications and printing.

"The value is high."

—InfoWorld Report Card

Printer sharing operates transparently with existing programs. Print files are automatically spooled to disk and scheduled for printing. Multiple printers per PC may be designated for specific office tasks.

LANs UNDER NETWORK

data from the hard disk in a memory buffer. These features are important because, typically, networks are not limited by the speed of transmission through the media but by requests for access to the server's hard disk.

NerWare formats the server's hard disk drive in a manner very different from the formatting used by DOS. You can, however, partition the disk so that a portion remains in DOS format should you wish to use the server as a local workstation. Because of the unique disk formatting, only specified machines can be servers on a Novell network. In contrast, products such as *Tapestry* (from Tonus Communications, New York City) or IBM networking software allow any workstation to work as a server, contributing such resources as a hard disk to the network. Novell's approach achieves better performance and security, while versions of the shared-resource approach such as those used by IBM and *Tapestry* improve LAN flexibility and facilitate redundancy for backup.

SYSTEM SECURITY Networking software commonly provides system security. Under *NerWare*, the system administrator can either allow or deny individual users the ability to read, write, create, delete, search, and modify files. You can choose to assign passwords or not, and you can easily change passwords and permissions using commands or menus.

Wise system administrators make sure passwords are protected and frequently changed—a precaution that Novell considers very important. Unlike most other network operating systems, Novell's system is arranged so that no one can access the files except through the password and security system. So, a vandal or snoop can't view or edit the disk files merely by gaining physical access to the server and rebooting it under DOS.

SPECIAL FEATURES Other *NerWare* features make your network more than just a way to swap files. *AdvancedNerWare* responds to the file- and record-locking commands of DOS 3.1. Therefore, database-management applications such as *dBASE III Plus* or *The Smart Software System* can give multiple users access to the same files without corrupting the database. We

benchmark-tested the operation of *dBASE III Plus*, *Smart*, and *R:base Series 5000* running under several versions of *NerWare*. While our tests were not exhaustive, we ran many of the commonly used file- and record-locking routines and received the right DOS 3.1 responses from the *NerWare* operating system. *NerWare* also includes a NETBIOS emulation module for applications that make direct calls to the Microsoft NETBIOS (see networking software article—"A Software Key to LANs").

A common reason for purchasing a LAN is to allow several workstations to share one or more printers. The print spooling capabilities of network software allow workstations to send files to the server, which then routes the file to a designated printer. The printer spool queues the jobs waiting for a printer and then sends them to the printer, along with all of the formatting, graphics, form-feeds, and other instructions from your applications program. Earlier *NerWare* versions required you to issue an awkward "end-spool" command to send your job to a printer, but

AdvancedNerWare handles spooling and printing smoothly. It also creates a header for each job to help route it back to the right person when a printer is shared by many users.

NerWare also features an electronic-mail system that comes installed and is ready to run when you bring up the server. The electronic-mail system allows you to exchange files, documents, letters, and memos. Documents are usually word processing files containing formatting information, letters are straight ASCII files, and memos are short notes typed on-line.

NerWare's mail system works well and the commands are simple, but the format isn't intuitive or obvious. Instead of responding to menus, as in conventional mail systems such as MCI Mail and CompuServe, you enter commands as text. A special context-sensitive help system is supposed to evaluate your request for help and make an appropriate response, but the responses aren't always helpful. New or infrequent users will either need to study a book or be trained to use the mail system.

SNIPES: A LITTLE NETWORK FUN

Novell has included the shoot-'em-up maze game Snipes in its networking software to let programmers have some fun as they administer the network.

On mainframe computer systems, it's not uncommon for software companies to include "programmer's treats" with a commercial application or operating system. The best known treat for bored programmers is the original game of Adventure. This tradition has carried over to the microcomputer industry. *WordPerfect*, for example, includes a game called Beasts with its library system. And now networks have the bug, too, with Novell's inclusion of the popular game Snipes in its *NerWare* networking software.

Snipes is an addictive shoot-'em-up maze game. You use the keyboard to move around a large maze while dodging enemy fire and shooting the snipes as they threaten your existence. To keep

players in view, you can pan around the maze. In the networked version of Snipes, called NSnipes, many people can play in the same maze. That makes the game even more fun, because players on different workstations can team up to hunt snipes or play against each other to settle programming grudges. Even on the network, screen I/O is so fast that you see the action as quickly as if you were the only player. And if you want to challenge yourself, NSnipes offers different levels of play, giving you such options as deadly walls and ricocheting bullets and allowing you to vary the aggressiveness of your opponent.

It's nice to see that Novell likes to serve up a little fun with its network.

—Ed Halbert

Family Affair

Choose from a family of 4 modems -- the 1200 baud modems at \$139 & \$149, and the 2400 baud modems at \$299 -- that offer unbelievably great performances and make you wonder why everyone else charges so much!

2400 Baud Modem:

Internal Modem: Modular Phone Cable, Mounting Bracket, COM1 or COM2, Asynchronous Communications
External Modem: AC Power Adapter, Stand Alone Enclosure, Status Indicator LED, Asynchronous Or Synchronous Communications
Both Units: Hayes Compatible Command Set, CCITT V.22/V.22 bis and Bell 212A Compatible, 110/300/600/1200/2400 bps Operation, Automatic Adaptive Equalization, IBM PC Hardware Compatible, Two RJ-11C Jacks (Alternate Voice/Data Communications)

1200 Baud Modem:

Internal Modem: Two Jacks, Line Input and Phone Jack, RS-232C Port COM1 or COM2, Speaker with Volume Control
External Modem: 8 Status Indicator Lamps, Sleep Off Front Switch Panel, Speaker with Volume Control
Both Units: Bell 103/212A 300/1200 Baud, Fully Hayes "AT" Command Set Compatible, Modular Phone Cord, PC-TALK III Software

Podigree

You can be sure that the Qubie' family of modems are of good stock. Our latest editions, the 2400I Internal Modem Card and 2400E External Modem are proof positive what good breeding can accomplish. These state-of-the-art modems are CCITT V.22/V.22 bis, Bell 212A Compatible, and 2400/1200/600/300/110 bps.

Our modems are fully compatible with all Hayes software commands. Software packages such as Crosstalk, Smartcom II, and Sidekick will work flawlessly. Both the 2400I and 2400E are equipped with Automatic Adaptive Equalization which automatically adjusts to the telephone line and increases performance and decreases the error rate.

The 2400I Internal Modem Card fits into any expansion slot, as it is a compact half-card modem. It's designed specifically to operate in the IBM Personal Computer PC/XT/AT family and compatible computers. The rear panel has two RJ-11C modular telephone jacks for the telephone line and the telephone set. The modem can be set for COM1 or COM2. The 2400I modem allows asynchronous communications with remote computers and other data terminal equipment over standard voice grade telephone lines. The 2400E External Modem offers the user asynchronous or synchronous communications. The 2400E is en-

No Risk Guarantee

If you are not completely satisfied with your purchase, you may return it within 30 days of purchase for a complete refund, including the cost to send it back. If you can get any dealer or competitor to give you the same **Full Guarantee**, buy both and return the one you don't like.

For fastest delivery, send cashier's check, money order, or order by MasterCard/VISA. Personal Checks allow 18 days in clear. Company purchase orders accepted, call for prior authorization. California residents add 6% sales tax.

closed in a slimline plastic enclosure. The front panel displays the eight modem status indicator lights. It works on any computer or terminal with an RS-232C serial port.

Siblings

Not to be forgotten are our 300/1200 baud modems. The Internal Modem Card is designed for the PC, PC/XT and most compatibles; it occupies one full length slot and the internal speaker lets you know the call progress. An RS-232C serial port is standard, COM1 or COM2; you can use the port for other peripherals when the modem is not being used. Our External stand alone modem can be used with any computer or terminal which utilizes an RS-232C serial port. It also comes with 8 status indicator lamps and a snap off front panel that allows for quick setting of the switches for all types of communication packages. At \$139 and \$149, these are the best price/performance modems for most communications.

What's In A (Sur)Name?

Everything, if it's a Qubie' supported product. We at Qubie' stand behind what we sell. Our 30-Day "No Risk Guarantee", our one year warranty and 48 hour turnaround on warranty repairs are proof that our products are of the highest quality.

We're Writing the Future of Multi-User PCs

PC-PLUS — The Fastest Growing Multi-user PC Solution

1984 Alloy introduces PC-PLUS — a revolutionary multiuser, multiprocessor architecture for PCs. Amidst the confusion of LANs and time-sharing approaches, RTNX and PC-SLAVE/16 provides a unique, high-performance solution. What LANs promised, PC-PLUS delivered. Faster. Easier to install and use. Less Expensive.

1985 ATNX with its lightning-fast disk caching supports AT-class machines. File and record locking — plus controls to manage file access. Disk volumes greater than 32 Mb. DOS 3.X machines can reach the peak of multiuser performance.

1986 NTNIX and PCST/G graphics terminal continue the tradition. NTNIX lets PC-PLUS run multiuser applications written for Novell NetWare and MS-NET. PCST/G brings high-resolution, Hercules-compatible graphics to PC-PLUS workstations.

AND BEYOND We've written the history of multiuser PCs, and we're writing the future . . . with PC-compatible multiuser systems.

The LAN Alternative

PC-PLUS . . . the perfect solution for sharing data among users. The 8MHz SLAVE/16 card operates at over twice the speed of typical PCs. Advanced bank-switched memory delivers data at bus speed. Many times faster than LANs. Engineering ingenuity makes PC-PLUS simpler and much easier to install than LANs or UNIX multiuser systems. While sharing disks, printers and other peripherals with single-user ease of operation.

The Optimum IBM Multi-user Solution . . . Made Possible by Alloy

The PC-PLUS family turns your single IBM personal computer or compatible into a fully integrated office solution. Up to 31 users can be added to the host — while maintaining full functionality of the PC. As needs grow, add more PC-SLAVE/16 cards and low-cost terminals.

The Choice of Vertical Market Resellers

PC-PLUS expands as business grows. In any vertical market. Law. Finance. Medicine.

POS. Real Estate.

And more. That's why PC-PLUS is the fastest-growing multiuser solution among vertical market resellers. Today with a strong commitment to tomorrow.

The PC-PLUS is available from:

The Great Expanse

LANs UNDER NETWORK

STATUS REPORTING Network monitoring and status reporting are important features of any network operating system. The network administrator should be able to see a variety of displays reporting on file system operation, as well as factors like the average time taken to complete various types of requests from each workstation and the frequency of requests from individual workstations. Network managers need this information to make good decisions about allocating resources, adding equipment, and troubleshooting. Unfortunately, status reporting is one area in which the entire LAN industry falls down.

Novell offers a display that runs on the server and monitors file activity on six workstations at a time. This display shows disk actions waiting in queue and the percentage of occupied versus idle time of the server processor. *NetWare's* displays will tell a network administrator if things look "normal," but it won't help him optimize his use of the LAN. Generally, Novell's network analysis tools are as good as most and better than some, but nonetheless they are barely adequate for the proper management of modern systems.

TUTORIAL One of the most laudable features of *Advanced NetWare* is its tutorial system. The tutorial comes on three disks that you must load onto a hard disk. *AutoMentor* tutoring software is a program that facilitates the creation of on-screen instruction sessions using the actual programs being taught. *AutoMentor* runs the program, makes or prompts keystroke entries, and displays annotations over a *NetWare* screen. The result is an effective tutorial describing the menu and operational utilities.

INSTALLATION Installing the software for any network is a two-part operation: first you copy the software onto the server(s) and workstations, then you configure the network for operation.

It takes some time to install *Advanced NetWare* on a server properly, but the process is well documented and will be easy if you have ever formatted and partitioned a hard disk. Novell supplies two utilities to test and format the server's hard disk. One test should run for several hours on a large hard disk to evaluate the electromagnetic

Turn Your Basic PC Or XT Into A Powerhouse With A Qubie' XTKit. Our 1-2 Punch Lets You Create The Ultimate (And Affordable) Enhanced AT.

XT Enhancement Kit

ATE-1 BT42 & AT4X4Plus (512K) \$1099
ATE-2 BT42 & AT4X4Plus (1MB) \$1199
ATE-3 BT42 & AT4X4Plus (2MB) \$1299
42 Megabyte Drive, Runs All The Popular AT Software, 40 Msec Access Time, Voice Coil Drive Heads With Closed Loop Servo Positioning, Full-Height Unit, Heats Automatically Retract

PC Enhancement Kit

XTE-1 PC20 & BT6PPlus (384K) \$999
XTE-2 PC42 & BT6PPlus (384K) \$1199
BT6PPlus With 384K Memory, Serial And Parallel Ports, Clock/Calendar, BTDRIVE And BTSPool Software, 5.25" Controller, 20 Or 42 Megabyte Hard Disk, Cables, 1dtr Software And User's Manual

DIMENSE

Your AT is no toy - it's a serious piece of computing equipment which requires the finest in peripherals to unleash its power and potential. Qubie's ATKits are the solutions in turning an unenhanced IBM AT or compatible into a supercharged system which will run circles around the IBM "Enhanced" Models.

A powerful AT needs a hard disk with the capacity and the speed to supply data fast. Our BT42 hard drive has a formatted capacity of 42 megabytes and 30 msec. access time. Also included is the "Dreamboard" - the ATX4Plus. It has up to 4 megabytes available, no parallel and serial port standard, with 3 mhz serial ports optional.

SCOPE

Savvy buyers have long been aware that they can save money by buying a single-drive PC or XT and add their own

multifunction card and hard disk. Now you can get the power you need at a price you can afford. The BT6PPlus has all the features you expect of a multifunction card; 384K of memory, serial and parallel ports, battery-powered clock/calendar and optional game port (\$20). You also get print spooling and RAM disk software. The Qubie' PC20 hard disk offers the best available combination of performance, ease of installation, and reliability. 1dtr software completes the kit.

DISTANCE

We really go the distance for you at Qubie'. But don't just take our word for it. Our exclusive 30-Day No Risk Guarantee speaks for itself. Our top notch technical support staff is here to answer any questions you might have during installation or operation. With our one year warranty, your satisfaction is assured; but if anything should breakdown, our 48-Hour turnaround on warranty repairs will have you back up in no time.

No Risk Guarantee

If you are not completely satisfied with your purchase, you may return it within 30 days of purchase for a complete refund, including the cost to send it back. If you can get any dealer or competitor to give you the same No Risk Guarantee, buy both and return the one you don't like.

For fastest delivery, send cash or check money order, or order by MasterCard/Visa Personal Checks allow 10 days to clear. Company purchase orders accepted, call for prior authorization. California residents add 6% sales tax.

NEW FROM SYSGEN: THE COMPARISON IOMEGA® DOESN'T WANT YOU TO SEE:

Iomega removable floppy cartridge.

New DuraPak removable hard disk cartridge.

Bernoulli Box®	Sysgen™ DuraPak™
10 Mbytes per cartridge	15 Mbytes per cartridge
\$1795 for first drive* (plus \$280 for bootable controller, for a total of \$2075)	\$1295 for first drive* (includes bootable controller and installation hardware)
Floppy-based technology (average media life expectancy: "hundreds of hours")	Hard disk technology (average media life expectancy: 11,000+ power-on hours)
External, desktop-consuming system	Internal, zero-footprint system
Large, 8½" x 11" cartridges	Pocket-sized 4¼" x 4¼" cartridges
90-day warranty	Full one-year warranty on drive and media

Sysgen's new DuraPak gives you all the transportability, security and unlimited expansion that have made removable media so popular—in a smaller, more convenient, more reliable format. No wonder it's so widely used in government and military applications: It's a better removable mass storage system for the IBM® PC/XT™ PC-AT™ or compatibles. At an absolutely unbeatable price.

Want to compare dual-drive configurations?

DuraPak gives you all the advantages listed above, at prices that make the competition look positively greedy: Sysgen's 30 Mbyte dual-drive DuraPak system costs you \$2095, including bootable controller. Iomega's 20 Mbyte dual-drive

Bernoulli system costs you \$2695, plus \$280 for their controller. And at \$3775 for their 40 Mbyte dual-drive system with controller, it's easy to understand why they don't want you to see this comparison!

Like what you see? Find out more: Call our toll-free hotline for your copy of the Sysgen product family brochure, or for the DuraPak dealer nearest you.

INCORPORATED

LANs UNDER NETWORK

media on the surfaces of the disk's platters. If you skip this test, you can have the initial installation job done in an hour. But if you have the time, it's a good idea to test the entire disk.

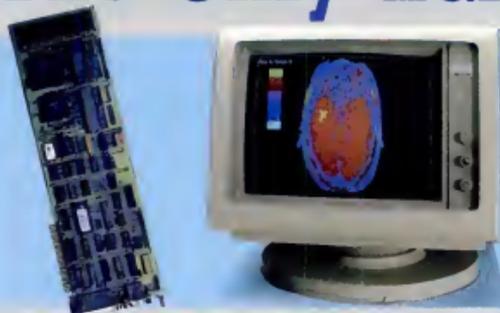

A critical step in the *NerWare* installation process is the creation of the workstation and server *NerWare* BIOS using the menu-driven GENOS (generate operating system) program. The process takes about 12 minutes on a standard PC. For a good part of that time, the PC sits, seemingly idle, while it creates the operating system and drivers used later in the installation. At the end of the GENOS step, you have the files for each workstation and the modified drivers for each server.

The tasks of setting up the server's file structure, establishing security and permission structures, setting DOS paths (called *maps* in *NerWare*), and creating DOS batch files are the biggest jobs facing the network administrator. All networks take work to set up and maintain. *Advanced NerWare* furnishes the system administrator with a detailed multilevel menu to help establish the file structure and security. But the system administrator must have a detailed knowledge of DOS and be able to write the batch files that automatically log people into the system and route them to their active applications and data files.

EASY TO USE Several features of *Advanced NerWare* make it particularly easy to use. The latest version of the networking software includes four detailed menus, as well as a utility allowing the network administrator or workstation operator to create personalized menus. The Syscom menu helps the network administrator establish and maintain the security system, control the file structure, and set the ways that applications interact between program and data files. The Session menu allows workstation users to select files and specify how their own files will interact. The Filer menu helps workstation users create, delete, and modify personal files, and allows certain users access to personal files. The Queue menu shows the status of the printing queue and allows workstation users to select one of the three printers that can be on each server.

Another nice feature is that once the sta-

The Only EGA

A fully compatible 256k EGA card with a parallel port for only \$259. If you buy any display card: Color, Monochrome, Hercules, or EGA, without reading this ad, you're probably throwing away a lot of money.

BT/EGA Enhanced Graphics Adapter: 256k of memory, and parallel printer port. Works with all standard IBM displays, and compatible displays.
5150 Monochrome Display: Both text and 640x350 bit mapped graphics.

5153 Color Display: 640x200 and 320x200
5154 Enhanced Display: Color 640x350 16 simultaneous colors from a palette of 64

A Clear Upgrade Path

This really is the only display board you may ever need. Regardless of what monitor you buy today, this card is a clear upgrade path for the future, and the best choice today, even if you are only going to use a Monochrome Display. This means one board today does monochrome 640x350 bit mapped graphics end text, and provides a clear upgrade path to 640x350 Enhanced Color Display with no change of display board. It also runs with the 640x200, 320x200 Color Display.

Killer Features

All boards come with a full 256k of memory, and a parallel printer port. That means no extras for later, and 16 simultaneous colors displayed from a palette of 64 colors, and crisp clear text on both Mono-

chrome and Enhanced Color Displays - features or options that are not available on other EGA boards. Since all your current software will run, you're set for today, and prepared for the standard of the future.

The Display Deal

Of course many of you will want to take advantage of the EGA card right away, so we are offering a special deal when you buy the board together with a Basic Time HR 31-350 monitor - you get both for just \$749, or the card only for \$259. This means that you can equip all your PC's now and in the future with Displays and EGA cards and get the Qubie "No Risk Guarantee", our one year warranty, and 48 hour turnaround on warranty repairs. The price is the whole price, there are no extras for freight, insurance, or credit cards.

No Risk Guarantee

If you are not completely satisfied with your purchase, you may return it within 30 days of purchase for a complete refund including the cost to send it back. If you can get any dealer or competitor to give you the same **No Risk Guarantee**, buy both and return the one you don't like.

For faster delivery, send cash or check money order, or order by MasterCard/Visa Personal Checks allow 18 days to clear. Company purchase orders accepted, call for prior authorization. California residents add 6% sales tax.

LANs UNDER NETWORK

tion is connected to the network, *Advanced NetWare* lets you remove the network boot disk from PCs that have only floppy disk drives. Also, *NetWare* does not permanently use workstation RAM. Consequently, once a workstation is connected to the server, *NetWare* becomes invisible and does not impose any overhead on it. Network programs from some other vendors load portions of the workstation program into RAM and keep it there, limiting the size of an application you can run.

Using batch files, the system administrator can make the Novell network act as merely an additional disk drive for the person using the PC. As the benchmark tests show, the *NetWare* software is as fast or faster than any competing products.

GOOD DOCUMENTATION AND SUPPORT

Advanced NetWare comes with a great deal of well-organized and exceptionally good documentation, which includes manuals for half a dozen of the most common hardware systems, as well as separate manuals for workstation operators, installers, and system administrators. Each volume contains its own glossary, table of contents, and index. The installation guides are illustrated with drawings and charts. Beyond this level of support, eight *NetWare* support centers across the country provide good on-call training and technical help.

WORKS WITH MULTIVENDOR HARDWARE

Once you install the operating system, *Advanced NetWare* allows you to specify up to four different hardware cards for the same server. Thus your server can host a network made up, for instance, of a string of workstations attached to 3Com cards, a string of workstations attached to ARCnet cards, and a string of workstations attached to StarLAN cards. The server could have one card for each, and the differences in hardware would be invisible to the people at the workstations. All users could access the same files and interact through electronic mail. This would be useful when, because of less-than-perfect planning, your company might have networking cards from different vendors.

Novell also sells software that allows a workstation to bridge between two net-

works, as well as systems that connect workstations to mainframes through IBM's System Network Architecture.

SYSTEM FAULT TOLERANT Since failures can occur in many places, Novell's recently released *SFT NetWare* adds a number of features that allow the entire system to continue functioning should one part fail. *SFT NetWare* has redundant directories and special verification procedures when files and the file allocation table are written. It can automatically detect and lock out bad disk sectors without losing data, and it features error detection and correction during transmission through the network.

At the highest level of protection, Novell's *SFT NetWare* can run hard disk drives or even complete servers in the "shadow" mode. This mode performs all actions on both drives or both servers. If one drive or server falters, an automatic reconstruction process takes data from the other unit without halting the network.

Novell has earned its success in the LAN industry. *Advanced NetWare* is the operating system of choice for many manufacturers because it contains many proven features that other networking software companies are still struggling to develop. The power of the IBM name may carry the IBM networking software to strong levels of sales, but *NetWare* will continue to have appeal for its multivendor capability and other well-integrated qualities.

AT&T Information Systems StarLAN

In the PC marketplace, emulation is the sincerest form of flattery, and AT&T's StarLAN is a much-emulated system. Several companies, notably chipmaker Western Digital Corp., have announced network adapter cards and integrated circuit components compatible with StarLAN. In addition, StarLAN's signaling system has recently been adopted as standard.

This is not a review of StarLAN as AT&T markets it. Because of a shipping problem, we received the StarLAN cards and wiring without AT&T's networking software. Since StarLAN runs under

Novell's *Advanced NetWare*, we tested StarLAN using the same software and server as we did for the other LANs reviewed in this issue. And, in fact, Novell recently began selling StarLAN in just this configuration. The graphs in this issue show StarLAN's performance running under *Advanced NetWare/286*, with an 8-MHz IBM PC AT as the server.

In the next issue of *PC Magazine*, we will give you the test results using AT&T's networking software.

As it turns out, StarLAN runs beautifully under *NetWare*. In 15 minutes, we generated Novell server and workstation software for StarLAN using *NetWare's* GENOS (generate operating system) program. The StarLAN/*NetWare* combination handled network interruption and restoration very well. We used one network station to do a directory listing of the server and then unplugged it from the network. Simply reconnecting the cable restarted the listing right where it stopped. No keystrokes or reboots were needed to restart the workstation's activity.

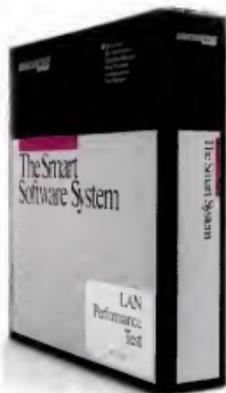

The StarLAN/*NetWare* combination ran on all of our network's stations, including the 8-MHz AT and several PC-clone systems, without reconfiguration.

INSTALLATION Installing StarLAN was surprisingly easy. StarLAN's network interface card is a full-length circuit board with modular connectors—slightly larger than telephone jacks—on the back for plug-in connections to the network wiring. The cards have two jumpers, no switches, and came out of the box ready to install into any long slot on a PC or AT. (They have a little cutout to clear the extra socket in the AT's bus.)

You can physically configure StarLAN as either a bus or a star. But no matter what physical configuration you use, StarLAN always operates electrically as a bus. Not surprisingly, our benchmark tests showed little difference between the bus and star configurations.

All of the workstations access the electrical bus using a CSMA/CD protocol identical to the Ethernet standard protocol. The StarLAN protocol has recently been adopted by the same international standards committee that specified the Ethernet protocol (IEEE 802.3). The pri-

FOR \$49.95, YOU CAN PUT YOUR LAN TO THE TEST.

The new Smart LAN Performance Test is the only software that simulates and measures realistic office use of a Local Area Network.

If you're thinking of buying a network, the Test lets you compare the speed and cost-efficiency of different LANs.

If you already own a network, it lets you judge the effects of adding more workstations, servers, buffers, or memory.

However you use it, the Test gives you the accurate,

objective information you need—reported in either worksheet or graphic form.

The Smart LAN Performance Test may be used to evaluate networks

running under DOS 3.1, including LANs from 3Com, IBM, Novell, AST, and AT&T. The cost is just \$49.95 (VISA, MasterCard & American Express accepted).

So call our toll-free number, and order your Smart LAN Performance Test today.

There's no better way to put your LAN to the test.

LANs UNDER NETWORK

The StarLAN system consists of (1) a full-length network adapter card for each server and workstation on the network and (2) an optional ten-port wiring hub. An 80286 machine acted as the server tested under (3) Advanced Network/286. Workstations can be up to 800 feet from a hub. You need a second hub to extend the network beyond that distance or to connect more than ten workstations to the network. Wiring hubs can be up to 10 feet apart. The connecting cable is (4) twisted-pair wiring using modular phone plugs and jacks.

Electrically, StarLAN is a CSMA bus-type system, in which the stations share the wiring by listening before they transmit. Physically, you can connect the workstations together in either a bus, hooked one to the other on either side, or a star, in which all stations are connected to a central hub.

major difference between the two protocols is that Ethernet runs at 10 megabits per second on coaxial cable while StarLAN runs at 1 to 2 megabits per second on twisted-pair wiring.

In the physical bus-wiring configuration, workstations are linked one to the other in a chain. Since you don't have to run wires from each workstation to a central point, as in a star setup, the bus-wiring configuration saves wiring. Up to ten stations can operate in a bus-wiring connected by a maximum of 400 feet of cable. The StarLAN adapter cards have jacks marked "in" and "out." So to configure the bus configuration, you connect the ins to the outs. (For a star, you run the wire from the out jack to a wiring hub.) StarLAN does not require terminating resistors at the ends of the physical bus, as with coaxial bus systems, nor does it require expensive coaxial T-connectors.

The downside to the bus-wiring configuration is that it makes troubleshooting difficult. To locate and fix a problem, you wind up disassembling large portions of the network.

In the star configuration, an active (powered) hub called the Network Extension Unit regenerates packets and allows you to expand and extend the network. You can connect up to ten workstations to one extension unit, then connect extension units to add more stations or extend the distance between stations. You can connect a workstation to a Network Extension Unit with as much as 800 feet of cable.

Make Flashy Programs.

In dBASE, Turbo Pascal, BASIC, C, COBOL, Fortran, 1-2-3, DOS.

New! Flash-Up™ Windows.

Instantly flash-up menus and help windows.

From within almost any program language or application program. When the user makes a menu selection, a sequence of keystrokes is sent to the running program as if the user were typing it at the keyboard.

A keyboard macro utility that your programs can control!

Just like keyboard macro utilities, Flash-Up Windows can be used to send repetitive keystrokes and simplify commands for your users.

But Flash-Up Windows can do more. Your programs can send commands directly to Flash-Up. Powerful commands that control when and how windows appear. Flash-Up is a perfect tool for controlling programs and entire systems via menus.

The powerful window editor allows you to create windows, change their size, location, and color — all automatically.

Works with DOS, BASIC, Turbo Pascal, C, COBOL, Fortran, dBASE, 1-2-3, R-BASE ... and most other software. \$90.

Flash Code™ For dBASE II, III and III+.

The most powerful, most complete program developer for dBASE II, III, and III+.

Use Flash Code's advanced screen design editor and see how incredibly easy screen design can be. Draw boxes, lines, and select colors. Specify special parameters for edit checking, initial values, calculated fields, etc. All within one, easy to use editor.

Then tell Flash Code to write the program. Based on your screen designs, Flash Code can generate a full database program. Well written code that you can use as is, or merge with your own programs.

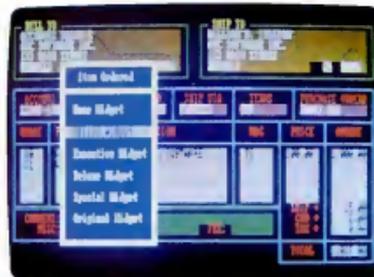

Menus and help windows add a new dimension to your dBASE applications.

Flash Code includes its own dBASE window editor. Use the window module to flash-up windows and screens instantly. The windows are easily converted when you move to the added power of our Flash-Up Windows product.

"... a truly remarkable product. Brand new, state-of-the-art and actually fun to use. The windows make it an even more amazing product."

— Gary N. Pragus, Author, "The dBase III Programming Handbook"

Flash Code. \$150.

Screen Sculptor™ For IBM BASIC, Turbo Pascal, and Quick Basic.

Create screens in minutes, then Screen Sculptor writes the program.

In IBM BASIC, Turbo and Microsoft Pascal, and Quick Basic. Simply "draw" your screens with our advanced screen design editor and replace hours of tedious work with minutes of creative design.

Move pieces of the screen around, select colors from a menu, draw boxes, lines, point, repeat last character. And more! Specify variable names, data types, acceptable data ranges, pictures for edit checking, etc., and you're ready to go.

Generate tested program source code to merge with your own program.

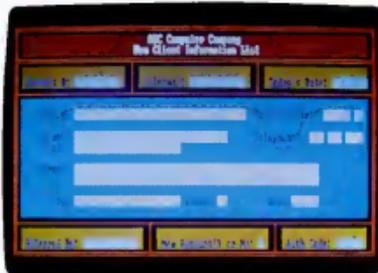

Based on your screen design. The generated program flashes up the screen, allows data to be entered by the user, and edit checks the input data.

"... so well done that you may not need to refer to the manual."

"... an exceptional product that fills a real need in the development of new programs."

— Computer Language

Screen Sculptor. \$125.

LANs UNDER NETWORK

If you use a bus connection scheme for StarLAN, the cables run from the out port of one card to the in port of the next. If you use the wiring hub, you connect the cable only to the out port. The telephone port on the interface card lets you connect a telephone to the StarLAN wiring, which contains two pairs of wires, one for voice and the other for data signals. Thus, you can reduce the jungle of wires running from your desk to the wall.

Although it does not diagnose problems, the Network Extension Unit has features that aid in troubleshooting. When you unplug a workstation from the unit, the jacks automatically close its electrical circuit. If the wiring going to one station is shorted or a station card malfunctions, you can disconnect the station at the hub. To diagnose a problem, you must disconnect each station in turn; when you reach the offending station, the network is immediately restored. Two status lights on the Network Extension Unit blink when the system is working again.

TWISTED-PAIR WIRING Most twisted-pair networks use the type of twisted-pair wiring that connects telephones to the wall. But StarLAN's DW8A wiring looks more like coaxial cable. If you are starting from scratch, this cable will probably cost you as much to install as RG-62 or RG-58 coaxial cable. However, the cabling has spare capacity that can be used to carry voice calls to private-branch-exchange (PBX) or key-system telephone switches. StarLAN's network interface card has a jack labeled "phone" that you can use to connect a telephone to a PBX through the StarLAN wiring. In effect, you need only one four-pair cable (about the same size as a single coaxial cable) running to your desk for both voice and data services. Voice and StarLAN data signals don't share wires, but the wires can be located in the same cable until it reaches the wiring

closet, where the voice and data wires will go their separate ways.

Another advantage of AT&T's network wiring system is that it can also use the multiconductor telephone cables that are already installed in offices to carry data signals. You'll need to have a telephone installer survey your wiring system to determine whether your telephone wires can accommodate StarLAN's cabling requirements, but many installations can use existing telephone wiring.

A NICE SURPRISE Most articles on network cabling advise you to avoid twisted-pair wiring in "noisy" electrical environments. To avoid problems, installations with sparking motors, radio broadcasts, and other sources of electrical interference are advised to use coaxial or fiber-optic cables. Since modern office buildings host a myriad of electrical devices, from air conditioners to floor buffers, we tested StarLAN's susceptibility to interference. Our tests were not exhaustive, but they probably represented the en-

vironment found in most small businesses.

We wrapped the StarLAN cable around a small appliance motor that was visibly sparking and looped it around a dehumidifier with both fan and compressor motors running. We also began transmissions over a 3-watt amateur radio operating at 146.52 MHz. We then ran our standard benchmark tests. We detected no difference in performance between tests run in the normal and in the noisy environments.

COSTS AND SERVICES StarLAN network adapter cards retail for \$595. Other companies have announced compatible cards at prices under \$300. The AT&T Network Extension Unit retails for \$575. AT&T's networking software sells for \$125. The complete Novell *Advanced NetWare/286* we used in this evaluation retails for \$1,595.

StarLAN is sold through AT&T Information Systems, which has installation, support, and training services available throughout the country.

The StarLAN package offers many flexible installation and expansion options. It will slow down under the heaviest data loads encountered in interactive processing, but its flexibility and moderate costs make it attractive for office automation and light database work.

Gateway Communications Inc. G/NET

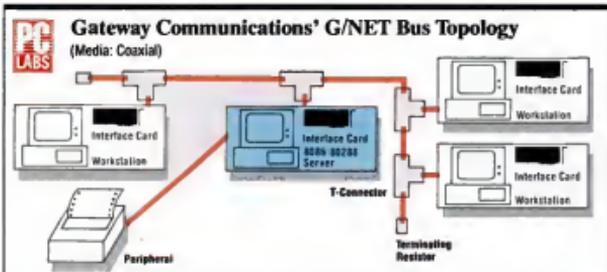

What's dependable, helpful, and reliable? A Boy Scout? No—Gateway Communications' G/NET.

Gateway combines Novell's *NetWare* with its own networking cards and coaxial cable into a bus network. But Gateway distinguishes itself from other network vendors that use *NetWare* by adding utility programs and beefing up the documentation.

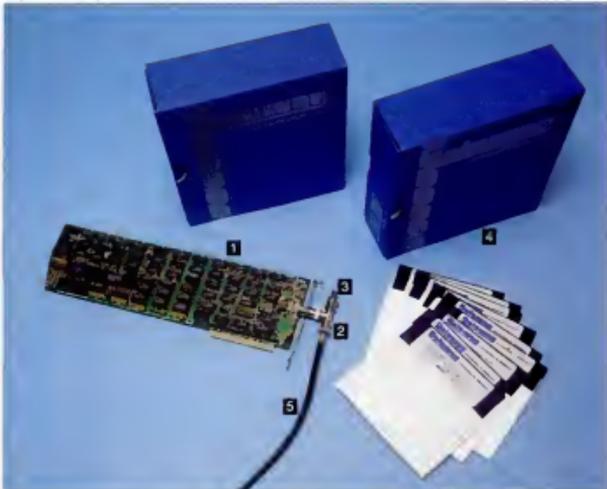

Unfortunately, when PC Labs tested G/NET, it came with *NetWare*, Version 1.04, which lacks some of the menus and other features found in later versions of the software. For that reason, Gateway received slightly lower ratings in some areas of the software evaluation than networks that ran *Advanced NetWare*. The manufac-

	FACT FILE
StarLAN AT&T Information Systems 1776 On-the-Green Morristown, NJ 07960 (800) 247-1212	
Workstation Requirements: 256K RAM, one floppy disk drive, DOS 3.1.	
Network Software: AT&T StarLAN Network Program; <i>Advanced NetWare/86</i> ; <i>Advanced NetWare/286</i> .	
Media: Twisted pair.	
Prices: 6300 Network Access Unit interface board, \$595; Network Extension Unit (passive hub), \$575; 300 feet of cabling, \$23; 1,000 feet of cabling, \$55; Active Link (fiber optic board), \$375; Active Link GPT (two-port active hub for PC 200), \$1,295; four-port passive hub (for use with PC300), \$100; eight-port active hub, \$885.	
In Short: StarLAN is easy to install and expand; the interface cards come out of the box ready to insert and the Network Extension Unit makes it easy to hook up additional workstations. The unit also includes useful status lights that aid in troubleshooting. Although StarLAN uses twisted-pair wiring, the system was unaffected by RF noise.	
<small>CIRCLE 108 ON READER SERVICE CARD</small>	

LANs UNDER NETWORK

Gateway Communications' G/Net system consists of (1) a network interface card for each network station, (2) T-connectors, and (3) terminating resistors. An 80286 machine acts as the server running under (4) NetWare, Version 1.04. You can use different types of (5) coaxial cable; basically, the larger the diameter, the farther you can run the cable and the less the signal will degrade. The system uses the CSMA media-sharing protocol on a bus-wiring configuration.

turer assured us that it will supply *Advanced NetWare* by the time this article is published. (Gateway has also announced a version of *NETBIOS* that will allow the G/NET cards to use the IBM PC *Network Program* software.)

NOVELL UPGRADES Unlike most vendors, Gateway requires that you set the base memory address of the network interface card. You have to know the amount of

RAM installed in each workstation and change the networking card when you change the RAM size. However, Gateway's custom-installation program simplifies the configuration process by using graphics to show you how to set the switches on the interface card. The program operates in either monochrome or color modes.

All networking software contains lines of code called drivers that exchange data

between the network interface card and the computer's microprocessor. Most versions of *NetWare* contain a generic set of drivers meant for all brands of boards. But such generic drivers don't necessarily elicit the most efficient operation from a particular interface board. Gateway therefore substituted its own drivers into *NetWare* to maximize the efficiency of G/NET hardware.

DATA TRANSMISSION Data networks of all types, from the international Teletel system to PCs on a LAN, transmit data in packets. Each packet contains addressing, error checking, and other special bit patterns besides the actual data. Most systems also add filler bits to create a fixed-length packet. This method of transmission theoretically ensures each workstation fair access to the network and makes moving packets easier.

Alternatively, a system can use variable-length packets that add only addressing and other necessary bits to outgoing messages. In theory, sending small packets lowers the network's bit-per-second transmission rate, decreases overhead, and improves efficiency. Variable-length packets are believed to work particularly well on PC LANs in which many short

PC FACT FILE

G/NET

Gateway Communications Inc.
2941 Alton Ave.
Irvine, CA 92714
(714) 553-1555

Workstation Requirements: 128K RAM, DOS 3.1.

Network Software: *NetWare 1.04*; *NetWare 4.61B*; *Advanced NetWare/86*; *Advanced NetWare/286*; IBM PC software (requires *NETBIOS*, a *NETBIOS* simulator).
Prices: Two-node starter kit, \$1,895; three-node starter kit, \$2,420; additional network interface cards, \$525; cabling, \$1 per foot.
In Short: G/NET is a good general-purpose network. It distinguishes itself from other LANs running Novell's *NetWare* by adding drivers to optimize performance and a program that steps you through the installation procedures. On the downside, under a heavy (but realistic) workload, G/NET was the slowest network tested.

PRINCETON LS-300— LET YOUR PC SCAN NEW HORIZONS

Scan text, images and graphics
into your IBM PC or compatible
as fast as 12 seconds per page at
full 300 dpi resolution.

The compact Princeton LS-300 Scanner is versatile, easy to use and appropriate for desktop use. You can also team the LS-300 Scanner with the new Princeton LM-300 Print Preview Monitor and save time by viewing a full page before you print.

A Wide Range of Applications The LS-300 helps you increase productivity in a variety of applications. With hardware dithering for gray levels, you can combine photographs and illustrations with reports or proposals. You can produce desktop publishing materials with extra visual impact. And, because the LS-300 reads virtually any page, you can scan in documents that can be sent at full 300 dpi resolution for facsimile transmission, or stored for future use.

To convert typewritten pages into editable text, an OCR option is available.

A High Resolution Image Scanning at 300 dpi, the LS-300 gives you the same resolution as the output of a quality desktop laser printer. It also maintains compatibility with your EGA software and display.

IBM Compatibility, Princeton Reliability

The Princeton LS-300 is designed for use with your IBM PC/XT/AT or compatible... its attractive price includes adapter card, cable and software. What's more, you can depend on the LS-300 to keep on working because it features built-in Princeton quality and durability.

See Your Dealer for a Demonstration

If you're ready for a versatile desktop scanner that can help you increase your productivity, see your Princeton Dealer today for a demonstration. Or call for more information.

CIRCLE 221 ON READER SERVICE CARD

LANs UNDER NETWORK

Gateway Communications' installation program simplifies the process of configuring the network interface card by using easy-to-follow diagrams (see screen shot above) to show you how to set the card's switches.

messages in the traffic flow are common.

Gateway's revision of *NetWare* allows the system to transfer data in packets varying in length from 1 to 2,550 bytes. But despite its use of variable-length packets, G/NET showed mixed results on the PC Labs speed benchmark tests. In tests measuring the performance of the networking cards and media, G/NET fell in the middle of the pack. Under heavy but realistic workloads, in which we attempted to load both the network and server disk system using *The Smart Software System*, G/NET was the slowest network tested in this issue. This is probably because of the product's use of the older version of *NetWare*.

G/NET PIECES G/NET uses the CSMA/CD media-sharing scheme but adds additional error-detection and retransmission protocols. G/NET uses baseband signaling on coaxial cable (the advantage that broadband signaling offers over baseband is the ability to transmit video and data signals simultaneously).

G/NET can use either RG-59/U coaxial cable (75 ohms; used for television), RG-62/U coaxial cable (93 ohms; used for

IBM 3270 terminals), or larger-diameter cables such as RG-11, but you can't mix the cable types in a network. A network can use up to 4,000 feet of cable from end to end.

The G/NET network interface boards, each of which has its own Z-80B microprocessor with 64K bytes of RAM, fit into either a PC or an AT expansion slot. The network cable bus connects to the card through a T-connector, so in effect two coaxial leads have to run to every PC except the first and last on the bus. At the end units, you have to install small terminating resistors on the T-connector—a simple but essential job.

G/NET comes with excellent documentation made up of Novell manuals supplemented by Gateway's instructions and hints. Gateway also includes a 2-inch-thick stack of single-spaced technical notes with hints on cable installation, descriptions of new software versions, technical discussions, and other information. Moreover, when we made an unannounced call to Gateway with some technical questions, we got a return call and clear answers. Gateway claims sales of about 15,000 net-

works containing a total of about 50,000 workstations, and the company has apparently established a good support structure for these customers.

COSTS Gateway markets G/NET in two- and three-node starter kits with 25-foot cables and all the software and hardware you need to get started. The two-node kits sell for \$1,895, and three-node kits sell for \$2,420. Cards for additional workstations are \$525. No additional software is necessary to add workstations.

Besides its LAN products, Gateway, as its name implies, offers many products that provide gateway interfaces to other communications systems. You can buy hardware and software packages from Gateway for SNA communications that use 3270 or 3770/RJE emulation, X.25 network communications, and asynchronous modem communications. You could, for example, use these products to link your LAN with a mainframe system.

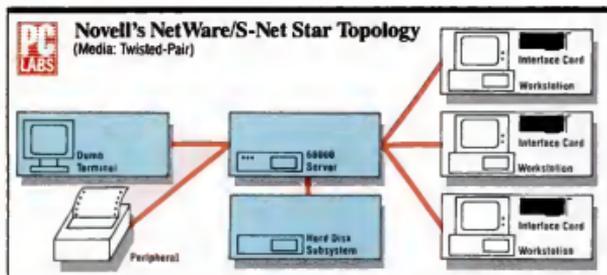

G/NET is a good, general-purpose network that is relatively easy to install and maintain. But before you invest in the system, make sure that you find out about the availability of Gateway's version of *Advanced NetWare*.

Novell Inc. NetWare/S-Net

Novell's approach to the LAN marketplace is confusing. On the one hand, the company claims to be primarily a networking software company. Novell networking software is available for several dozen networking systems, including all of the networks reviewed in this issue. On the other hand, Novell also resells networking systems from other vendors, including Proteon, Gateway Communications, and AT&T Information Systems. And to make matters even more complicated, Novell also markets its own network, called NetWare/S-Net. We reviewed NetWare/S-Net here because it is the only system made up completely of Novell products.

SETTING UP Novell markets two dedicated servers with NetWare/S-Net, the 286A and the 68B. We tested NetWare/S-

LANs UNDER NETWORK

Novell's NetWare/S-Net system consists of (1) a special 68000 server with (2) a hard disk subsystem and (3) a network interface card for each workstation. The system uses (4) small-diameter twisted-pair wiring. We tested the system running under (5) Advanced NetWare 68. A separate dumb terminal is required to monitor the server and attaches to it with an RS-232C cable. Each station has a direct unshared communications link to the server that is polled regularly. You can connect up to 14 more stations to the server through an ARCnet system.

Net with the 68B server. Server 286A is a brand-new system that combines an 80286 processor running at 8 MHz with a 30-megabyte hard disk and an optional tape backup. PC Labs did not test this system, but it is reasonable to expect its performance to be similar to that of the 8-MHz IBM PC AT used as a server for benchmark tests on other networks reviewed in this issue.

The Server 68B, which comes with a hard disk drive subsystem, is an updated version of the server that Novell has marketed for several years. The 68B is a rugged, conservatively designed machine. It is bigger than a PC AT and uses a Motorola 68000 processor. Inside, you'll find pow-

er-supply wiring that can deliver many amps of current. Transformers are mounted on the chassis rather than the circuit boards so that they won't rip off or bounce around. Large toggle switches snap solidly, and the high-volume, low-speed fans are made to last. We liked the 68B hardware.

Occasionally you might need to access a key switch on the server's front panel to reset the system, but otherwise you can hide the server and hard disk drive subsystem in a closet and forget them.

INSTALLATION AND USE NetWare/S-Net is fairly easy to install. The adapter cards came out of the box ready to insert

into a PC, although you can set optional features with jumpers. To install the software for the workstations, you simply copy two programs from distribution disks onto working disks. Nor is much effort required to install *Advanced NetWare 68* on the 68B server. After you connect the workstations to the server, you type a command from one of the workstations to copy the system disks onto the server. The process takes 10 minutes.

We ran into one hitch when we tried to set up the system. The manual neglects to mention that you are required to provide a terminal that controls and monitors the activities of the server and connects to it through an RS-232C cable. This requirement can add several hundred dollars to the cost of the system. We used a PC running *Crosstalk* in this role, but, since the cable that Novell supplied us had connectors and wire arrangements that didn't work on the PC's serial port, we had to fabricate our own RS-232C cable.

NetWare/S-Net uses a star topology. A star arrangement takes more wire than a bus configuration but avoids the problems of media sharing. While hooking up many stations might cause contention for use of the hard disk and network processor, one

FACT FILE

NetWare/S-Net

Novell Inc.
1170 N. Industrial Park Dr.
Orem, UT 84057
(801) 226-8202

Workstation Requirements: 256K RAM, DOS 3.1.

Network Software: *Advanced NetWare 68*.
Prices: Server 68B, \$8,000; network interface boards, \$250; disk subsystems: NDS2, \$4,795; NDS4, \$7,095.

In Short: NetWare/S-Net with server 68B is a good, solid network for heavy-duty transaction processing. The server is a rugged, conservatively designed machine. NetWare/S-Net is also quite a remarkably steady performer, showing little degradation from the lightest to the heaviest test loads. In addition, NetWare/S-Net is easy to install, with the exception that the documentation neglects to mention that you must attach a terminal to the server.

CIRCLE 166 ON READER SERVICE CARD

LANs UNDER NETWORK

bad adapter card or shorted cable cannot take the network down.

The connection between workstations and the server is made with small-diameter twisted-pair wiring using the RS-422 signaling scheme (which supersedes the RS-232C standard) running at 500K bits per second. Thus each workstation, in effect, has its own communications port on the server and polls this port on a regular basis.

You can hook up to 24 stations directly to the 68B server with up to 1,000 meters (or about 3,280 feet) of wire. For the 25th workstation, you must add another server. Alternatively, you can install Standard Microsystems Corp.'s ARCnet expansion card into the server, which allows it to accommodate 14 additional workstations. You also need a wiring hub and ARCnet network interface cards for the stations, which are strung together on a coaxial cable. Thirty-eight network stations would be a big load for any of the network configurations we tested. But the ARCnet connection is a nice way to add infrequent users to the system—say, for modem sharing—without tying up the dedicated communications ports.

BENCHMARK-TEST RESULTS Since the special *NetWare 68* software designed for the 68000 microprocessor contains all the menus and user features of *Advanced NetWare*, the functional ratings for this system are the same as those for systems using *Advanced NetWare*.

Although *NetWare/S-Net* on the 68B server was neither remarkably fast nor slow, it was remarkably consistent under a load. The benchmark-test performance time of the network cards and transmission media increased by about 60 percent from the lightest to the heaviest test loads. While some of the other systems started out faster than Novell's, their benchmark-test times increased by about 250 percent over the same increase in network load.

Similarly, in tests of practical and heavy workloads, *NetWare/S-Net* on the 68B server started out slower than some others but experienced little degradation no matter how hard it worked. If, as Novell claims, the slope of the degradation curve for throughput on the 68B server stays constant, this server can do some heavy transaction processing.

COSTS Novell markets *NetWare/S-Net* in several different ways. The 68B server alone has a list price of \$8,000. A package with the network software, server, hard disk subsystem, plus four network interface cards and cables sells for \$12,295. You can put together a less-expensive system using an AT and a bus network such as 3Com's or Gateway Communications' G/NET, but it would degrade more under heavy processing loads and lack the "industrial grade" engineering of *NetWare/S-Net* with the 68B.

If you have an application that requires heavy transaction processing, such as an on-line accounting or inventory system, you should seriously consider *NetWare/S-Net* with the 68B.

Proteon Inc. ProNET-10

Proteon markets a wide range of networking alternatives, including network adapter cards for Convergent Technology's Unibus, Digital Equipment Corp.'s Multibus, and the IBM PC standard bus computers. These adapter cards can use twisted-pair, coaxial, or fiber-optic wiring as well as networking software from companies such as DEC (*DECnet*), Novell (*NetWare*), and AT&T (*UNIX*). All in all, this is quite a multidimensional LAN product line. Proteon claims to have more than 700 installed LAN systems with over 11,000 nodes.

For IBM PC systems, Proteon markets a token-ring network called the ProNET-10. This network integrates a network interface card using the token-passing protocol, Novell's *Advanced NetWare/86* or *Advanced NetWare/286*, IBM's standard shielded twisted-pair cable, and a network hub. (Proteon has also announced a product called ProNET-4, which was not available for evaluation at the time of this review and which the company claims is completely compatible with IBM's token-ring network.)

HARDWARE AND SOFTWARE Proteon supplies an unmodified version of Novell's *Advanced NetWare/86* or *286* with the ProNET-10. You have to run the *NetWare* installation program yourself to

generate a version of the software for the ProNET-10 boards. This takes about 15 minutes.

The ProNET-10 adapter card is a half-size card loaded with VLSI devices. The card's best feature is its simple installation in the PC: you just remove most of the slide-on jumpers (taking jumpers off is always easier than trying to get a large number of them on correctly). You do have to set a DIP switch on each board with a unique station address, but this is a simple job. You should, however, take care when assigning and recording the address for each card. This will save you the trouble of resetting a lot of switches should you decide to expand the network or link two networks in the future.

Each ProNET-10 network adapter card has a 15-pin connector that mates with IBM Type 6 shielded cable, which in turn connects to the network wiring hub. Type 6 cable consists of two twisted-pair wires inside a shielded mesh. This cable is fairly stiff and the plug and jack just push together, so be sure to carefully seat and screw down the connectors securely. Since Type 6 cable is just as expensive and difficult to install as RG-62 coaxial cable, the only advantage we could see to using it is that it fits nicely into the IBM wiring plan that is being installed by some major corporations. In most installations, the IBM Type 6 cable runs between the workstation and

FACT FILE

ProNET-10

Proteon Inc.
4 Tech Circle
Natick, MA 01760
(617) 655-3340

Workstation Requirements: DOS 3.1.
Network Software: *Advanced NetWare 86*; *Advanced NetWare 286*; *DECnet*; *UNIX*.
Prices: Proteon network interface card, \$799; eight-node wire center, \$630; four-node wire center, \$335.

In Short: The ProNET-10's adapter cards are easy to install. Small networks can be set up without problems, but networking more than 12 workstations is unduly complicated. Another plus: LEDs next to the connectors glow when an electrical connection is made, which helps in network troubleshooting.

CIRCLE 604 ON READER SERVICE CARD

PROBLEM: There's just no easy way to move from one software program to another.

THE SOFTLOGIC SOLUTION: Software Carousel

Now you can keep up to 10 programs loaded and ready to run.

Hard to believe, but some people are happy with just one kind of PC software. Well, this is not a product for them.

But if you're someone who depends on many packages, all the time—some who'd use several programs at once if you could, well now you can. With Software Carousel.

Why call it "Software Carousel"?

In some ways, Software Carousel works like the slide projector you're used to. You load a handful of pictures, view one at a time, then quickly switch to another. A simple idea, with powerful possibilities for computing.

Here's how it works. When you start Software Carousel, just tell it how much memory you have, load your software and go to work.

Need to crunch numbers? Switch to your spreadsheet. Need your word processor? Don't bother saving your spreadsheet file. Just whip over to your document and do your work. Snap back to your spreadsheet, and it's just like you left it.

With up to ten different programs at your fingertips, you'll have instant access to your database, communications, spelling checker, spreadsheet, word processor, RAM resident utilities, languages, anything you like.

Reach deep into expanded memory.

This could be the best reason ever for owning an expanded memory card, like the Intel Above Board, AST RAMpage, or any

card compatible with the L1/M Extended Memory Standard.

Software Carousel puts programs into this "high-end" memory for temporary storage when they're not in use. And switches them back out when you want them. It's fast, efficient, and easy.

If you want, Software Carousel will even use your hard drive for swapping. Just allocate a portion for storage, and go to work.

Sidekick, Superkey and Ready. All at the same time.

You know what happens if you try loading two or more RAM resi-

dent utilities at once. You get crashed keyboards, frozen screens, all kinds of interference between programs fighting for control.

With Software Carousel, you can have as many accessories and utilities on-tap as you want. Just load different ones in different Carousel partitions. Since they can't see each other, they can't fight.

The easy way to maximize PC power.

With all this power, you might think Software Carousel is complicated and difficult to use. Not so. Set it up once, and it will remember forever. Better still,

Carousel will look for the programs you use most often, and optimize them for the quickest access.

Special holiday offer—free* SoftLogic software.

As a special holiday bonus, you can get another SoftLogic Solutions product free when you buy Software Carousel and Disk Optimizer—the software that speeds up your disk by cleaning up your files.

Take your choice of either Cubit or DoubleDOS.

See the coupon below for details. But don't wait. This offer expires December 31, 1986. SoftLogic Solutions products are available at your software dealer. Or by calling SoftLogic Solutions at 800-272-9900 (603-627-9900 in NH).

	4X	8X	12X	16X
Word Star	Green	Green	Green	Green
1-2-3	Yellow	Yellow	Yellow	Yellow
BPI	Red	Red	Red	Red

With Software Carousel running in RAM, you can load a program and retrieve it like up to 15 times faster. Test conducted on an IBM XT.

Free Holiday Offer!

Buy Software Carousel and Disk Optimizer and get your choice of either Cubit—the software that packs more data onto less disk space—or DoubleDOS—the software that lets you and your computer work on two different tasks at once.

Enclose proof of purchase for Software Carousel and Disk Optimizer, both registration cards, this coupon, and \$5.00 (check or money order) for shipping and handling (UPS). Offer expires Dec. 31, 1986. Allow up to four weeks for delivery.

YES! Please send my free copy of DoubleDOS Cubit (check one)

LANs UNDER NETWARE

Proteon's ProNET-10 system consists of (1) a network interface card for each PC, plus (2) a wiring center. Each card connects directly to the wiring center with (3) twisted-pair wiring. A fiber-optic version of the system is also available, and you can mix fiber-optic and coaxial within a network. Wiring centers are configured for 4, 8, and 12 workstations, and you can connect the centers in various ways to expand the network. We used an 80286 machine as a server running under (4) Advanced Netware/286.

ProNET-10's topology is a star-shaped ring. The physical cable connecting the workstations weaves back and forth from the stations to the wiring hub, which helps you to isolate and repair problems. But electrically, ProNET-10's media-sharing protocol is a circulating token that passes through an electrical ring of cable connecting the stations together.

wiring hub while the larger IBM Type 1 is used between the hubs. You can also use IBM Type 2 cable—which combines the shielded pairs of Type 1 with several additional pairs of regular telephone wire—in a ProNET-10 installation to spread the cost of wiring among the telephone and LAN systems.

The ProNET-10's wiring hub is a flat

box, about 3.5 inches by 9 inches by 1 inch, with multiple connectors. There are two types of wiring hubs, a nonpowered hub that doesn't need to be plugged into a wall socket and a powered one that does. The nonpowered hub accommodates a four-station network. Five or more stations require a powered hub.

The ideal wire hub for troubleshooting

(we haven't seen it yet) would indicate both the electrical continuity of each leg of the network and whether data is moving on it. The ProNET-10 meets the first requirement. A bright LED glows next to the hub's connectors when there is an electrical connection between the wire center and the workstation. If the network goes down because of wiring problems, the LEDs will give you a clue as to the location of the problem. You can then manipulate a slide switch next to the LED to remove a workstation and its cabling from the network.

The ProNET-10 does not meet the second requirement for the ideal wire hub. The ProNET-10, unlike AT&T's StarLAN, has no lights on its hub that blink when the network is working. To determine whether removing a station has restored the rest of the ProNET-10 network, you have to go to one of the workstations or the server and experiment with some network operation.

SIMPLE AND COMPLEX Small ProNET-10 installations are relatively simple to install. If you need a network with up to 12 workstations, you just run a maximum of 56 feet of cable from any workstation to the hub.

Installations consisting of more than 12 stations or requiring more than 112 feet of cable between stations require a good deal of planning. You construct such networks chaining wiring hubs. You can plug two wiring hubs together, but installations with more than two hubs require the use of either a "nonlocking" or a "clocking" repeater (usually integrated into a third powered wiring hub).

Nonlocking repeaters regenerate packets, whereas clocking repeaters perform synchronization tasks. To link multiple hubs, you need a clocking repeater at either end of the network. A workstation can function as a clocking repeater as long as it is always on when the network is functioning.

Your choice of clocking or nonlocking repeaters will depend on the distance between stations and the configuration of the network. A complex formula, which takes into account the placement of the repeaters, determines the total amount of cable that you can use on the network.

PROBLEM: Handling your need for more megabytes, without spending megabucks on a new drive.

THE SOFTLOGIC SOLUTION: Cubit™

Now get up to twice the capacity from all your storage media.

You know what happens. The more you use your computer, the more information you create. And the faster you fill up your disk.

The 10MB drive that once seemed enormous is now jammed with important files. That 20MB that should have lasted years is crowded in a matter of months.

Of course you could keep buying bigger hard drives. Or you could get Cubit and get the maximum storage space from the drives you already have.

What is Cubit?

In brief, Cubit is an advanced software tool that automatically reduces the number of bytes required to store a file, then converts the file back to its original size when retrieved. Some programmers call this effect "data compression," others, "disk expansion." Either way, the result is the same.

Here's how it works. When Cubit compresses a file, it first compares each word to its massive English word dictionary. Words that match are reduced to a predetermined code of just one, two or three bytes each. It then saves the abbreviated version to disk. Decompression works just the opposite.

To accommodate other words and symbols, Cubit uses two more compression techniques. One assigns new, shorter codes to unusual words. Another compresses according to the frequency of character strings in non-text data. So no matter what kind of files you create, Cubit ensures maximum space savings.

Best of all, you'll be using the same fast, reliable data compression techniques used on mainframe computers for decades.

How much disk space will you save?

Because the vast majority of data created on PC's is standard ASCII text—letters, numbers and other English language symbols—we've optimized Cubit for word processing and database files. With these, you'll get a minimum of 50% expansion on up to a full 100% or more.

At the same time, you can expect a significant 30% to 50% improvement with other kinds of data. Including spreadsheet files, program code, graph and image files, even binary data.

And Cubit works just as well with floppies and tape cassettes as it does with hard disk drives.

Run Cubit where you want, when you want.

Maybe you'll want to use Cubit for all your files, or maybe just some. So Cubit lets you specify exactly which files to work on and which ones to leave alone.

In RAM resident mode, Cubit works quickly and invisibly, compressing and decompressing right from within any program you run. Or use Cubit's powerful file management mode. It supports wild-card and global file names, and addresses sub-directories up to thirty levels deep.

Save time and money, as well as disk space.

A compressed file is a smaller file. So with Cubit, back-ups

take less time, as well as less space. And communicating compressed files means significant savings on phone line charges.

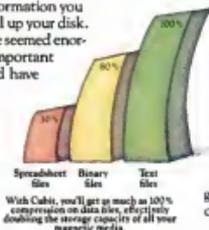

Any way you look at it, Cubit will pay for itself in no time. And that's especially true now.

Special limited time offer.

Buy Cubit now and you'll save even more. Because for a limited time, you can buy Cubit at the special introductory price of just \$49.95! But hurry. This special price won't last long.

Ask for Cubit at your computer dealer. Or order directly from SoftLogic Solutions by calling 800-272-9900 (603-627-9900 in NH), or mail in the coupon below.

Special pricing is available when you buy Cubit along with other SoftLogic products including DoubleDOS, Software Carousel and Disk Optimizer. Ask for details.

COMPU SERVE.

YOU DON'T HAVE TO KNOW HOW IT WORKS TO APPRECIATE ALL IT CAN DO.

CompuServe is a computer information service. You subscribe to it. In return, you have access to an incredible amount of information, entertainment, communications and services. Here are a few of the hundreds of amazing things you can do.

COMMUNICATE

CB Simulator features 72 channels for "talking" with other subscribers. National Bulletin Boards let you post messages where thousands will see them. Friends, relatives and business associates can stay in touch through EasyPlex™ Electronic Mail.

More than 100 CompuServe Forums welcome participation in discussions on all sorts of topics. Software Forums help with online solutions to software problems. Hardware Support Forums cater to specific computers. There's even free software, and online editions of computer periodicals.

HAVE FUN

Play all sorts of sports and entertainment trivia games, brain-teasing educational games and the only online TV-style game show with real prizes. Or for the ultimate in excitement, get into an interactive space adventure.

SHOP

THE ELECTRONIC MALL™ takes you on a coast-to-coast shopping spree of nationally known merchants, without ever leaving home.

SAVE ON TRIPS

With CompuServe's travel services you can scan flight availabilities, find airfare bargains and even book your own flights online. Plus, there are complete listings of over 28,000 hotels worldwide.

BE INFORMED

CompuServe puts all of the latest news at your fingertips, including the AP news wire, the Washington Post, the St. Louis Post-Dispatch, specialized business and trade publications and more. Our executive news service will electronically find, "clip" and file news for you... to read whenever you'd like.

INVEST WISELY

Get complete statistics on over 10,000 NYSE, AMEX and OTC securities. Historic trading statistics on over 90,000 stocks, bonds, funds, issues and options. Five years of daily commodity quotes. Updates on hundreds of companies worldwide. Standard & Poor's Value Line. Over a dozen investment tools.

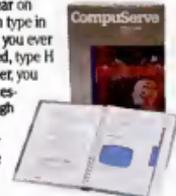

So much for so little.

All you pay is a low one-time cost for a Subscription Kit (suggested retail price \$39.95). Usage rates for standard online time (when CompuServe is most active) are just 10¢ a minute. In most major metropolitan areas you can go online with a local phone call. Plus, you'll receive a \$25.00 Introductory Usage Credit with the purchase of your CompuServe Subscription Kit.

So easy the whole family can go online.

CompuServe is "menu-driven," so beginners can simply read the menus (lists of options) that appear on their screens, then type in their selections. If you ever get lost or confused, type H for help. Remember, you can always ask questions online through our feedback service or phone our Customer Service Department.

Before you can access CompuServe, you need a computer, a modem (to connect your computer to your phone) and, in some cases, some simple communications software. Now you're ready to order. For your low, one-time subscription fee, you'll receive:

- a complete, easy-to-understand, 170-page spiral-bound Users Guide
- your exclusive preliminary password
- a subscription to CompuServe's monthly magazine, *Online Today*
- a \$25.00 usage credit!

To buy a CompuServe Subscription Kit, see your nearest computer dealer. To receive our informative brochure or to order direct, write or call 800-848-8199 (in Ohio, 614-457-0802).

CompuServe. You don't have to know how it works to appreciate all it can do—for you.

LANs UNDER NETWORK

OPERATION ProNET-10 was neither the fastest nor the slowest of the networks we tested. The system ran well and quickly recovered when we tried to disrupt it by disconnecting cables. We tried to introduce electrical "noise" into the shielded twisted-pair cable by running it next to a sparking motor and through an electrical field but detected no effect on network performance.

FLEXIBILITY Proteon's greatest strength is its reliability and flexibility. Many of the company's other products are compatible with the ProNET-10, so you could, for example, use fiber-optic cable on your network. If you needed increased protection against disruption, Proteon offers systems that use redundant wiring. Proteon even offers software that will allow you to add the Department of Defense's Transmission Control Protocol/Internet Protocol (TCP/IP) which gives you network routing and recovery. Hooking up a small ProNET-10 network is fairly simple, but if you need to network a couple of dozen PC-type workstations, you'll find simpler solutions from other vendors.

Standard Microsystems Corp. ARCnet

When IBM Corp. released its token-ring LAN, the company (naturally) got a lot of publicity, even though LANs using tokens for media sharing with a physical star configuration have been available on mainframe, mini, and other systems for years. It was Datapoint Corp. that actually pioneered token-passing technology in the early 1970s with its Attached Resource Computer Network (ARCnet). Now Standard Microsystems Corp. has brought versions of the ARCnet (which remains a registered trademark of Datapoint) to S-100 and PC bus systems and added the ability to attach RS-232C devices. While the ARCnet and IBM token-ring systems are not compatible, the "media-sharing token" concept behind them is similar. Standard Microsystems' ARCnet for the PC combines an ARCnet token system with an excellent interface to Novell's NetWare.

An ARCnet system includes (1) a network interface card for each station and (2) a four- or eight-node wiring hub. The cards connect directly to a hub through (3) an RG-62 cable. A new optional configuration from Standard Microsystems provides for direct connection between workstations in a bus arrangement. The bus uses T-connectors at each station and a terminating resistor at each end of the network. An 80286 acted as the server running under (4) Advanced NetWare/286.

Although ARCnet can be physically configured as either a bus or a star, electrically, it is always configured as a bus connection using a token for media access.

LANs UNDER NETWARE

TOKEN NETWORKS Many journals have debated the technical advantages of token networks. Typically, the argument in favor of token systems is that they are more predictable and reliable under heavy data loads than are CSMA (carrier sense multiple access) systems such as Ethernet. Token access systems pass a message (token) among stations that control which station can transmit. This method is more orderly than the CSMA contention system, under which stations simply transmit when they detect no activity on the network. If two stations on CSMA systems begin their transmissions simultaneously, their messages can collide, causing lost data.

In the ARCnet's scheme, as in other token networks, a master station passes a token to each station in turn. A station can transmit only when it has the token. Unlike other token networks, stations on the ARCnet token networks acknowledge the receipt of messages, ensuring successful communication. The ARCnet system also has special features that improve the addressing efficiency of the token-ring system while retaining its reliability, as well as sophisticated server-to-server protocols that help in linking networks.

WIRING The Standard Microsystems version of the ARCnet simplifies the process of installing and troubleshooting the wiring by using a hub wiring system. In a hub system, each cable from a network station attaches to a central wiring-connection point. If a cable is severed or shorted, it can be easily identified and disconnected from the central point. This connection scheme uses more cable than a bus that runs from station to station, but even so, the ability to isolate bad cable legs is invaluable.

Although the ARCnet's physical configuration looks like that of IBM's token-ring LAN, the electrical configurations of the two systems are, in fact, very different. The IBM system is an electrical ring; its token must flow through every workstation on the ring to complete the circuit. A severed or shorted cable or a bad adapter card will crash the entire network. In contrast, the ARCnet's electrical configuration is a bus. Its token travels down the bus, but because of the central cable hub, a poor connection in a workstation cable or even a

failed adapter card will not disrupt the entire network.

The ARCnet cable hubs can be either passive (unpowered) or active (powered). You can connect a workstation to a passive hub using up to 100 feet of RG-62 coaxial cable. Active hubs regenerate the packet to ensure high-quality transmission over long cables and can drive data over 2,000 feet of cable to a workstation or to another active hub. It is also possible to link active hubs to construct a network with stations up to as far as 4 miles apart. Properly configured, a single ARCnet network could cover over 11 square miles. Almost all other LAN systems would need expensive internetworked servers or special repeaters to cover this much area.

In some installations, it may be impractical to run all of the cables to a central point. Therefore, Standard Microsystems recently released an entirely new network interface card that does not require a hub. The new Model PC200 ARCnet cards can connect up to eight nodes on a maximum of 1,000 feet of cable. You can also connect eight-node network segments through an active repeater or convert the entire system over to a physical star configuration without changing any of the network interface cards.

**FACT FILE**

ARCnet
Standard Microsystems Corp.
35 Marcus Blvd.
Hauppauge, NY 11788
(516) 273-3100

Workstation Requirements: DOS 3.1.
Network Software: *Advanced NetWare* 285; *Vianetix Vianet*.

Pricing: ARCnet-PC100 interface board, \$545; ARCnet-PC200 interface board, \$1,295; Active Link (fiber-optic board), \$375; Active Link-OFT (two-port active hub for PC200), \$1,295; four-port passive hub (for use with PC300), \$100; eight-port active hub, \$885.

In Short: ARCnet performed the best of the networks tested that used an AT as a server, although under increasing network load, ARCnet's throughput rate declines slowly. In addition, ARCnet is a flexible system that lets you start small, but adding wiring hubs gives you room for great expansion.

CIRCLE 600 ON READER SERVICE CARD

TOP-NOTCH PERFORMER In theory, ARCnet's message acknowledgments and traveling packets are supposed to add overhead; nonetheless, the system performed very well on the PC Labs speed and workload tests, and it performed the best of all the networks tested using an IBM PC AT as a server. According to various technical publications, LANs using the ARCnet protocol prevent one station from hogging the network, thereby allowing fair access to all stations. Our benchmark tests showed that the ARCnet is fast under conditions of no load and that under a heavy load, the throughput degrades gracefully, with no sharp performance drops. We were unable to test the ARCnet on the Novell 68B server, but Novell now offers this combination and it should perform very well.

PIECES OF THE LAN Standard Microsystems manufactures its own 9026 LSI CMOS controller chips for its interface cards. The speed and compatibility of these chips are responsible for the LAN's high performance and make installing the LAN simple. Additional support chips interface with the PC's data bus.

The ARCnet PC100 network interface cards come ready to install and have almost no slide jumpers. Some vendors' cards have as many as 40 slide jumpers, all of which must be set correctly for the system to work. All you need to know to install the PC100 cards in your PC is contained in a two-page illustrated guide that describes the proper settings of the rocker switches.

We had no problems using the cards with any PC. They will fit into any slot on an AT but won't take advantage of the AT's 16-bit bus connections.

The ARCnet adapter cards normally use coaxial cable, but versions of the cards designed to interface with fiber-optic cables are also available. One network cable runs from each ARCnet station to the hub—some bus systems require two cables plus T-connectors—cutting down on the wiring mess at the workstations. And you are not required to terminate or switch out the ports on the active hub when they aren't in use. In addition, no special grounding actions are needed for the cables, as they are in some systems.

Your first color monitor should be good enough to be your last.

NEC introduces the only color monitor you need. Superb resolution plus MultiSync for across-the-board compatibility with all three PC graphics boards made by IBM,* for business graphics, CAD/CAM, computer art, and text.

Now there's one high resolution color monitor that does things your way. The MultiSync™ monitor from NEC.

It gives you the best color resolution available at the price.

- Compatibility with the IBM Professional Graphics Adapter, the IBM Enhanced Graphics Adapter, and the IBM Color Graphics Adapter.

Compatibility with the IBM® Enhanced Graphics Adapter Board

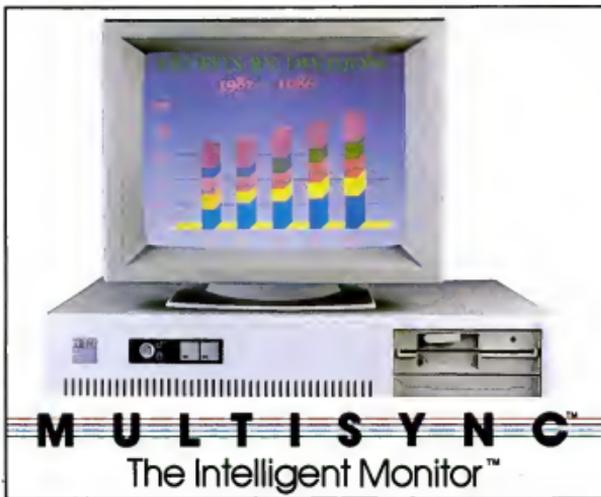

- MultiSync, the NEC feature that automatically adjusts to color adapter board scanning frequencies from 15.75 KHz to 35 KHz—suggesting the possibility that the MultiSync monitor might be compatible with all color graphics boards that are fully compatible with the IBM PC, PC/XT, and PC/AT, now and in the future.

- Full implementation of high resolution graphics software for business and other applications, now and in the future.
- And color capability limited only by the board being used.

See Things Our Way

Until now, you had to choose different color monitors for

compatibility with all three PC color graphics boards made by IBM. With so many board and monitor configurations, folks didn't know which way to look.

The new MultiSync color monitor gives you unique compatibility. As well as TTL and analog color. With 7 switchable text colors. And resolution up to maximum 800 horizontal dots and maximum 560 vertical lines, on a large, 13" diagonal viewing area.

All from NEC, a name respected around the world for advanced, reliable products backed by nationwide service.

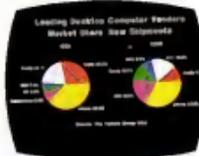

Compatibility with the IBM® Professional Graphics Adapter Board

it's the one color monitor that does everything your way.

Compatibility with the IBM® Color Graphics Adapter Board

But why talk more about it? Visit your nearest dealer and see a graphic demonstration of the new NEC MultiSync monitor's capabilities. Then draw your own conclusions.

NEC

LANs UNDER NETWORK

You can connect non-PC-compatible computers or terminals with RS-232C ports to the network through a product called the ARCnet-Link. This is a separately powered adapter box containing both an RS-232C port and a network connection, which also does the important job of buffering the data going in and out of the slower RS-232C port. We didn't test the ARCnet-Link.

The only improvement I can suggest to the Standard Microsystems hardware would be to add an indicator on the active hub that shows when a workstation has a solid electrical connection. The front of the cabinet containing the hub does have flashing LEDs showing network activity, but some indication of workstation status is useful when you are crouched in a wiring closet trying to figure out why something won't work.

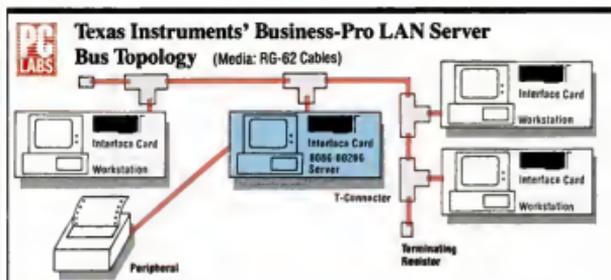

Standard Microsystems supplies *Advanced Netware/286* with its hardware. Standard Microsystems ships Novell's product in the original shrink-wrap with no changes or additions. However, the Standard Microsystems custom processor seems to take to *NetWare* very well.

COSTS The Standard Microsystems Model PC200 network interface board can be connected either in a physical star or bus configuration and sells for \$595. The Model PC100 board, which must be used with an active hub, is priced at \$545. The active hub, which can connect up to eight workstations, carries a price of \$885.

The ARCnet system offers a proven technology that can move a lot of data over a wide area. The flexibility of the newest Standard Microsystems interface cards allows you to start out with a small system at a moderate cost and leaves room for great expansion.

Texas Instruments Business-Pro LAN Server

Texas Instruments has its own line of computers that are PC compatible—except that they use a modified version of MS-DOS and special graphics cards. TI computers run in two modes: TI mode and IBM PC emulation mode. You must run the TI

The Texas Instruments network uses (1) 3Com's EtherLink network interface cards with (2) T-connectors and (3) terminating resistors. (4) RG-62 cables run to and from each network station. (5) The TI Business-Pro acts as a server for either TI or IBM standard workstations. The server runs under (6) Advanced NetWare/E-TI. This system uses the CSMA listen-before-transmit media-sharing protocol on a bus-wiring configuration.

LANs UNDER NETWORK

computer in TI mode to use the TI graphics software. In order for the TI computer to run IBM software or to run on a LAN designed for IBM PCs, you are obliged to switch to the IBM emulation mode. To change modes, you must use a DOS command, which can be an inconvenience when you need to use both the TI graphics software and a LAN.

To help its users, therefore, Texas Instruments designed its own LAN, called the Business-Pro LAN Server, specifically for organizations that have invested in TI and IBM personal computers. Its interfaces allow both the TI and IBM PCs to operate normally on the LAN.

TI PLUS The TI network consists of pieces from several different vendors: its own TI Business-Pro personal computer acting as a file server, networking cards and cables from 3Com, and a version of Novell's *NetWare* called *Advanced NetWare/E-TI*.

The attractively styled Business-Pro is the top of the TI personal computer line. (For a review, see "Power Computing: Alternatives to the IBM PC AT," *PC Magazine*, Volume 5 Number 8.) With a smaller footprint than an AT, the Business-Pro LAN Server can sit next to your desk on its own pedestal mount. It can carry heavy loads of hard disk, tape backup, and IBM PC AT add-on peripherals. In addition, you can augment its 80286 processor with an 80287 math coprocessor and large amounts of internal memory.

TI uses the 3Com EtherLink network interface card, which gives you the Ethernet standard electrical connections and media-sharing protocols (CSMA/CD). The EtherLink card for PC systems is a half-size circuit board containing a VLSI Ethernet Data Link Controller Chip and the network transceiver. The EtherLink Plus card is available for IBM PC AT-type systems that use the faster 16-bit address bus of the AT.

TI has supplied an enhanced version of Novell's *NetWare* with its system. The software comes with boot disks for the workstations (generic versions of *NetWare* require you to generate them yourself using the GENOS [generate operating system] command). If you accept the default values for the buffers and ports in the serv-

er and don't do any special disk drive tests, you can have the network software loaded and ready to go in 15 minutes. TI also customizes *NetWare* to allow TI and PC workstations operating under DOS 2.1 or 3.1 to enter the network.

All of these network pieces hook together into a bus network. Each workstation has two cables attached to the interface connector through a T-connector. The overall length of the network is limited to 1,000 feet of cable, and you must terminate the ends of the cables with special resistors.

PUTTING IT TOGETHER TI's documentation for its network is very comprehensive. I learned more about the technical operation of Ethernet there than I did from textbooks written on the subject. However, the documentation is also exceptionally complicated, and we had difficulty finding the information we needed. TI reprinted most of the Novell documentation and added improved illustrations and descriptions in several areas. Customer support is available from both Novell and TI, but our experience shows that you might still have problems getting answers to questions you

may have about this hybrid network.

Setting up the Business-Pro as a LAN server was fairly straightforward. The TI manual clearly documents the process of preparing the server and installing the interface cards. Installing software on the server was also fairly easy: you just feed disks into the floppy disk drive in response to prompts on the screen.

However, we hit a snag when we tried to install the Business-Pro/*NetWare* workstation software on some of the PCs. The software ran fine on the IBM PC, Zenith, and ITT machines, but it would not run on a new IBM PC AT operating at 8 MHz. When we tried to get a patch to allow the program to run at 8 MHz, we ran into a glitch in TI's technical support. Neither TI nor Novell could help us. Since the same 3Com card runs in the 8-MHz AT under other versions of *NetWare*, as well as under the 3Com networking software, we conclude the problem was caused by customization of the software.

Installing the 3Com cards and cable was also difficult, taking many hours and whispered incantations. Although 3Com claims there is a standard shipping configuration for the networking cards, we received several variations. This is unfortunate because you must set over 40 jumpers on each card.

We finally used a three-man team to set the jumpers: one read the manual, one moved jumpers, and one checked every move. To make matters worse, we had a hard time finding the description of the procedure in the documentation, because the manual includes descriptions of several models of EtherLink cards using several different operating systems.

Commonly, networks neglect to help you diagnose problems. The Business-Pro LAN Server was no exception. When we set up the system, the workstation closest to the server signed on, but other machines farther down the line did not.

We spent a lot of time changing jumpers and swapping cards and trying to reboot the system—until finally we swapped cables. It turned out that we had had a bad cable connector on a PC three machines down the bus from the server. We were very lucky. If the bad cable had been on the workstation farthest from the server, nothing would have worked.

Business-Pro LAN Server
Texas Instruments
Data Systems Group
P.O. Box 809063
Dallas, TX 75380-9063
(800) 527-3500
Workstation Requirements: DOS 3.1,
256K RAM, one floppy disk drive.
Network Software: *Advanced NetWare/E-TI*.

Prices: TI Business-Pro computer, \$5,795;
3Com EtherLink cards, \$750; *Advanced NetWare/E-TI*, \$1,595; 23-foot 3Com cable, \$30; two terminating resistors, \$40.
In Short: The Business-Pro LAN Server networks Texas Instruments and IBM PCs, allowing each to operate in its native mode on the LAN. Although this LAN is slower than other systems, the server can carry heavy loads of hard disk, tape backup, and add-on peripherals. Although TI provides excellent documentation, installation is complicated because you must set over 40 jumpers on each card.

LANs UNDER NETWORK

PERFORMANCE We ran the Business-Pro LAN Server according to the TI instructions, using TI's version of MS-DOS. We kept the machine in the turbo mode, which is supposed to improve performance over the 6-MHz AT-emulation mode. Because of the problem with the AT workstation software, we substituted a PC for the AT we normally used as a workstation for benchmark-testing of the TI system. Theoretically, this should have improved the network's performance on the timing tests, because the faster AT workstation usually puts a heavier load on the network, slowing the performance of the XT that runs the standard timed test.

With the exception of the 8-MHz workstation limitation, the TI version of NetWare ran well on the Business-Pro LAN Server. Our benchmark tests showed that despite its power, the Business-Pro/3Com/NetWare combination slowed more under heavy loads than other networks that used the AT as a server. This slowdown could have been caused by the fact that the version of NetWare provided for our tests was not Advanced NetWare/286, which is designed to allow the 80286 processor to operate efficiently in its "protected" mode. However, by the time this article appears, the manufacturer claims that it will supply the updated NetWare.

COSTS The Business-Pro LAN Server with 512K bytes of RAM, tape backup, color monitor, 40-megabyte hard disk drive, 1.2-megabyte floppy disk drive, and EtherLink card sells for \$12,200. This price includes Novell's NetWare. Each EtherLink card costs \$750, and a 23-foot cable with connectors is \$30. A kit of two terminating resistors is \$40.

FLEXIBILITY If your organization has TI PCs, TI has a network solution that will meet your needs. You can continue to run TI's programs and still integrate IBM PCs into the network. In addition, the Business-Pro LAN Server offers easy archiving and large storage capacities that your organization might need. However, if you intend to use the most modern high-speed AT and AT-alternative machines on the network, you should be sure that TI's workstation software has been modified to support them.

A Networking Tool Kit

Engineers are the master planners of local area networks: they design, install, and configure a LAN system to meet your individual needs. Once it's there, however, it's the network administrator's responsibility to keep the system up and running efficiently. The job includes such tasks as maintaining the system's files, controlling user access, and managing resource sharing. Keeping track of all the separate elements involved looms as no small task—especially if the job happens to be yours.

During the course of our own testing procedures (see "Making Connections: LANs Under NetWare" in this issue), we developed some procedures to make installation and management easier. Here are some tips about batch jobs,

While testing LANs in PC Labs, we learned some valuable lessons—the hard way. This is your chance to benefit from our experience: the tips included here should ease the strain of network installation and administration.

COVER STORY
FRANK J. DERFLER, JR.,
AND ED HALBERT

editing techniques, and other methods that will help you to feel your way around the "LAN mines" of networking.

INSTALLATION Almost all networking software packages require some sort of installation procedure. (A few network servers, such as those from Tallgrass, come with the software installed.) Not even experienced users can always predict whether installation will take a few minutes or several hours.

The two basic types of installation tools are .EXE programs and .BAT script files. These files direct the installation, construct the basic starter system, create directories, and copy files from the disk to your server and perhaps to the user workstation disks as well.

There's nothing standard about this corporate standard.

The standard is MultiMate Advantage.[™] The word processing software program found on the "approved" list of most major companies.

Corporate standard aside, MultiMate Advantage also lives up to people standards. Because it lets you customize to fit your needs.

For example, with the new columnar feature, creating up to eight columns on the screen is no longer wishful thinking.

Neither is printing those columns on a single page. In fact, MultiMate Advantage supports over 350 different printers.

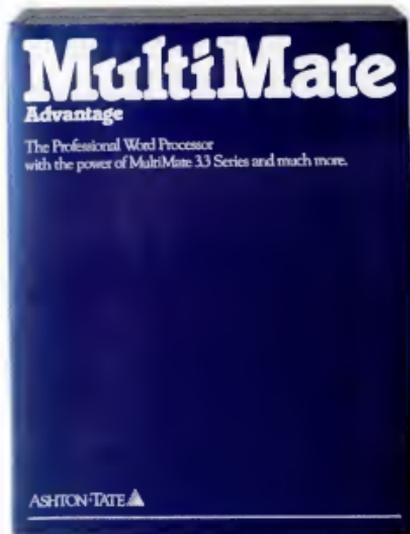

It also supports a new 40,000-word thesaurus. As well as a 110,000-word dictionary (complete with medical and legal jargon), which you can easily customize to include your own frequently used words.

And if you still need more reasons why this corporate standard isn't standard, look no further than MultiMate Advantage's keyboard. It's been specially designed just for word processing.

For the name of your nearest authorized

Ashton-Tate dealer, call (800) 437-4329, Extension 234. And get your hands on MultiMate Advantage.

It's the first word processing program good enough to live up to everyone's standards.

Requires IBM[®] PC or 100% compatible. Trademarks/owner: MultiMate/Multimate International, an Ashton-Tate company; Ashton-Tate/Ashton-Tate; IBM/International Business Machines Corp. © 1986 Ashton-Tate. All rights reserved.

CIRCLE 210 ON READER SERVICE CARD

■ NETWORKING TOOL KIT

Many installation procedures are easy to understand and require you to do nothing more than hold your breath as you watch the hard disk light come on and stay on for a long time. At this point, our best—and most elementary—advice is always to make backups whenever possible. Also, read the manuals—especially the photocopied pages stapled together and folded up in the front of the manual. They contain many of the company's installation tips as well as any changes to the manual.

No problems are more frustrating than those which abort the installation process. Getting messages such as "Abend invalid parameter" or "File not found installation terminated" on your screen can be the start of a bad day. During the PC Labs LAN evaluation process, we started many bad days. However, most of our installation problems came from hardware, not software, with the major hardware problem being improperly configured boards.

If your installation program is on a floppy disk that must be booted and is not DOS readable, there is only one thing to do: make sure that you have met all of the manual's requirements. However, you have a better opportunity to correct or modify problems at start-up if the program is a batch file. When you get a nonexplanatory installation aborted message, you can do some detective work by making two quick changes to the file.

It's simple to remove the ECHO OFF statement that usually precedes any batch procedure. Then the screen will display the job stream, and you can see the action that gave you those wonderful "file not found" or "file creation error" messages. The problem will be easy to locate: it will be the command just before the error message.

Many batch job writers put a > NUL: at the end of the network program command line. This is a redirection technique that sends the output from the program to a place in the computer where it is neither saved nor displayed—more commonly known as the "bit bucket." This technique keeps the screen clear of any extraneous messages. To make a change, simply replace the > NUL: with blanks or > PRN:. Redirecting the output to the printer creates a log of any messages that the program might report to you. This log also serves as

a handy reference when you're talking to technical support staff about a problem.

TUNING AND PRUNING Once installation is finished, you'll probably have to configure, or "fine tune," the network to your particular needs. On the simplest level, this refers to increasing or decreasing the buffers or printer spools. Expect to use the network for a while before you learn

■ Many batch job writers put a >NUL: at the end of the network program command line. Simply replace it with >PRN: to create a log of messages the program reports.

the optimum settings. Changing them usually involves editing CONFIG.SYS, AUTOEXEC.BAT, and any start-up batch files, and such changes are generally made to the parameters of start-up networking programs. Hence, using thoughtfully planned batch files, the network administrator can customize a network for specific needs.

When setting up batch files, the single most important procedure is to document them. Sounds silly, doesn't it? After all, batch files are easy to read and their func-

tions are evident. That might be true, but what isn't always clear or remembered is why the functions are performed in the order or manner called for in the batch file.

When the disks in the PC LAN Lab settled to rest after a long week of testing and evaluation, we gathered all the batch jobs we had created and found that they comprised pretty basic tools for network management. We hope you will find them as valuable as we have.

HUNKILL.BAT Doing disk file backups is critical, but it also can be confusing. Sometimes copy actions just don't work the way you want them to. If you start to copy files from a floppy disk to a directory on the hard disk and suddenly realize that this is not what you want to do, HUNKILL.BAT (Figure 1) can help. This routine will delete files on the target disk only if they exist on the source disk. You do not have to look at all of the directories of each disk to determine which files you accidentally copied. The syntax is:

```
HUNKILL source_filespec target_filespec
```

SAVEPATH.BAT Once you start a software package on your server, you may wish to temporarily alter the path that was created by the start-up job stream. Many networks set up a PATH statement in the AUTOEXEC.BAT file. But before altering the path, you should save the current path status for later use. The SAVEPATH.BAT routine shown in Figure 2 uses redirection and takes advantage of the fact that the PATH statement by itself will display the current path. If you redirect the output from the PATH command to a batch file, simply executing that file

```
ECHO OFF
FOR %* IN (%*.*) DO DEL %*%*
```

Figure 1: The HUNKILL.BAT routine will delete files on a target disk only if the files exist on the source disk. The syntax is HUNKILL source_filespec target_filespec.

```
ECHO OFF
PATH > OLDPATH.BAT
ECHO Current PATH status saved in a file
named OLDPATH.BAT. > CON:
```

Figure 2: SAVEPATH.BAT provides a safety net by saving a PATH statement while you try out various alternatives. The batch file will reinstate the original path when run.

Once upon a midday dreary,

While I pondered, weak and teary,
How to find some missing theory,
For my micro to restore;

NTR (No Tools Required) Workstation Furniture

Great. You bought this incredible \$8,000 computer complete with printer, monitor all kinds of documentation, and other stuff. But now that you're home, what do you put it all on? Well, you could take over the kitchen table, set up a couple of TV trays in the den, or do it the easy way. Give us a call.

- Desk measures 36"W x 29"D x 28"H, adjustable legs for uneven floors
- Made of highest quality steel, with laminated 1 1/4" thick tabletop (available in oak, teak, or walnut finishes)
- Heavy-duty construction, crafted to the specifications of a major American computer manufacturer
- Large, integral shelf for storing paper, manuals, and other materials
- No Tools Required for assembly, precision snap-fit components

For any computer \$99.

• 128k Memory Upgrade Set for IBM-AT System Board (9 chips piggybacked)	39.
• 256k Memory Upgrade Set for any IBM-AT memory board (9 chips)	39.

DISKS

All disks have a lifetime warranty.	
DS/DD Disks for the PC & XT (40 TPI).	
• Verbatim DataLife (10 disks per box)	15.
• Maxwell MD-2 (10 disks per box)	19.
DS/High Density Disks for the AT (96 TPI).	
• Fuji (10 disks per box)	27.
• Verbatim (10 disks per box)	29.
• Maxwell (10 disks per box)	34.
3 1/2" Double-sided Diskettes (720k)	
• Verbatim (10 diskettes)	26.
• Sony (10 diskettes)	26.
• MAXELL (10 diskettes)	26.
• 3M (10 diskettes)	27.
• BASF (5 diskettes)	14.

PC Connection Service Center

Did you know that we are an authorized Epson and IOMEGA service center? We typically offer twenty-four hour turnaround on serviced items. Our labor charge is only \$25 per hour. Call 1-800-PCC-TECH extension 138 for a free telephone diagnosis.

Junior Happiness

Christmas comes but once a year so our Jr. Specials now are here bringing joy to Juniors far and near

• **Jr. Drive Kit** (includes Creative Firmware Drive IIA adapter, power supply and Control Data Floppy Drive) \$199.

ALPHA SOFTWARE

• **Jr. Electric Desk** (includes word processor, database, spreadsheet, communications on 2 cartridges, one program disk and one tutorial disk) . . . \$69.

MOUSE SYSTEMS

• **Jr. Mouse w/PC Paint 2.8** (w/software and pad, reqs. 256k and the IBM-PCjr adapter for serial devices) \$99.

FINANCIAL SOFTWARE

• **Jr. Financier** (reqs. IBM BASIC cartridge) \$19.

KEYTRONIC

• **Jr. 5151 Deluxe Keyboard** \$169.

MISCELLANEOUS

Automation Facilities

• Floppicide Disk Drive Cleaner \$18.

Environmental Software

• Nylon Computer Covers PC, XT or AT (navy, burgundy or silver) 20.

Innovative Concepts

• Flip n' File 50 (holds 50 disks) 16.

• Flip Sort (holds 70 disks) 15.

Kalmar

• Teakwood Disk Holder (holds 50) 19.

• Teakwood Disk Holder (holds 100) 29.

PC Connection

• Computer Toolkit (all the tools you need to go with your PC in a software style binder; great gift idea!) 29.

• Clear Hard Plastic Keyboard Cover and Copy Holder (PC & XT) 16.

OUR POLICY

- We accept VISA and MASTERCARD.
- No surcharge added for charge orders.
- Your card is not charged until we ship.
- If we must ship a partial order, we never charge freight on the shipment(s) that complete the order.
- No sales tax.
- All U.S. shipments insured; no additional charge.
- APO/FPO orders usually shipped 1st Class Mail.
- Allow 1 week for personal and company checks to clear.
- UPS Next-Day-Air available.
- COD max. \$1000. Cash or certified check.
- 120 day limited warranty on all products.*
- To order, call us anytime Monday thru Friday 9:00 to 9:00, or Saturday 9:00 to 5:30. You can call our business offices at 603/446-3383 Monday through Friday 9:00 to 5:30.

INFORMATION SERVICES

- **Compuserve Information Service** (includes subscription, manual, \$25 usage credit, monthly publications) 24.
- **Dow Jones Membership Kit** 24.
- **The Source** 30.

PC Puzzle.

Putting the PC's together again.

In the enigmatic town of Marlow, NH (pop. 544), there's nothing we like better than a good fit. Fields and streams. Peaches and cream. You and your lean mean micro machine.

In the old days, putting together a PC system was child's play. But now there are thousands of programs and peripherals to choose from, and it takes experience to find a perfect match. Other companies might try to solve your PC puzzle by shoving in any old component. We always take the time to find the right pieces for your applications, your budget, and your existing system.

Get the picture?

You see, there's no point in buying a board without the bytes to boot it. Or a printer without a port to

prompt it. Or a game without the graphics to grab it.

There's a solution to all these PC puzzles, but you have to see the whole picture—and we're in the perfect position to do it. Because we've helped hundreds of thousands of PC users piece their systems together.

See the Connection?

Since we spend all day helping you solve your

PC puzzles, we thought you might enjoy spending some leisure time solving ours. So we're offering a free 1000 piece PC Connection jigsaw puzzle to anyone who places a \$500 order between now and November 31.

Just call 1-800/243-8088 or 1-603/446-3383, M-F 9:00 to 9:00; Saturday to 5:30. If you're planning to visit, call ahead to make sure what you want is in stock.

The PC Connection puzzle, featuring our co-founding little mascots in one of their most famous poses. Suitable for beginners and advanced users. Offer not available to net accounts. Limit one per customer.

For the IBM-PC (XT & AT) exclusively.

PC CONNECTION

■ NETWORKING TOOL KIT

will set the path back to what it was. You could also use this technique to duplicate the same path for another system or with the DOS SET command to save the environmental parameters.

LOGON.BAT While most network systems have some sort of log-on program and a set of welcome messages, you might prefer to customize log-on procedures.

In the example shown in Figure 3, the environmental variable USER sets the user's log-on name. This variable is then accessible by any other batch job that refers to "%USER%". The network log-on command follows with its own parameters. If the network log-on command requires more than one parameter—such as a password—you must also pass that parameter to the log-on command. You may or

may not want to put the > NUL: after the log-on command. Use this technique if you don't really want a welcome message. Leaving > NUL: off will let you know of any errors during the log-on message.

Figure 3 also shows the use of a network command called LINK. This command is found in 3Com's Ethernet, AT&T's StarLAN, and similar systems. System administrators in Novell networks might substitute the MAP command. In general, such commands link or map certain subdirectories on the server's hard disk to a workstation drive letter. In this case, we linked a named subdirectory on the server's disk as a D: drive.

Then the program goes to the user's home directory by using the USER environmental variable. The next three lines are meant to be used with another utility,

called WHOSON, which is described later. It copies any arbitrary file in the WHO directory to a file called by whatever the user's log-on name is. This stratagem serves as a flag to display the names of any active users on the network if such a utility

■ Some networking software doesn't include a function that tells you who is using the system. With WHOSON.BAT, you can see who is actively logged on.

is not already provided. The log-on times are recorded in a journal file for accounting purposes. The syntax for the example shown in Figure 3 is:

```
LOGON myname password
```

Using Figure 3 as a model, you can change the syntax of the LOGON and LINK commands to match the command names used in different networks.

LOGOUT.BAT Use the LOGOUT.BAT routine shown in Figure 4 in conjunction with the LOGON command. Essentially, it performs the reverse of its sister batch file, LOGON.BAT. The reason that we create a link at the beginning is to make absolutely sure that we can go back to the Y: drive later to update the USERLOG.FIL and the WHO directory. Then we unlink and return to the A: or starting drive and use the network log-out command. The syntax is LOGOUT.

WHOSON.BAT Some networking software products do not include a function that tells you who is using the system. With the little batch file called WHOSON.BAT (Figure 5), you can quickly see who is actively logged on to the network—providing, of course, that all the network users are using the two

```
ECHO OFF
CLS
SET USER=%1
(logon) \\servername\%1 %2 >          (example only)
(link) d: \\servername\sharename     (example only)
d:
CD %USER%
COPY d:\WHO\X d:\WHO\%1.USR > NUL:
ECHO User: %1 signed on > d:\WHO\USERLOG.FIL
TIME < d:\WHO\CR > d:\WHO\USERLOG.FIL
```

Figure 3: LOGON.BAT creates a customized log-on procedure. The syntax is LOGON myname password.

```
ECHO OFF
CLS
(link) d: \\servername\sharename     (example only)
DEL d:\WHO\%USER%.USR
ECHO User: %USER% signed off > d:\WHO\USERLOG.FIL
TIME < d:\WHO\CR > d:\WHO\USERLOG.FIL
(unlink) d:                          (example only)
A:
(logout)                               (example only)
```

Figure 4: LOGOUT.BAT is the complementary command to the log-on procedure shown in Figure 3. The syntax is LOGOUT.

```
ECHO OFF
CLS
(link) d: \\servername\sharename     (example only)
d:
ECHO Users currently logged on: > con:
DIR %WHO%\*.USR
(unlink) d:                          (example only)
```

Figure 5: WHOSON.BAT, when used together with LOGON.BAT and LOGOUT.BAT, will give you a status report showing which users are currently logged on to the network.

AT jr. NOW \$599.

FREE! A \$185.00 VALUE.
With any order of \$1,000 or more, AMT will send you, absolutely FREE, a Micro brand dress wristwatch. Finest precision Japanese quartz movement. Specify male or female size.

LAUGH, CLONE, LAUGH! Who would guess that our AT jr has more on the ball than his big brother?

AT jr. not only delivers fantastic features at fabulous prices, but gives you top quality in design, components, materials, and construction!

And for reliability, every AT jr. is burned-in at the factory prior to shipment.

No IBM® compatible system gives you more capability and value for your dollar than our incredible AT jr.

AT jr. This feature-packed model is based on an Intel 8088-2 (or NEC V20-8) CPU, running at 4.77 MHz or 8 MHz, selectable; handles PC DOS®, MS DOS®, XENIX®, and other operating systems, plus a full range of IBM-compatible software.

The standard system has a "0" wait state on memory, and operates many times faster than the IBM PC/XT®. Offers 640 KB of RAM on

the motherboard; 360 KB floppy disk drive; eight expansion slots; LED indicator for the turbo mode; AT-style keyboard; 135-watt integral power supply; and security key lock. Optional features include a 40 MB hard disk (38 ms), EGA, and an 8087-2 math co-processor.

LAP TOP. AMT's compact Lap Top system gives you full IBM compatibility in less than 12.2 pounds of high-powered computer.

Features an 80C86 microprocessor, giving you twice the speed of IBM's lap top; 640 KB of memory; two 720 KB, 3.5-inch disk drives; an 80-by-25 LCD display with 640 x 200 resolution; RGB and printer ports; and a 1200 baud internal modem, optional.

AMT-286. AMT's top-of-the-line AT system outperforms the IBM PC AT™ at a fraction of the

price. Tagged "Best Priced" by PC Week, March 1986 issue.

Our phenomenal AT has a 16-bit Intel 80286 CPU running at 8 MHz (10 MHz or 12 MHz optional); 640 KB of RAM, expandable to 1 MB; 1.2 MB floppy disk drive; accommodations for 20, 30, or 40 MB hard disk drive; a socket for an Intel 80287 math co-processor; and a "0" wait state on memory, optional.

■ NETWORKING TOOL KIT

LOGON and LOGOUT commands as described above. The syntax is WHOSON.

MEMO.BAT Many networks don't come with a mail utility program. MEMO.BAT lets users create simple memos with EDLIN and then save and retrieve them. This routine (Figure 6) will put the time and user stamp in the memo text after it is created. The first parameter gives the type of function that you want memo file to do, read, or send. The second, used only with Send, indicates the user name of the person to whom you wish to send a memo. The syntax is:

```
MEMO r
```

or:

```
MEMO s dave
```

TASK.BAT During our testing, we found we needed some convenient way to start running benchmark task files

on each workstation in the network. TASK.BAT (Figure 7) was our solution. It permits remote control of batch jobs run-

ning on different network workstations. You can use it to run backups, do training, or to test the network in various ways. The

```

ECHO OFF
CLS
IF %1. == .R. GOTO READ
IF %1. == .r. GOTO READ
IF %1. == .. GOTO READ
ECHO Enter the memo text below using EDLIN. > con:
ECHO When finished, file the text > con:
EDLIN TEMP.FIL
ECHO Linking to network drive > con:
(link) d: \\servername\sharename (example only)
ECHO Memo from: %USER% >> d:\%2\MEMO.BOX
TIME < CR >> d:\%2\MEMO.BOX
COPY d:\%2\MEMO.BOX+TEMP.FIL d:\%2\MEMO.BOX > NUL:
ECHO Memo sent to: %2 > CON:
GOTO END
:READ
(link) d: \\servername\sharename (example only)
MORE < d:\MEMO.BOX
:END
    
```

Figure 6: The first two parameters in MEMO.BAT allow you to either read or send a memo. The syntax is MEMO r or MEMO s dave.

TIME LINE
A Powerful Management Tool for Planning and Tracking Projects

KEY FEATURES

- Unlimited Number of Tasks, Dependencies, Resources, and Cost Categories
- Resource Limiting

THE CORRESPONDENT™ HAS ARRIVED READY TO DO BUSINESS WITH THE IBM CONVERTIBLE®

An internal modem developed by Holmes Microsystems for the IBM Convertible® is NOW available end ready for shipment.

The Correspondent™ is a 300/1200 baud, Hayes® compatible, internal direct connect modem. The Correspondent, with it's software, allows for use of the most popular communications software such as Crosstalk™, Smartcom II™, Access™, and PC Talk™.

FEATURES

- Internal Modem - no need to have expensive serial port.
- Hayes Compatible - go with the industry standard.
- Low power operation - ideal for the Convertible® environment.
- Installation - requires only a Phillips screwdriver.
- Compatibility - communicates with all popular modem software.
- Comes complete - software, modem, and phone cable.
- Auto Answer / Auto dial - no awkward or tedious software steps.
- Introductory Price - 299.00. Reg. 399.00

As you can see the Correspondent™ has definitely arrived. We also have very attractive dealer Margins.

Ask us about our 35 disk drive for the PC as well.

International Graphics
Division.

AMT-286.
\$1199.

The IBM PC AT® laid the foundation. AMT accepted the challenge, and put its AMT-286 into orbit. Now you can get the best of both worlds at a fraction of IBM's price!

★ **SPEED.** The standard AMT-286 offers a 10/6MHz switchable clock rate, with a 12/6MHz switchable clock available optionally. That's 75% to 100% faster than the IBM PC AT.

MAIN MEMORY. User-friendly programming takes lots of RAM. The AMT-286 comes with 640K, but can be expanded to an incredible 6 MB. IBM can't say that.

MASS STORAGE. Up to 60,000 pages of words and numbers—a full 120 MB of storage—can be crammed into the AMT-286 hard disks. That's twice what the IBM PC AT can handle.

OTHER GOODIES. Intel's fabulous 80286 16-bit microprocessor chip on an American-made motherboard. 1.2 MB floppy disk; and accommodations for an 80287 math co-processor. The system runs all software and accepts all hardware designed for the IBM PC AT.

For \$1199, how can you lose?

*Registered trademarks IBM, IBM PC/XT, IBM PC AT, International Business Machines Corporation

AT Jr.
\$599.

This feature-packed model has an Intel 8088-2 running at 4.77MHz or 8MHz, selectable—many times faster than the IBM PC/XT®. Also has a "O" wait state on memory, and provides 640 KB of RAM on the motherboard. Offers eight expansion slots, an LED indicator for the turbo mode, and a key lock. Optional features include a hard disk, up to 40 MB (38 ms), EGA, and an 8087-2 math co-processor.

Says **PC Magazine**, October 14:
"AT Jr. earned the lab staff's praise for... construction quality!"

All this—and only 15 pounds!

Power for performance:

- IBM PC AT compatible
- 80286 processor, running at 8MHz
- MS-DOS™ 2.11* operating system

More storage for more applications:

- 640KB RAM, extendable to 2.6MB
- Built-in 10MB hard disk
- Built-in 720KB 3½" diskette drive

The display with clear advantages:

- High-resolution gas plasma display
- IBM Color Graphics Adapter (CGA) compatible
- 80 x 25 character display
- 640 x 400 bit-mapped graphics display

Interfaces to make connections a snap:

- RGB color monitor port
- Parallel printer port
- RS-232C serial port

Built-in convenience:

- Full-sized 81-key keyboard
- 110/220 VAC switch-selectable power supply
- Only 12.2" W x 3.1" H x 14.2" D

Important extras included:

- SideKick® and SuperKey® software
- Attractive carrying case

"Big" system expansion options:

- Internal 300/1200 bps Hayes®-compatible modem
- Internal 2MB extended memory card
- 15-key numeric keypad
- External 5¼" 360KB diskette drive
- Floppy Link to desktop 5¼" diskette drive
- Expansion chassis with five IBM-compatible slots

The T3100. So powerful—and so portable—it's like being able to take your whole office wherever you work.

14" x 12" x 10MB x 80286

AT Power, Toshiba-Style.

Until now, working away from your office meant having to settle for lesser computers—or no computer at all.

Toshiba ends that compromise. The T3100 delivers the power of an IBM® PC AT™ in a lean, 15-pound computer that you can take with you. With a full-sized keyboard and advanced gas plasma display that give you equal comfort and clarity on your desk—or on the road.

Don't let its size fool you.

The T3100 is less than a third the size of the COMPAQ® Portable II™ yet offers the power and expandability of a full-function IBM compatible desktop system. You get the speed and

ease of a built-in hard disk, communications and expansion options, and more—including dual-voltage power that lets you plug in and go to work just about anywhere in the world.

*Okay, we exaggerated. It's actually 14.2" x 12.2". But you really get a 10.6MB built-in hard disk.

See the system that has all of the industry experts so excited. Call: **1-800-457-7777** for your nearest Toshiba computer and printer dealer.

■ NETWORKING TOOL KIT

routine requires several utility files along with TASK and DO.BAT (described below) to work correctly; those most commonly used are CR (a file containing a single carriage return) and X (a file containing a single character for use in copies).

TASK.BAT uses flags to control its operation. The flags are actually files in a separate shared directory on a networked drive called, here, d:\FLAGS.

The flag file is read by each workstation in the network and, based on the status of the flag file, control is then passed to the proper routine. The flag file GO will start the selected task. When the task is completed, both the flag file and the GO files are then deleted.

EXPANDABLE BATCH FILE As you can see, the structure of this routine can be easily expanded to include as much or as little as you want. Anything that can be accomplished without user intervention through a batch job can be implemented in this job stream. Remember, however, that if you want to call one batch job from another, you must precede the name with COMMAND. Since you cannot nest batch files, you must load a copy of COMMAND.COM to run the batch file. Many tasks can be set up to run and then scheduled to be run. Any other names you choose can be substituted for FILEx and TASKx. The flag ABORT is used to shut down the TASK manager.

DO.BAT The DO.BAT routine shown in Figure 8 will start a task on any machine; but that machine must have a copy of TASK.BAT. Also the drive D: must be a valid network drive that is shareable by both the task-running machine and the task-controlling machine. Depending on user-specified parameters, TASK may be readied and started later or started immediately. The syntax for DO.BAT is:

```
DO task1
or
DO task1 go
to start the task.
```

Remember the upper- and lowercase rule in batch file variables: Variables must match in upper- and lowercase as well as in spelling. The parameter test values in the

Figure 8: DO.BAT will remotely start a task on any machine running TASK.BAT. The syntax for DO.BAT is Do task1 or Do task1 go.

line IF %1. == .task1. GOTO TASK1 in the batch file must be consistent with the user's input when the batch file is called. It is preferable to make these values all lowercase. If you look at the COPY commands in each task group, you will notice the file X being copied to a flag file. You must remember to include this X file (or any other similar 1-byte file) in your shared directory.

Remember, it's important that the structure of these batch files must match exactly: There must be an entry or routine in TASK.BAT and a corresponding entry in DO.BAT (compare Figures 7 and 8) for each of these services to be used.

HEARTFELT BATCH FILES Good batch files are at the heart of any successful network operation. The ability to create batch files that meet the needs of the network users is a key skill for anyone involved in network administration. The examples described in this article should help you understand some of the basic tools available to you.

The inherent flexibility of a micro-environment LAN system is too often offset by resistance on the part of PC users to learning new commands or procedures. So be prepared to spend much of your time creating an ever-increasing number of batch files for your users.

EXTEND YOUR COMPUTING POWER

REMOTE™ software lets you run almost any program, from any location, as if you were there.

REMOTE is the software that turns your personal computer into a host computer. You or anyone you choose can dial it up from almost any terminal in almost any location, and run most popular application programs such as word processing, spreadsheets, and data base managers.

You'll see the program on your dial in terminal screen as if you were seated at the host PC.

While REMOTE software itself becomes transparent in use, it offers some very tangible benefits:

- You don't need a second PC to do the job of two. Almost any terminal or terminal emulator will do. The only software you need is the software in your host PC.

CIRCLE 326 ON READER SERVICE CARD

- Each of several different users can call in from anywhere in the world and use the host PC and software. REMOTE software includes a sophisticated electronic mail system with encrypted messages and individual password protection.
- You can transfer files to and from the host computer, using the CROSSTALK® or XMODEM protocol.
- Programmers and software vendors can use REMOTE software to debug a client's software by phone, without leaving their own offices.

Imagine the potential REMOTE software has in extending the power of your own PC. Ask your dealer, or write.

AS FAST AS AN AT—OR FASTER

... but much less expensive. Here are four more 80286-based computers that offer AT power and compatibility at prices that will leave room in your budget for add-ons and software.

When *PC Magazine* put out the call for low-cost AT-compatible personal computers, the machines began to arrive in a swift and steady stream that's still flowing. "The Cheapest ATs Ever" (*PC Magazine*, Volume 5 Number 18) took a close look at eight machines, and although the testing yielded no real superstars, several worthy contenders did emerge. Now, four more of the cheapest ATs ever join the low-cost ranks.

■ AT COMPATIBLES

ALR System 286 ALR DART

Most IBM AT compatibles bear a striking resemblance to the original, and the System 286 from Advanced Logic Research is no exception. Some minor differences include the logo on the front and cutouts at the back for three DB25 and two DB9 connectors. Inside the machine, however, lurks one striking difference: the system board can accommodate 72 memory chips, for a total capacity of 2 megabytes.

The base ALR System 286 sells for \$1,995. Adding a monitor, monitor card, and hard disk brings your total cost to \$3,295.

The machine appears well constructed, with a metal chassis and cover. Expansion cards slide easily into the slots. About 10 percent of the system board is underneath the power supply, including half of the battery that provides power to the CMOS RAM. This makes battery replacement a little tricky, but it can be accomplished without removing the power supply.

ALR includes a keyboard that follows the old IBM PC AT layout. This keyboard, manufactured in Thailand, has a nice feel to it, with a consistent resistance to the touch throughout a key's full travel. Green LEDs are embedded in the NumLock, ScrollLock, and CapsLock keys, but under normal office lighting it is difficult to tell whether the LEDs are on or off.

QUALITY OR LUCK? The monitor offered with the fully configured System 286 is the amber Quimax DM-14. The moni-

The system board for Advanced Logic Research's System 286 and DART accommodates 72 memory chips. This, along with an on-board parallel port and dual serial port board, makes for substantial savings on memory expansion.

tor, which rests on a tilt-and-swivel base, has a modern look, but the only available controls are contrast and brightness. However, due to either stiff quality control or sheer luck, the display quality of the unit tested was excellent, so no other controls were necessary.

The system board contains a DIP switch with eight settings and a variety of jumpers that let you set the system configurations for the appropriate amount of RAM (512K bytes through 2 megabytes), the type of video, the parallel port, and the clock speed. The clock speed is controlled by a jumper setting that switches between 6 and 8 MHz.

PC Labs benchmark tests performed at the System 286's 8-MHz speed showed results comparable to other 80286-based machines running at that speed. The hard disk drive sold with the fully configured System 286 is a 20-megabyte Seagate ST-4026. The ST-4026's measured average access time was a respectable 39.54 milliseconds.

The dual-port serial card included with the base System 286 configuration has two

connectors, a DB25 and DB9. Both support the RS-232 standard, and the DB25 connector supports the RS-422 as well.

ALR's documentation includes all the information you need to get started, as well as helpful technical details such as a list of advanced diagnostic error messages. Although the packaging of the manual is not particularly attractive, the content is certainly useful.

In case 8 MHz isn't fast enough for you, ALR markets a 10-MHz version called the DART. The two computers are almost identical; the DART, however, has a 10-MHz 80286 processor, a 20-MHz crystal, 120-nanosecond memory chips instead of 150 nanosecond, and minor design changes to the system board.

Benchmark tests show that the DART, as expected, runs approximately 20 percent faster than the 8-MHz System 286. The base configuration adds another 512K bytes of RAM to the System 286's configuration and sells for \$2,495.

The ALR System 286 is not the cheapest AT alternative, but it offers some solid trade-offs. Foremost is the potential for 2

In Short: Reliable performance and high-quality components make these computers good choices even though they are priced higher than some of their competitors.

CIRCLE 89 ON READER SERVICE CARD

Announcing the fastest most amazing way to deal with all your random information.

TORNADO NOTES™

Tornado Notes lets you store, combine, and find windows of information—instantly. It's easy to use, yet powerful. For your IBM-PC.

■ New Concept

Now there is a quick FREE-FORM way to deal with all your notes, contacts, ideas, and other random information—Tornado Notes. It's memory-resident and based on a totally new concept that is turning skeptics into fanatics. It not only lets you instantly enter, combine, and find any type of information—it helps you remember more, make better decisions, and spend your time on the right things. Whether you are a business executive, computer programmer, writer, or zoologist, Tornado Notes will significantly improve the way you work and think—or your money back. And it's fun too!

■ Friendly Power

Tornado Notes lets you do everything from managing a busy desk, to following up on sales leads, to planning a new invention. In up to 500 windows! You can even do simple wordprocessing. To start a new note all you do is press N (for Note)—no cumbersome file names—no

extra keystrokes. It's quick and easy. And each note has its own window—so you can separate your information. When you need to find a note (or group of related notes), all you do is press G (for Get) with any word or phrase from any note—you'll see the search happen as you type! Or you can look through your notes with the arrow keys in windows that instantly pile up and lift away. These are just three of over 18 features that both beginners and experts are raving about. But don't let the easy commands fool you—Tornado Notes is a powerful productivity tool.

■ REAL Intelligence

We don't claim any outer-space "Artificial Intelligence". But, when Harry calls you on the phone...in two seconds flat, from 287 electronic notes, you'll get the 6 notes on Harry...before he even finishes his first sentence! That's just REAL intelligence.

■ Text Spreadsheet

Tornado Notes has NOTHING to do with programs that make outlines or "attach"

notes. It's like a spreadsheet for text! And it's as far ahead of "resident notepads" as Lotus 1-2-3™ is from an ABACUS!

■ Serious Fun

Tornado Notes is fun to use. But most important, it becomes a focal point for whatever you do, with a surprisingly widespread effect on the way you work and think. User surveys show you may well use Tornado Notes more than any other software package! Order today.

Dealer Inquiries Invited

What's the Difference Between this Bunch of PCs..

And this Pair of **True-Blue** PC Compatibles?

How Well They're Made... And How Wealthy They Can Make You.

Fact is, there's a wealth of difference between Victor's VPC II PC/XT and V286 PC AT compatibles and the potpourri of PCs cluttering the market.

The difference: reliability—an ongoing commitment that's made Victor a leading manufacturer of office machines for over 68 years. Reliability that comes from quality components. Quality construction. Quality products that deliver the consistent high performance—and high profit performance—on which consumers and computer retailers can rely.

So it comes as no surprise that Victor's prowess as a manufacturer of powerful PC compatibles keeps earning mighty praise these days. In fact, in a recent *PC Magazine* product comparison, the superiority of Victor's workmanship, documentation, and customer support were cited in declaring the VPC II "...a clear cut above," the *Editor's Choice*.

And it also comes as no surprise that Victor is fast-becoming the Dealers' Choice, too. Because Victor's powerful PC compatibles are not only earning mighty praise, they're earning dealers mighty profits. And here's why:

- ★ Lucrative Discounts Off Competitive List Prices
- ★ No Cash Up Front
- ★ An Attractive Start-Up Package
- ★ Prompt Shipment
- ★ Strong Advertising Support
- ★ End-User Sales Programs
- ★ Strong Nationwide Service Support

Learn more about just how committed we are to supporting your selling efforts. Give us a call—toll-free, at (800) 248-5252, and ask for either Jim James or Terry Towers. We think you'll find that, feature for feature, Victor's Dealer Program is one of the most attractive packages in the business.

VICTOR

Where Reliability is Not Only a Serious Business...
It's a Lasting Concern.

CIRCLE 349 ON READER SERVICE CARD

■ AT COMPATIBLES

megabytes of on-board memory, which should save you some money on memory expansion. The on-board parallel port and the dual-serial port board also represent savings. In addition, the System 286 is one of the few compatibles that earns high marks for each component—system unit, keyboard, and monitor.

■ Tech PC AT Desktop

It's the rare AT-style computer vendor that doesn't attempt to improve on the original IBM model in some way, but this is the case with Tech Personal Computers. Its Tech PC AT Desktop duplicates the features of IBM's PC AT right down to the 512K bytes of RAM on the system board. Of course, the suggested list price of the Tech PC AT Desktop is a whole lot different from IBM's price—just \$1,399 for the standard configuration.

That base price includes an 80286-based system unit, 512K bytes of RAM, a 1.2-megabyte floppy disk drive, and a Western Digital hard and floppy disk controller. One unusual unique minor feature

	FACT FILE
Tech PC AT Desktop Tech Personal Computers 2131 S. Hathaway Santa Ana, CA 92705 (714) 754-1170 List Price: \$2,148 (tested configuration). In Short: A low-priced compatible that looks and acts like an IBM PC AT but is not built nearly as well. CIRCLE 888 ON READER SERVICE CARD	

is a toggle switch that protrudes from the back of the machine and lets you change the clock speed from 6 to 8 MHz. The base of the switch is embedded in a block of epoxy that holds two crystals. A wire connects the block to the system board. The whole thing looks as if it were fabricated in someone's basement, which is probably why IBM didn't include one in the AT.

Another more important aspect of the Tech PC AT Desktop's construction also leaves something to be desired. The metal

back of the chassis bends easily, and if you try to insert an expansion board into an outer slot, the system board bends, too. This weakness makes it difficult to seat boards properly in the slots and is potentially dangerous.

PERIPHERALS AND OPTIONS The keyboard, which comes from Thailand, is laid out like the older IBM PC AT keyboard. I liked the feel of the keyboard, which offers firm, constant resistance. The NumLock, ScrollLock, and CapsLock keys have green LEDs, but it's difficult to tell whether they are on or off under normal office lighting.

The review machine did not include a monitor, though the company sells one as an option. It did include the optional 30-megabyte hard disk drive, a 360K-byte floppy disk drive, monochrome/graphics adapter card, and a parallel/serial I/O card. This configuration plus a monochrome monitor sells for \$2,148. The hard disk, a Seagate 4038, tested at a fast 29-millisecond access time. At 8 MHz, the Tech PC AT Desktop's performance was comparable to that of other 8-MHz AT compatibles we tested.

The Tech PC AT Desktop performs respectably and is priced attractively enough to merit consideration. Be aware of the chassis's construction flaw, however, before you buy.

■ PC's Limited 286 12

The PC's Limited 286 12 feels more like an enhanced version of the IBM PC AT than a mere copy. Its most notable feature is its 12-MHz clock speed, which makes it twice as fast as the original IBM PC AT. The 286 12's speedy processor resides inside a streamlined system unit that's about 12 percent smaller than the AT's chassis. Inside, even the system board is downsized; it has fewer chips because it uses four VLSI chips.

The 286 12 competes on price as well as features. The base system, which includes 1 megabyte of RAM and a 1.2-megabyte floppy disk drive, costs only \$2,695. It's not the cheapest AT compatible on the market, but you get good value for your extra dollars.

The 286 12 is styled like an IBM AT,

The Tech PC AT Desktop is attractively priced—\$1,399 buys you an 80286-based system unit, a floppy disk drive, a keyboard, and a disk controller card. A toggle switch lets you switch the microprocessor's clock speed between 6 and 8 MHz.

■ AT COMPATIBLES

Processor speed is the telling factor when you compare the 6- and 8-MHz IBM PC ATs with 6-, 8-, 10-, and 12-MHz compatibles. If speed is your primary consideration, the PC's Limited 286 12 and ALR DART are the clear choices.

When you examine the results for the Disk Access benchmark test, keep in mind that several manufacturers offer several different hard disk models with their computers. Even when storage size remains constant, the test results will fluctuate to reflect different drive-speed ratings or tolerances. Processor speed does not affect hard disk access time; it's coincidental that the machines with faster clock speeds here have faster hard disks as well.

These results were normalized against the 6-MHz IBM PC AT, times for the 8-MHz IBM PC AT are included for comparison.

PC Labs Benchmark Tests: Low-Cost AT Compatibles

Performance Times

(Times given in seconds and decimal seconds)

●—Yes ○—No *Prices of individual components set by ALR dealers.

Relative Times
(Ratio: 6-MHz IBM PC AT = 100)

The 128K **NOP** benchmark test is designed to measure raw clock speed and memory access time while minimizing differences in microprocessors and the effect of memory caching. This test executes almost nothing but NOP ("No Operation") machine code instructions in a big 128K loop.

The **Floating-Point Calculation** benchmark test measures processor speed by looping through a series of floating-point calculations, including multiplication, division, exponentials and logarithmic and trigonometric functions. The benchmark program uses the floating-point library included with Microsoft C Compiler 3.0.

The **Conventional Memory** benchmark test allocates 256K bytes of conventional memory and treats it as a series of 64-byte records. Then, 16,384 random records are read into and written from this memory.

The **Disk Access** benchmark test from Core International Inc. measures the hard disk's seek time, or how fast the drive responds to the disk controller's instructions. The test program performs three measurements on the speed at which the drive head moves: track to adjacent track, track to adjacent track track, and the average of a series of randomly selected tracks.

Designed for a 640K environment, the **1-2-3 Routine** benchmark test assesses the computational speed and RAM-management capabilities of the machine by using a 1-2-3 macro that performs a series of both global and individual worksheet tasks. The macro copies and recalculates a 10-cell range 499 times; moves 1,000 cells; deletes 1,000 cells; and then systematically clears the spreadsheet.

FACT FILE

PC's Limited 286 12

PC's Limited
1611 Headway Circle, Bldg. 3
Austin, TX 78754
(512) 339-6800

List Price: \$5,156 (tested configuration).
In Short: A well-designed computer that offers super-high performance at an affordable price and lots of expansion options.

CIRCLE 89 ON READER SERVICE CARD

but it is not as wide (18.5 versus 21.1 inches). Take off the cover and you'll find that it has just one disk drive bay instead of the AT's two. The single bay can hold up to three half-height drives. A metal brace connects the front and back of the chassis along the left side of the computer, giving the unit a sturdy appearance. This brace has a drawback, though: if you want to install a card in the leftmost expansion slot, you must remove the brace first.

The system board is narrow, but, because of the reduced width of the chassis, a small part of the board is tucked under the power supply. Some AT compatibles have their batteries in that difficult-to-reach spot, but the battery for the 286 12's CMOS RAM is conveniently located at the front of the unit.

The system board holds 1 megabyte of RAM and contains four custom VLSI chips from Chips and Technologies. An 8-position DIP switch lets you choose color or monochrome, memory size, and other parameters. But the switch is located under the board that resides in the leftmost slot. If you use a board in this slot and you want to change a switch setting, you may find yourself removing the chassis brace and the board to do it. The system board has a total of eight expansion slots. Unlike in the IBM AT, the two 8-bit slots are grouped together at the left-hand side of the system board.

SWITCH-SELECTABLE SPEED The PC's Limited 286 12 runs at 12 and 6 MHz. Its processing speed is not due solely to the 24-MHz crystal on the system board. Its 100-nanosecond dynamic RAM chips and 8-MHz DMA, counter/timer, in-

terrupt controller, and clock generator chips also support speeds up to 16 MHz. Also, the 80286 chip used in the machine is a 12.5-MHz rated chip. You can change the speed from 12 MHz to 6 MHz through a keyboard control sequence, even while the computer is on.

The keyboard, which is manufactured by Maxi-Switch, has the old-AT-style layout and is very light compared to the IBM keyboard. A switch located on the bottom of the keyboard lets you interchange the Esc and Tilde keys to put the Esc key back in the upper-left-hand position if you like it there. The keys themselves present an initial resistance to the touch that I personally don't care for.

The review unit included a PC's Limited EGA board (called EGADs!) and enhanced color monitor. The board, which holds 256K bytes of video RAM, sells for \$269, and the monitor for \$479. The monitor has a fine display with just one notable flaw: characters in the rightmost column of the screen are condensed in width.

PC's Limited sells an optional Tandem 40-megabyte hard disk drive for \$819,

along with a utility that can divide the drive into two 20-megabyte drives called C and D. The PC Labs benchmark test rated the drive at a 26.58-millisecond access time, a performance that exceeds IBM specifications for the PC AT by more than 30 percent. A 60-megabyte, 1/4-inch tape drive for backup, which sells for \$795, is another useful option.

An interesting feature of the 286 12 is a front-panel display called SmartVu. A red LED bar graph indicates processor activity, and a green LED matrix linked to an internal diagnostics program can show you information such as the drive in use and the track number, or it can display a scrolling message. SmartVu can help you pinpoint the problem if you have trouble with your machine, and it can help the PC's Limited technical support staff as well. If you find the back-and-forth movement of the red distracting, you can turn the panel off from the setup menu.

Unlike other AT compatibles, the 286 12 stores its setup routine in ROM. If any hardware discrepancies arise during boot-up, the usual setup message appears. But

Its 12-MHz processor and 100-nanosecond dynamic RAM chips distinguish the PC's Limited 286 12 from the crowd, as does the SmartVu, a unique front display panel that can help you quickly pinpoint the problem if you have trouble with the machine.

DOING IT RIGHT!

A SIMPLE FORMULA FOR SUCCESS FROM THE IBM OF THE MAIL ORDER BUSINESS

When we founded PC Network, our goal was to create the IBM of our industry.

In three short years, we have grown to an annual sales volume of over \$75,000,000 employing over 200 people! We have served over 200,000 members. We ship over 7,000 orders per week.

We have become the world's largest PC Mail Order Firm.

We are often asked how we did it by the Editors of Computer and Business Magazines, Newspapers, Computer Manufacturers and Hedging Entrepreneurs.

Our answer is our philosophy.

Price computer products at what they're worth, not the most you can get. For us that became our wholesale +8% pricing applied to over 30,000 products, not just the "toobies."

The customer is the most important person in the universe!! Treat him or her well and your business will grow and prosper.

10 Day hardware returns, software rentals, a 24-hour bulletin board with over 20,000 FREE software programs yours for the picking, and numerous other benefits are only the tip of the iceberg in translating this philosophy into practice.

These commitments all cost money. A lot of money. But we firmly believe that for every dollar we spend on YOU our customer, we will receive many in return.

We are told we should be proud of our accomplishments, and we are. But we realize that they all come from working for you, giving you exceptional value and good service.

That means at PC Network, the Customer will always come first!

PC WORLD

"THE™ bottom line? The PC+ is a highly compatible clone worthy of consideration..."

Computer Dealer

"...the unit became the preferred computer in our office, which has several name brands as possible alternatives..."

HOW CAN THE PC COST SO LITTLE?

There's no reason why an IBM™ can't sell for \$500! today's costs of floppy drives, chips and all other components which make up the units are a fraction of their costs from a few years past. Advanced high volume production techniques combine with low material costs to make this low price possible.

Why then don't IBM™ PC's and many compatibles sell for \$500? It's simply a question of pricing. Do you go for the most you can get or charge what the product should reasonably bring?

THE™ doesn't have to worry about dropping the price on an existing product 50-80% and then wonder how to make ends meet when they do.

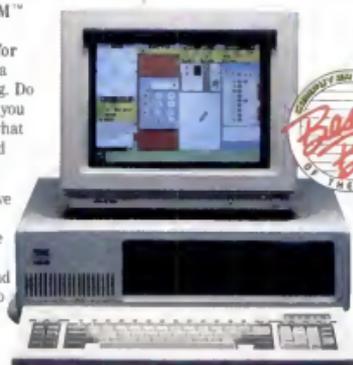

THE™ doesn't have to worry about selling \$800 typewriters in competition with \$500 computers.

You Can Buy **OR** the Same Money Buys

PC MAGAZINE ■ DECEMBER 9, 1986

■ AT COMPATIBLES

EDITOR'S CHOICE

For the ultimate balance between price and performance, none of the AT compatibles reviewed here is the perfect solution. Contenders reviewed in a previous issue offer better trade-offs (see "The Cheapest ATs Ever," PC Magazine, Volume 5 Number 18).

Depending on what features interest you most, however, you may find one of these three machines particularly appealing. The Tech PC AT Desktop has two factors going for it: it's very inexpensive and very close to the IBM original in appearance and performance. The PC's Limited 286 12 is the highest-priced computer here, but it's still less expensive than an IBM PC AT. And if time is a precious commodity for you, the 12-MHz speed will win you over. The most judicious choice here might be the ALR System 286, a price-conscious computer that offers reliability and attractive features.

when you press F1, the setup menu is immediately displayed on the screen. If there is a memory discrepancy, the program determines the correct amount of memory automatically. You can call the setup menu at any time from the keyboard by pressing Ctrl-Alt-Enter.

The PC's Limited 286 12 offers features and performance at an affordable price. (Don't be misled by the "tested configuration" price; PC's Limited provided a fully loaded unit for review, complete with the optional tape backup unit, EGA board, and EGA monitor.) A 10-MHz model, the 286 10, is available for \$2,295, and the 8-MHz PC's Limited 286 sells for a very reasonable \$1,495.

Although compatible with the IBM PC AT, the PC's Limited 286 12 is certainly not a clone. Thoughtful construction, intelligent design, and the astute marketing sense behind it should make this machine another PC's Limited success. ☐

First new 1/4 inch cartridge since 1971

Cartrex introduces the first, brand-new, 1/4-inch tape cartridge technology in over 15 years for some fundamental technical reasons. . .

...and today's tape drive need for 400% increase in tape speed, 500% increase in track density, 1000% increase in bit densities, and 3000% increase in bits/second, are just a few. Read on to get the complete story.

Why a new cartridge

With the significant increases in tape drive capacity, system reliability demands a tighter tolerance cartridge. Most tape drive users aren't aware that all of the tensioning, tolerance, and data reliability issues are virtually all a function of the tape cartridge.

When 3M announced its cartridge in 1971, it was designed for a low capacity tape drive with less than 3 megabytes—2.88 to be exact. The tape was low in density—1600 bits per inch with only 4 tracks and 300 feet of tape.

The tolerances required for the tape drives of the early 1970's were fine for then, but today's tape drives require much tighter tolerance. Today's tape cartridges must work with drives that have 9 or more tracks and bit densities as high as 12,000 bits per inch on 600 feet of tape. That means capacity increases of 2,000 percent packed into the same cartridge.

The reasons that yesterday's cartridge technology simply won't work properly in today's high capacity drives is inherent in the cartridge design. The three culprits that make cartridge tolerances so important are fluctuating tape tension, redeposit nodules, and instantaneous speed variations (or ISV).

Tape Tension

Tape tension at the read-write head is important because the tape drive's electronics expect data to arrive at a constant rate. Consistent tape tension is a function of the cartridge tensioning mechanism. The new Cartrex cartridge tensioning design, based

The new Cartrex 1/4-inch tape cartridge is the first new tape cartridge design in almost a decade and a half. Tape drive manufacturers now have a new cartridge technology which allows them to advance today's and tomorrow's drive performance.

on a mechanical differential between two stiff belts, provides very predictable results. The historic 3M design—used by 3M and DEI—uses an elastic belt coupled with drag friction at the rear pulley to create tension. The accompanying graph shows the significant improvement the Cartrex cartridge design offers over the conventional design.

Redeposit Nodules

Redeposit nodules are the insidious flakes of tape media that break off from the edges of the tape and get dragged to the edge of the read-write head. If the tension is low, or becomes low when the tape starts or reverses, the flakes slide past the edge, get smeared across the head, and reduce its ability to read data.

The free play in the two tape reels combined with the tape guides are the primary culprits in creating these redeposit nodules. As the tape enters the guide from the tape pack, the tape guide aligns the tape by balancing the tension at the edges of the tape. Uneven edge tension not only causes media to flake off causing redeposit nodules, but data is lost due to the "coining" or "scallop-ing" effect.

Cartrex eliminated the cause of the tape coining or scalloping with a barrel-shaped roller placed in front of the tape guide. The roller positions the tape and drops the edge tension to zero. By using this roller, the possibility of media flaking off and creating redeposit nodules is virtually eliminated.

Instantaneous Speed Variation (ISV)

Instantaneous speed variation is exactly what it sounds like—small, instantaneous changes in tape speed as it crosses the tape head. At slow tape speeds and low bit densities—like the 1971 standard of 30 inches per second and 1,600 bits per inch—ISV wasn't as big a problem. At that time, the bits were crossing the head at 48,000 bits per second.

Today, however, the story has changed. Ninety inches per second and 8,000 bits per inch mean that 720,000 bits cross the head every second. A 1,500% increase. As you

may have guessed, 1971 speed fluctuations in the 48,000 bits per second range made reading data difficult for tape drive electronics. But today, when the electronics have to guess whether or not the bit rate of 720,000 bits per second is accurate, the electronics can become overwhelmed.

The Cartrex tensioning mechanism relieves the overload placed on the electronics with respect to ISV. The longitudinally stiff belts ensure tension at all times. The stiff belt overpowers variations that exist with the 3M elastic belt cartridges. The barrel roller guides, in addition to reducing the edge pressure to zero, tend to dampen out any residual ISV effects.

High speed tape seldom enters tape guides parallel to the top and bottom, even with improvements to the tape reel hub design. The edge pressures which result create "scallop-ing" or "coining" on the tape. The effect is data loss due to head-to-tape separation, flaking media that smears across the head, and "red-deposit" nodules that create hard errors.

Never a Single Issue

Your tape drive seldom has the luxury of dealing with an isolated problem. It's usually a combination of ISV, redeposit nodules, and tension problems all together. Now you understand why Cartrex developed a modern cartridge alternative.

Where to get it

Not only has Cartrex improved on the industry's 15 year old technology, they have done it for a competitive price.

Now you can have peace of mind when you back up your hard disk on today's sophisticated tape drives.

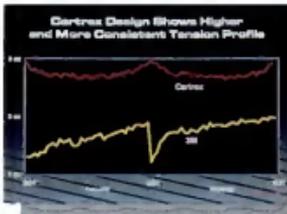

And you can have it fast. Simply phone and give Cartrex your purchase order number or your credit card number and they will send your cartridges by return mail.

(619) 485-6603 Ext. 2000

Dealer Inquiries Invited.

CARTREX

The Cartrex cartridge provides predictable and stable tension. Compare it to the tension variation of the conventional cartridge design. The consistent Cartrex tension virtually eliminates data errors and data loss from head-to-tape separation and redeposit nodules that can occur with fluctuating, low-to-high tension performance.

PORTABLES: MOBILE ACCESS

Tech PC Portable Computers come in four different base models to match your computing needs. Our entry level Tech PC/XT portable computer is designed to provide a non-obstructive profile, and has a capacity to hold two thirty megabyte hard disks, a high resolution monochrome monitor with a Hercules compatible graphics card to drive it with

800 by 400 lines resolution, and never before heard of 6 expansion slots in a portable computer. If 4.77 MHz of Intel 8088 power isn't fast enough, try our Turbo 4.77 to 8 MHz 8088-2 or optional NEC V-2 microprocessor based portable machine. Designed to increase speed up to 170 percent of a standard PC/XT, this turbo gives you the edge.

Tech Personal Computer Systems are designed and manufactured by Tech Personal Computers . . . The leader in quality, performance and state of the art computer system engineering. . . each of our portable, desktop, multiuser, and minicomputer systems are unparalleled in the

industry for quality construction, dependable operation, complete software compatibility, and an unbeatable combination of product satisfaction guarantees, long warranty periods, and comprehensive third party maintenance. At Tech PC we're out to

capture your micro-computer business. No one matches our diverse line of high performance products, or our comprehensive system of support, warranty, and third party maintenance service options.

The Tech PC/AT and Tech Turbo PC/AT portable units are state of the art in portable performance. The 80286 microprocessor based units can be fitted with up to 240 megabytes of

high speed voice coil hard disk technology, and with the Turbo AT's 10 MHz math co-processor socket and 10 MHz 80286 microprocessor the unit can manipulate large spreadsheets

with unparalleled performance.

If only there were more of you.

Wouldn't it be great if you could multiply yourself? Do an honest day's work before lunch?

Well, you can. With Microsoft® Windows.

Windows lets you work with multiple applications at the same time — more programs than your PC's memory can normally hold. Neatly sidestepping the 640K limit.

You can switch from, say, 1-2-3® to dBase II® or to Microsoft Word or to Microsoft Chart in a couple of keystrokes. Leave one program and jump to another.

And you can select and edit information from several different programs. Then quickly combine and print it all on a single piece of paper.

We've only just begun.

Windows is a graphic extension of MS-DOS® which gives you a more intuitive way to work. Your bridge to a new generation of applications which can be easily integrated. And which take

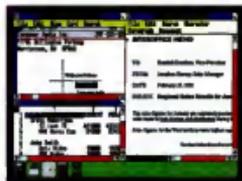

advantage of Windows' common interface for commands, options, and data exchange.

In the Windows world, you move information freely.

Do more work, more kinds of work, and do it faster.

A startling value.

and you get a whole desktop full of applications to help you manage your day to day business.

In addition, you get Windows Write, a graphically-based word processing program. And Windows Paint, a simple, easy to use drawing program.

Not bad for \$99.

Find out how productive you can be with a Windows office. Get all of yourselves down to your Microsoft dealer.

And take a really good look into Windows.

Microsoft Windows

SUPERCHARGING XT HARD DISK PERFORMANCE

Mention PC performance, and hard-core power users will spin yarns about souping up their 80286-based desktop wonders with clock crystals that operate in the FM band, disks so fast they scorch data, and special tricks confided to them by one of the aboriginal witch doctors who developed the more esoteric modules of DOS. Somehow the 3 million or so 8088-based IBM PCs and XTs and the untold millions of compatibles are forgotten when performance is the issue.

You can, however, improve your 8088-based system's performance and your own productivity in several ways. Software developers have created caching programs to speed up hard disks (see "Getting the Most Out of Your Hard Disk," *PC Magazine*, Volume 5 Number 5), and the many new accelerator boards

let you boost processor performance, although sometimes they slow down disk access (see "Accelerator Boards: Power for a Price," *PC Magazine*, Volume 5 Number 15). But hidden from the headlines and microprocessor horse races, several hardware developers have created modest miracles that promise to boost the speed, capacity, and usefulness of ordinary PCs and XTs by quickening the pace at which data flows both to and from their hard disk storage systems.

Advances have been made on several fronts. The hard disks themselves are being so honed and refined that the fastest of today's hard disk drives can retrieve a random byte of data from disk five times faster than the drive that came with the original XT. And disk controllers—the electronics that actually direct the movements of the hard disk head and turn mag-

If you've worked on an AT, your XT's hard disk may now seem unbearably slow. You can speed it up and increase storage with a new hard disk or controller.

■ XT HARD DISKS

netic pulses into useful data—can now boast on-board buffering and new data-coding schemes. Even the arrangement of the storage units on the disk can now be modified to improve data access.

It sounds too good to be true. Can you really get AT performance from an XT system, as one disk maker claims? To find out, PC Labs tested and compared each of these disk innovations, individually and in combination.

The results were surprising. The XT standard for hard disk performance, which had astounded us only a few years ago, proved to be a modest one, indeed. The various technical tours-de-force we tried all improved disk performance to some degree. And when these hardware innovations were optimally combined and linked with DOS, we were able to speed up data access and transfer significantly.

Some of our long-held beliefs—for instance, that the 8088 microprocessor can't benefit from faster disk access—fell by the wayside. And others—like the importance of providing adequate sector buffering—were reinforced.

No mere change in its hard disk subsystem will put the humble 8088-based XT on a par with its muscular sibling, the AT. But paying some attention to your hard disk can mean the end of a lot of waiting for the red hard disk drive light to go out and the beginning of better performance in disk-intensive applications.

WEAVING SECTORS Sysgen and Tallgrass Technologies Corp. are two companies that effectively have been working magic on the format used for storing data on disk by doing away with sector interleaving.

In the official IBM scheme of things, disk sectors are not read one after another in the order that they are found on the disk. Instead, after one sector is written, five physical sectors (those on the disk) on the track are skipped before the next sector is written. The hard disk controller in the PC sorts out the shuffled sectors and sends them to DOS as logical sectors that are written and read as smoothly as if they were adjacent.

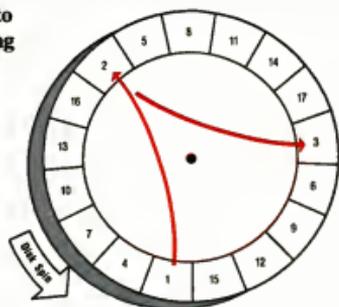

Although DOS is isolated from this sector interleaving, its physical consequences unfortunately result in a speed penalty. For

Two Approaches to Sector Interleaving

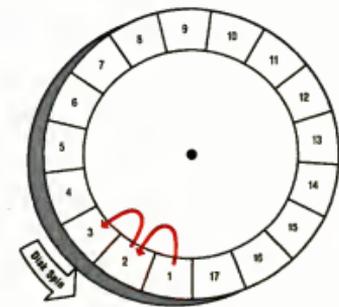

6-to-1 Interleave

With a 6-to-1 interleave (the interleave factor that IBM adopted for the PC-XT), the read/write head must skip five sectors between consecutive reads or writes, slowing down data I/O.

1-to-1 Interleave

With a 1-to-1 interleave, sectors are adjacent on the disk and the read/write head can move between them smoothly and swiftly. The Sysgen Matched Pair and TG-5525i speed up data I/O by eliminating sector interleaving in this way.

every six sectors that the disk moves, only one sector is written or read. This means that writing or reading a whole track, ordinarily made up of 17 sectors, requires five spins of the disk. Because each complete turn of the disk requires $1/60$ of a second (the spin speed of hard disks is about 3,600 revolutions per minute), gleaming a full track takes 8.33 milliseconds, or about $1/2$ of a second. (Most people believe that IBM originally adopted the interleave factor of 6 to 1 chiefly to slow down the speed at which data comes from disk to match the rate at which the 8088 microprocessor could absorb it.)

Both Sysgen and Tallgrass eliminate sector interleaving, though the sector arrangement is often described as having an interleave of 1 to 1 or, simply, 1. In the Sysgen Matched Pair system (the matched

pair here is an internal hard disk and controller board), each logical sector lies adjacent to the next one to be read, and all the logical sectors on a track are contiguous. The Tallgrass TG-5525i, an internal hard disk, doesn't even slice the track into sectors. It records the whole track as a single block of data, and the Tallgrass disk controller then divides it into sector-size chunks electronically so that DOS doesn't know the difference. Both the Sysgen and the Tallgrass systems write or read a whole track in a single spin of the disk—a theoretical speed advantage of 500 percent over an ordinary XT disk.

The motivation behind the whole-track-at-a-time trick is different for each system. Sysgen adopted the 1-to-1 interleave purely to improve its hard disk's performance. Tallgrass uses it because it also better

FROM 0 TO 30 MEGABYTES IN RECORD TIME.

You better fasten your seatbelt. Because Mountain has done it again. The company that brought you the first IBM® AT tape backup, the first AT hard disk, and the first 20MB DriveCard™ is now shipping another industry standard—the first 30MB DriveCard.

50% MORE DATA AT PEAK SPEED.

DriveCard gives you the highest capacity and fastest data transfer

rate (75Mbits/sec.) in one highly reliable hard disk on a card. Without sacrificing one of your existing floppy disks. It's ideal for "power users" and serious number crunchers who require additional hard disk storage for large database and multi-user applications.

DriveCard fits neatly inside IBM, AT&T,* COMPAQ® or most compatible computers. It provides the same software compatibility as the latest factory original built-in drives. And it features improved error correction for outstanding data integrity.

What's more, DriveCard is 100% compatible with DOS 2.1 and higher, PC IX, UNIX* and XENIX*
And comes ready to

support most popular local area networks. Which gives you the flexibility to meet future needs.

As the industry's fastest growing supplier of innovative, high-performance storage upgrades, Mountain backs each DriveCard with a 12-month limited warranty featuring "Ready Replacement" within the first six months. And a 10-year track record for responsive support.

■ XT HARD DISKS

matches its unique (in the PC hard disk world) disk data structure.

INTERLEAVING IMPEDIMENTS

The sector interleave of a disk is determined at the time the low-level format is applied to the disk. Low-level formatting (which should not be confused with the DOS formatting process that merely imposes a logical structure on an already formatted disk) writes sector identification and timing information on a blank disk. The actual interleave factor that's used is virtually invisible to you and your software because your hard disk controller isolates the rest of the computer system from on-disk data-structure concerns.

But you are likely to notice a difference in the speed of data transfer. In theory, a lower interleave is supposed to give higher performance; therefore a 1-to-1 interleave should be the fastest-performing sector arrangement for a hard disk.

Reality is somewhat different. A hard disk's read/write head cannot move instantly between adjacent tracks or cylinders of the disk. The track-to-track access time of most hard disks is in the vicinity of 5 to 10 milliseconds—about the time it takes the disk to spin halfway around. Thus, with straight 1-to-1 interleaving, when the read/write head finishes with one track, it has to wait for the next revolution before it can start writing or reading the next track.

The Sysgen Matched Pair system works around this problem by including a full-track buffer in its controller circuitry. Whenever a request is made to read a sector from the Sysgen hard disk, the controller automatically reads the whole track which contains that sector and stores the full track of data in its buffer memory while it is sending the data from the requested sector to its host computer. In most applications, where one data cluster—usually four sectors—is read at a time (with a pause for processing before going on to the next cluster), reading the full track imposes no performance penalty. Performance does suffer, however, when you're randomly reading or writing short records.

Computers based on the 8088 microprocessor supposedly are not fast enough to absorb all the data in a full track as it is

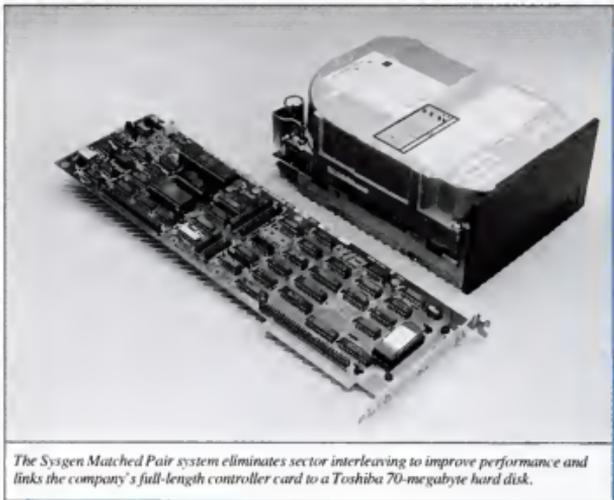

■ **The TG-5525i hard disk doesn't have a 1-to-1 interleave factor, but it acts as if it does.**

being read from the disk, so the disk is effectively idle while the track information is being transferred from buffer to host. During these idle periods, the Sysgen controller keeps monitoring sector requests. When data is needed from a sector written on another track, it moves the read/write head to that track while data is still being dumped from the buffer. By the time the host computer has digested everything from the first track, the Sysgen disk is reading the next, pumping out information continually.

To improve performance still further, the Sysgen Matched Pair links the company's full-length controller card to a Toshiba 70-megabyte hard disk, which fea-

tures an average access time of about 30 milliseconds (a 40-megabyte model is also available). The controller, which uses the standard 5-MHz ST506 interface and MFM (modified frequency modulation) recording, has a built-in low-level format program that will accommodate a number of other drives. (MFM is the recording system used on most currently available hard disks; see sidebar "Faster, Denser Disks with RLL.") Sysgen also supplies software to partition the large drive into several volumes, each of which acts like a separate logical disk drive. The system is compatible with most XT-like machines that have adequate power—at least 130 watts.

DATA GROUPS The Tallgrass TG-5525i hard disk doesn't actually have a 1-to-1 interleave factor, but it acts as if it does, reading and writing full tracks of data in sequence. The novel Tallgrass arrangement, which relies on group-coded recording (GCR), was a design choice based primarily on the desire to operate a hard disk and a tape backup unit with the same controller electronics. Besides achieving tape and disk compatibility

The Sysgen Matched Pair system eliminates sector interleaving to improve performance and links the company's full-length controller card to a Toshiba 70-megabyte hard disk.

Life's Tough Decisions.

THE CHOICES.

Remember when your biggest problem was no storage space in your wagon? No room for your boats, trains, cars, and planes. Your choice was to either get rid of some toys or get a bigger wagon.

Now your wagon has turned into an IBM PC-XT. Your boats, trains, and cars are now database, spreadsheet, and word processing files. But your choice for more storage is still about the same: either get rid of some "toys" or get a bigger "wagon."

GETTING A BIGGER WAGON.

Since every bit counts, you can now upgrade your computer with a CORE 43 MB half height drive and still give yourself room to grow. IBM's standard XT contains only a 10 or 20 MB full height drive, which filled up faster than you thought it would. Your PC-XT may even accommodate 2 CORE drives. That's 86 MB and a floppy all inside the box.

IBM PC-XT and IBM PC-AT are registered trademarks of International Business Machines, Inc.
See us at Comdex, Booth W12

A SIMPLE TRANSITION.

Installation is easy. Everything is supplied for you to install in less than 30 minutes. Have a drive already? Simply remove the old and slide in the new.

SHIFT INTO HIGH GEAR.

Our half height drives are the fastest in the world. With an average access time of less than 26 ms, these drives are 4-5 times faster than the standard XT (and more than 30% faster than an IBM PC-AT). Load, save, sort, and retrieve data in record time. Plus, they're one half the size! Ideal for networks and file servers, and they support both DOS and XENIX.

 **CORE**

■ XT HARD DISKS

The Tallgrass TG-5525i is an easily installed internal hard disk that increases capacity by storing a whole track as a single long block of information.

along with the economy of using a single controller for two systems, Tallgrass gains greater disk storage capacity by storing a whole track as a single long block of information, with no sector divisions. Since the elimination of sectoring saves the disk space normally reserved for sector identification information, GCR further increases the density of data on the disk. Thus the 20-megabyte Control Data Corp. hard disk in the Tallgrass TG-5525i tested actually held 26 megabytes.

In order to maintain compatibility with DOS, the Tallgrass controller—a full-length expansion card—acts as an interpreter, breaking the big block into DOS-sized sector-like chunks and sending the appropriate chunk to the system when it is needed.

In truth, we found that the standard XT drive outperformed the Tallgrass in two out of three tests. The TG-5525i's principal liability is the system's absolute need to read and sort through a whole track even when only a single sector of data is requested. This penalty is especially great when DOS randomly accesses small records, as it often does. The Tallgrass TG-5525i has a greater speed potential when

■ A new data coding scheme called run length limited (RLL) promises to improve disk I/O and increase disk capacity—by as much as 50 percent.

combined with non-DOS operating systems that typically use longer records.

The TG-5525i is as easy to install as any other disk system and can replace the hard disk in an XT or any PC-compatible computer that has at least 130 watts of power. Tallgrass includes its excellent *BackTrack* program, which automatically makes tape or disk backups while you work.

RUN LENGTH LIMITED A new data coding scheme called run length limited (RLL) also promises to improve disk I/O

and increase disk capacity—by as much as 50 percent.

Because RLL, like GCR, is simply a scheme for rearranging bit patterns of encoded information on disk, its speed and capacity increases are won without any change to the hard disk itself. A disk that nominally is able to store 20 megabytes using the older MFM coding can effectively hold 30 megabytes using the RLL coding scheme.

The RLL coding scheme is new only to personal computers. Originally developed by IBM for mainframe-style mass-storage systems, RLL has been a well-established technology in larger computer systems for a number of years. However, the technology has not been widely used in personal computers because of difficulties encountered in implementing it with earlier controller hardware. Compared to MFM, RLL requires circuitry that's inherently more complex and, at least initially, more expensive.

The first company to make RLL work with PCs was Sunol Systems, which in 1984 introduced a network hard disk with a massive proprietary RLL controller card that was several times larger than an ordinary PC expansion card. Other companies quickly followed suit, compressing the RLL circuitry into custom VLSI (very large scale integration) chips. When Plus Development Corp. introduced its HardCard last year, RLL was the key to packing a full 10 megabytes inside the miniaturized expansion-slot-sized hard disk. However, the HardCard used a special interface that is not compatible with most of the hard disks on the market.

COMPETING CARDS Earlier this year, two prominent disk controller manufacturers, Adaptec and Scientific Micro Systems, introduced RLL controllers for the standard ST506 disk interface. Nearly every other disk controller maker is working on or has announced a similar line of RLL products.

Like the standard IBM hard disk controller in the XT, the Adaptec ACB-2070A RLL controller (see *First Looks*, *PC Magazine*, Volume 5 Number 16) requires one full expansion slot and is able to control two hard disks. A low-level formatting program built into the on-board ROM of

FasTrak™

Backup made easy for the forward moving company

"Performance is excellent... it has speed and excellent diagnostics... one of the best..."
PC Tech Journal

"A smooth operator... in making file-by-file backups... (it) hardly ever stopped to catch its breath..."
PC Magazine

Sigma Designs introduces FasTrak, a revolutionary concept: powerful PC backup in a compact, portable design.

FasTrak delivers the power
Speed. At 5 MB/minute there's always time to FasTrak.

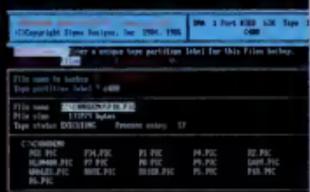

Performance. FasTrak backs up and restores data, reliably, consistently. With both image and file-by-file modes, and menu and command driven operation, FasTrak has all the flexibility you need.

Simplicity. Our on-line tutorial is acknowledged as the best in the business. And as to ease-of-use, ask any dealer!

Big things do come in small packages
FasTrak comes in two versions, so you can backup either 27 MB or 60 MB of data per tape. And since connecting it is so simple, FasTrak moves easily from PC to PC, or XT or AT.

All in the family
FasTrak carries on Sigma Designs' tradition of product excellence. For backup, storage, expansion, or all three, Sigma Designs the systems.

FasTrak. To keep you moving forward.
Call (408) 943-9480 for the Sigma Designs dealer nearest you.

FASTER, DENSER DISKS WITH RLL

Squeezing more data into a given amount of disk space might seem like magic, but with run-length-limited (RLL) technology, it's simply a matter of mathematics.

Information is stored on hard disks in the form of magnetic flux changes—reversals of the magnetic field in the small particles of oxide or thin-film medium that covers the platter of the hard disk.

The electronic circuitry of the disk controller translates the bit patterns of the data sent from the host computer into the new patterns that will become the flux changes that are written on the disk. In the most rudimentary form, for instance, each data bit might be translated into a single flux change.

The characteristics of the magnetic medium, the speed at which the disk spins, and the design of the disk read/write head together determine the minimum and maximum spacing of the flux changes on the disk. If the flux changes are too close together, the read/write head might not be able to distinguish between them; too far apart, and they cannot be reliably detected.

In one of the earliest magnetic digital recording schemes—called frequency modulation, or FM recording—the disk controller added an extra bit, called a clock bit, ahead of each data bit written on the disk. When read back, each clock bit signaled to the controller that a data bit would follow. The presence of a flux

change between two clock bits indicated a digital 1, and no flux change between clocks indicated a digital 0. The possible spacing of flux changes was thus confined to a very narrow range of two values, but two flux changes were needed to record each bit of data.

Modified frequency modulation recording (MFM), the system used in most contemporary PC disks, does not use clock bits. It stores digital 1s as a flux transition and 0s as the lack of a transition within a given period. To prevent flux reversals from occurring too far apart, an extra flux reversal is added between consecutive 0s. Because no flux reversals are needed to represent clock bits here, MFM packs information twice as densely on disk. Hence MFM is sometimes called double-density storage.

RLL is much more complex. It translates the incoming binary code into its own, different digital code of 1s and 0s, which it sends to the disk. This translation occurs not at the bit level but one step higher: each incoming byte is assigned a new code pattern 16 bits long.

Only a fraction of the available 16-bit patterns—the ones that are easiest to record magnetically—are used. The principal requirement is that there must be from two to seven 0s between each 1 (hence, the formal name of the system used by both Adaptec and Scientific Micro Systems—2,7 RLL). The remaining 16-bit code patterns are made illegal and never

appear in the final output to the disk drive.

Although the coding scheme requires twice as many bits to encode its data, it fits better within the limits of the recording medium and allows data bits to be coded to flux changes three times as dense. Only the 1s cause flux changes, and they are always spaced at least three binary places apart. Hence, although there are twice as many code bits, they can be three times closer together and still keep the same spacing of flux changes as would be produced by MFM. The gain in storage density over MFM is thus 50 percent.

In both the Adaptec and Scientific Micro Systems arrangements, the added information is packaged into additional disk sectors on each track. Instead of the DOS standard of 17 sectors per track, both controllers create 25. And because the disk spins at the same speed no matter what data code system is being used, the 25 sectors of RLL are transferred to the controller in the same amount of time that MFM takes to move 17.

The penalty that RLL's greater recording density imposes is that it requires a much more complex controller and better-quality disk drives capable of handling higher data rates. Not all hard disk drives can reliably transfer information at the RLL rate—7.5 MHz—although more and more such drives are becoming available.—**Winn L. Rosch**

the ACB-2070A allows you to set both the hard disk interleave (which may be anywhere between 3 to 1 and 16 to 1) and the seek-step pulse rate, which controls the speed of read/write head movement.

The Scientific Micro Systems OMTI 5527 disk controller is part of the company's OMTI line of highly integrated PC-compatible disk controllers. The OMTI 5527 card is remarkable for its miniaturization: it's just 5 inches long and fits easily into an XT short slot. All of the necessary logic for RLL recording is contained in several custom VLSI chips on the card.

■ The OMTI 5527 card is remarkable for its miniaturization: it's 5 inches long and fits easily into an XT short slot.

Also, like most of the new hard disk controllers, the OMTI 5527 will operate two hard disks.

Probably the best part of the 5527 is the OMTI software available from SMS. It allows ordinary human beings—as distinguished from assembly language programmers—to match nearly any disk drive to the XT. The disk includes several OMTI-disk programs for setting up multiple DOS partitions and drivers for dividing large disks into a number of virtual volumes.

The OMTI disk software will low-level-format nearly any hard disk drive. By writ-

A Great Christmas Bonus from Radio Shack

The New Tandy 1000 EX

Complete with our Color Monitor

...at no extra charge.

Save \$799
299⁹⁵

Get real PC power in an affordable home computer

There's no reason to settle for a "game" computer this Christmas. Now you can get a Tandy 1000 EX for the price of a game machine. Best of all, you'll get a CM-5 Color Monitor (25-1023) as our gift to you when you buy the Tandy 1000 EX.

The Tandy 1000 EX (25-1050) is a true PC-compatible computer, ready to use the MS-DOS® based software you bring home from the office, as well as software designed for the home or classroom. Inside the sleek one-piece design there's a 5 1/4" disk drive, 256K RAM and a three-voice sound circuit with a built-in speaker and a headphone jack for private listening.

The CM-5 monitor features a 13" screen with 80 x 25 text and 320 x 200 color graphics. Plug it in and you're ready to start computing... because the Tandy 1000 EX even includes software!

Start computing on Christmas morning

Every Tandy 1000 EX comes with our graphics-oriented Personal DeskMate™ productivity software. Choose from valuable applications like TEXT word processing, WORKSHEET spreadsheet analysis and FILER electronic filing. PAINT, a graphic picture editor, lets you create colorful drawings and designs. There's also a CALENDAR and TELECOM communications*. Personal DeskMate even includes

great special functions like a PHONE DIRECTORY, CALCULATOR, and NOTE PAD.

And for professionals...

The CM-5 color monitor bonus is also available when you buy the 2-disk, 384K Tandy 1000 SX—the perfect computer for small business and professionals—only \$1199. Save \$100 on our DMP-130 dot matrix printer, too. At only \$249.95, it's the perfect complement to your computer.

Come see what's in store for you this Christmas at Radio Shack.

Radio Shack®
The Technology Store™

Upgrade to EGA Without An EGA Monitor

The ATI EGA Wonder goes far beyond software compatibility. It is the result of intensive development by one of the most revolutionary technology companies today — ATI Technologies Inc.

The ATI EGA Wonder is not just better technology. It is the solution for upgrading to EGA without an EGA monitor.

Only the ATI EGA Wonder displays EGA, CGA, MDA, Hercules and 132 column software on an Enhanced Graphics Monitor, an RGB Color/Graphics Monitor, a TTL Monochrome Monitor, a Composite Monitor, or the internal monitor of the PC Portable.

Only the ATI EGA Wonder provides upward compatibility to EGA and downward compatibility to CGA, MDA, and Hercules on your present monitor — EGA, RGB, TTL, Composite or PC Portable.

At ATI we have developed a better graphics card for you. Call us today at (416) 477-8804 for more information.

Technology you can Trust.

This Size Fits All.

In today's rapid-paced world in which the movers and shakers prevail, it's nice to have a computer that can move with you. And that's why Logisoft offers a full line of personal laptop computers that are powerful, yet portable. Compact, and convenient.

Take the Toshiba T1100 PLUS, for example. Eleven pounds of power that includes: 640K RAM, two built-in 720K 3.5" disk drives, a high-resolution 80 character x 25 line LCD display (also built in), an 80C86 microprocessor, and runs on rechargeable batteries or an AC adapter (also included). The Toshiba has the ability to handle a host of peripherals, and is fully IBM-compatible. So that it fits any business need, as well as it fits any businessman's lap. Best of all, you can order the Toshiba T1100 PLUS today and get it tomorrow at a great price, from Logisoft.

Logisoft is the world's leading distributor of name-brand computer hardware and software products. We offer free installation on most systems, as well as on-site service contracts.

Our custom leasing programs are designed to make your purchase fit your budget. And through our offices in Amsterdam, we can easily handle your overseas corporate needs.

So, when you're moving up the ladder, take the computer that's fit for the top rung, yet fits in a briefcase...

the Toshiba T1100 PLUS from Logisoft.

■ XT HARD DISKS

The Adaptec ACB-2070A RLL controller improves performance by letting you set the hard disk interleave and the seek-step pulse rate. You can experiment to find the best combination.

The OMTI software from Scientific Micro Systems allows you to match nearly any disk drive to the SMS 5527 controller. The disk includes programs to set up multiple DOS partitions.

ing certain drive identification information on a disk track during this process, it enables the OMTI 5527 controller to recognize nearly any arrangement of disk platters, heads, and other hardware parameters. In addition, it allows you to

set any sector interleave on the hard disk between 1 to 1 and 16 to 1.

Currently, the price premium for either of these RLL controllers amounts to only a few dollars over the cost of an ordinary MFM controller card. They are already be-

coming popular with suppliers of disk subsystems because they allow a 20-megabyte system to hold 30 megabytes with only a tiny increase in cost.

Although at \$169 an RLL controller might seem like a quick and easy way to increase the storage capacity of your XT and, at the same time, speed up its performance, you cannot just take your old controller out and slide a new one in. RLL makes more-stringent quality demands on

■ The standard drives that IBM installs in PC-XTs just can't handle RLL reliably.

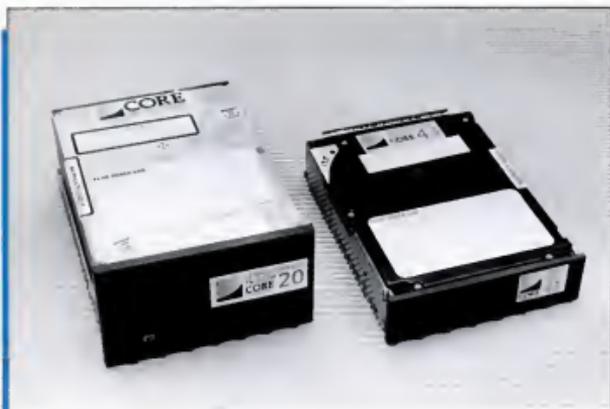

disk drives than do older encoding methods like MFM. The standard drives that IBM installs in PC-XTs just can't handle RLL reliably. Taking advantage of RLL thus requires a radical change: replacing the XT hard disk entirely, or adding one to a floppy-based system.

DATA ACCESS If your primary aim is to get the most performance possible from your personal computer, in addition to looking for a hard disk drive that is capable of handling RLL recording, you should really hold out for a drive with a better average access time because it can move its head between random tracks on the disk much faster.

Core International has probably done more than any other company to draw attention to the data access speeds of hard disks. Its focus has been average access time, a measure of how quickly any record can be found at random on the disk. While all the publicity has focused on increasing AT hard disk speeds, Core has also introduced XT-compatible disks with similar, lightninglike access speeds. The Core International XT20 and XT43 (with capacities of 20 and 43 megabytes, respectively) are two representatives of the company's ATplus line, which extends to 72-megabyte drives.

The primary limit on access time is the

■ XT HARD DISKS

Core International's XT20 (left) and XT43 (right) are XT-compatible disks that have outstanding access speeds and 20- and 43-megabyte capacities, respectively.

disk drive itself and is specifically related to two variables: the technology used in the mechanism that moves the head across the surface of the hard disk platters and the physical construction of the head and related mechanism.

The average access time of the hard disk supplied with 8088-based XT's measures about 85 milliseconds. Some of the drives that came with older XT's are even slower. In contrast, the latest Core drives for the XT turn in average access times of about 20 milliseconds. Installing one in an XT should appreciably improve its data retrieval speed, as well as increase mass storage capacity.

With drives that are not compatible with standard XT-style hard disk controllers, Core also supplies a controller. (The old IBM controller can only handle drives up to 10 megabytes; the newer IBM controller could handle the Core XT20 but not the XT43.) The Core controller can further improve performance because it uses short

TGA mode (640 x 400)

Buy one.
Get two free.

EGA mode (640 x 350)

Improved CGA text mode

Sometimes life gives you less than you bargained for. Taxan would like to even that out a bit by giving you more than you'd expect—our Multi-Resolution System.[™] Our display products not only give you EGA software compatibility, but also switch modes to CGA or TGA (640x400). This eliminates the hassles of swapping adapter cards or resetting internal switches. And, at the same time, it gives you three modes for the price of one.

Because of its ability to automatically switch modes, the Taxan Gold Card[™] graphics adapter allows you to add new programs, with different display standards, to your software library without the worry of compatibility.

The Taxan Gold Card is also equipped with a built-in serial port. Making it easier to use mouse-driven software, like Windows, without buying a separate board or giving up valuable expansion slots in your PC.

Best of all, the Taxan Gold Card is designed to complement our high performance RGB monitors. Like the new large-screen model 840 or the improved models 635 and 650. The higher-than-industry standard horizontal scan rate of 25 KHz, and a doubled line count of 640x400 combine to give you sharp, clean text. Bright, clear colors. And crisp chart titles. All without annoying flicker.

Taxan's Multi-Resolution System is fully compatible with popular IBM and IBM-compatible PCs, including the AT & T 6300 and 6300 Plus.

Give us a call at your regional Taxan office for performance data on the Multi-Resolution product family. And remember that the best things in life are free.

Graphics Mode	
TGA	Ultra-high resolution (640x400)
EGA	IBM standard (640x350)
CGA	Double-scanned, high-quality image

RGB Monitor Applications	
Model 840	5-inch, large screen CAD/CAM graphics, 0.39 mm dot pitch
Model 635	Superior text display and business graphics
Model 650	Personal CAD/CAM graphics, 0.28 mm dot pitch

■ XT HARD DISKS

seek-step rates that the Core drives can take advantage of, while standard IBM drives cannot.

REAL-WORLD DIFFERENCES A prevalent belief in the PC community is that the speed handicaps were built into the XT hard disk system because the XT itself is not able to handle disk data any faster than it does in its standard configuration. Any improvement in hard disk performance in an 8088-based system would be negated by the laggardly microprocessor's inherently limited data-processing abilities.

Contrary to this notion, new drive and controller technology can improve real-world performance substantially—although perhaps not as dramatically as some of the manufacturers claim.

PC Labs tested four influences on XT disk performance: sector interleave, data encoding method (in particular, modified frequency modulation versus run length limited), full-track buffering, and average access time. We based our comparisons on special benchmark test programs, written in assembler, that sequentially wrote and read one very large file and randomly read the records of that file.

PC MAGAZINE EDITOR'S CHOICE

The degree to which you can improve your XT's hard-disk performance depends on how much money and time you're willing to invest. For a straightforward, time-efficient approach, we'd choose the Sysgen Matched Pair for its high level of all-around performance on the PC Labs tests and its relatively easy installation.

We're to take the time to tinker, we'd combine a high-speed Core drive with the Scientific Micro Systems OMTI 5527 disk controller and set the interleave as low as we felt safe. If we didn't want to experiment and find the number of DOS buffers that gives the best performance with our software, we'd set them at 20 and be content with knowing that our disk system was running up to three times faster than the one in an ordinary XT.

SPEED IMPROVEMENT Reducing the sector interleave will speed disk performance even on a personal computer as processor-bound as an IBM PC-XT. We measured the effects of different sector interleave factors using the SMS OMTI 5527 disk controller and formatting disks with OMTI disk software. On the Core XT20, we achieved across-the-board speed improvements of 10 to 40 percent by optimizing the sector interleave and the specified number of buffers. Reducing the interleave from the IBM XT standard of 6 to 1 to the often-recommended 3-to-1 ratio gave the biggest performance boost. We expected to achieve the optimal results at a 2-to-1 interleave, but the fastest performance was measured at a 1-to-1 interleave even without full-track buffering.

BUFFER POWER Sector buffering proved to be a much larger factor in determining disk data-handling performance. With every disk drive tested, increasing the number of buffers specified in the test system's CONFIG.SYS file from the DOS default value of 2 to 3 improved performance dramatically. Overall performance increased marginally through 20 buffers.

BUFFERING HARD DISK DATA

One of the most valuable inferences you can draw from PC Labs' extensive testing of new hard disk technology concerns the importance of taking advantage of a performance booster that's built into DOS.

The BUFFERS command tells DOS how much RAM to reserve for keeping disk information in memory. Every time DOS reads the disk, it gathers up the amount of information specified by the BUFFERS command, even if only part of that data was requested. DOS holds the rest of the data in memory just in case you or your program need it later. If you do request something that DOS has filed in memory, DOS doesn't have to waste time reading the disk: it just recites what it remembers. Because reading from memory is much faster than reading from disk, the buffered data can be accessed

much more quickly—in microseconds instead of milliseconds.

Similarly, when writing to disk, DOS holds data in its buffers and doesn't actually write it until the buffers fill up or until you formally close the disk file.

You specify the amount of memory to set aside for this purpose in your CONFIG.SYS file, which DOS reads as it boots up your system. The command takes the form

BUFFERS = xx
where xx, a number between 1 and 99, is the amount of memory you want DOS to use for buffering, given in blocks of roughly 512 bytes (corresponding to one disk sector). If you do not put a BUFFERS command in your system's CONFIG.SYS file or you have no CONFIG.SYS file at all, DOS assumes a value of 3.

Don't go overboard when specifying buffers: using too much memory for buffering can slow down your system when a program tries to read a large number of short, scattered records. In that case, DOS must read a large block of information from disk when it needs only a little.

There is substantial debate surrounding the proper number of buffers to specify. Two safe assumptions are that 3 are too few and 99 too many. A good compromise is 20.

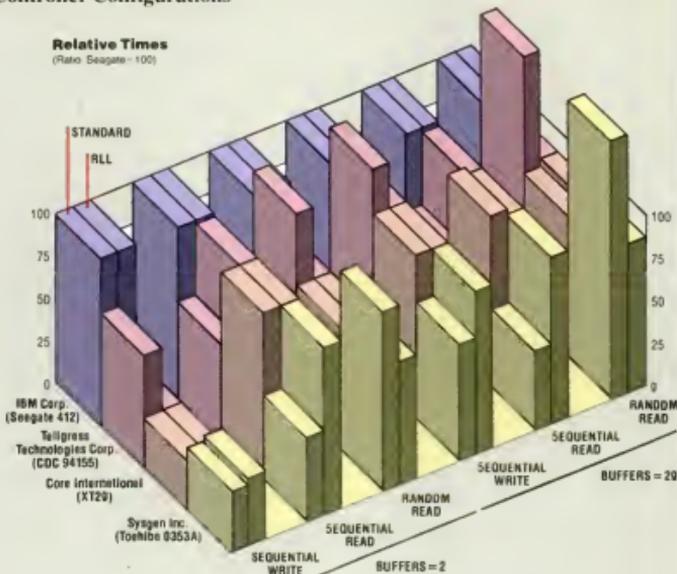

The best number to use depends on the applications you run. If your favorite programs consistently read and write large blocks of data, you should use a large number of buffers. If your applications read and write many short records at random, a small number will work better for you.—Winn L. Rosch

Benchmark Test: Hard Disk Drive/Controller Configurations

The differences in drive performance are most notable under a default buffer value of 2. The Core XT20 appears wantonly fast, besting the standard IBM drive by nearly 70 percent when doing sequential writes. However, sector buffering smoothes the gap down to a "mere" 54 percent for the Sysgen drive during sequential reads. Considering the abject lack of speed built into the Seagate hard disk supplied with the PC-XT, RLL encoding combined with sector buffering makes that drive perform like a hyperdrive, dropping overall differences into the 2 to 15 percent level.

Results were also obtained for two intervening buffer levels, 3 and 10. Both levels favored sequential file operations (a 60 percent improvement over default was typical) over random access (less than 3 percent improvement). At BUFFERS = 20, sequential operations were approximately 5 percent slower than at their optimum times while random access showed a 15 percent (or greater) improvement. All tests were conducted with an interleave factor of 6.

Default setting: BUFFERS = 2

BUFFERS = 20

The Hard Disk Drive/Controller Configurations benchmark test measures the speed advantage gained over standard drive/controller configurations when RLL technology is combined with buffers of various sizes. The test comprises writing a 10-megabyte ASCII file sequentially to disk and reading it back again, first sequentially and then randomly. The standard controller results were achieved by connecting each hard disk to an IBM PC-XT test "mule" via the controller card and special driver software that is ordinarily supplied by the drive manufacturer. An exception to this procedure was the Core International XT20. Because it was shipped with a controller card set up for a larger capacity hard disk and because a replacement was not available in time, the test was run

using the standard IBM Xebec controller. With its own controller card installed, the Core drive might very well have reported faster results on the standard-configuration part of the test. In the case of the IBM PC-XT, the standard drive is the Seagate ST-412. Tallgrass Technologies' drive/controller combination, the TG-5525, uses a CDC 94155 drive and its own controller. The Sysgen Matched Pair incorporates the Toshiba 9353A drive.

All of the RLL tests were performed with the same Scientific Microsystems DMTI 5527 RLL controller. As the text indicates, the typical IBM PC-XT hard disk (a Seagate ST-412 in this case) is set up to operate to obtain

comparative results for the IBM drive/controller configuration using RLL. PC Labs decided on some straight-of-hand to trick the drive and used OMT/Disk software to reserve a cylinder for error mapping. The loss of a cylinder ordinarily means 35K less data storage, but with RLL, the aggregate storage capacity of the Seagate drive (originally 10 megabytes) rose to just over 15 megabytes. All other drives were formatted (low and high levels) via the standard IBM Diagnostics disk, DOS FDISK, and FORMAT commands. In all RLL cases, the partition size was restricted to 305 cylinders to match the ST-412, even though this technique is extremely wasteful. All drives were formatted to the maximum possible storage

ACQUIRING A HARD DISK CONTROLLER

Although hard disk controllers look just like any other PC expansion cards, they tend to be hard to find. Most computer dealers won't sell them because in the past they have been more difficult to install than any other PC peripheral, and, consequently, there was no demand for naked controllers.

At one time, the complexity involved in getting a controller/hard disk combination to work made this situation practical. If you were an assembly language programmer with a PROM burner for making your own firmware chips, you could write a special program that matched a given model of disk to the controller and make it into a memory chip compatible with the rest of your PC system. In the

past, only system integrators and a few mail order vendors could afford to buy or write the code needed to make any specific controller/hard disk system work straight out of the box.

The Adaptec and Scientific Micro Systems cards simplify the matter of installing a disk controller. They record all the setup information needed to operate the disk on the disk itself, and they automatically retrieve it when they need it. Software is available—either built into the controller card itself (Adaptec) or as an optional disk (Scientific Micro Systems)—that allows almost anyone to record this information at the time the disk is first low-level-formatted. If you have a little technical knowledge, you can prob-

ably match one of these new controllers to your own hard disk. (If you opt for the Scientific Micro Systems controller, be sure to buy the *OMTidisk* software.)

While many computer dealers still won't sell controllers without disk drives, you should be able to buy these advanced controller cards at some of the same places the dealers do.

Adaptec reports that its products are available through three large distributors: Wyle Laboratories in the Western United States; Pioneer Standard Electronics in the East; and Hamilton/Avnet nationwide. These distributors have branches in most large cities, and you can usually place telephone orders with them. —Winn L. Rosch

The Canon Bubble-Jet Printer is very compatible with all these units.

The difference was apparent in both random and sequential access tests, with the biggest differences appearing when we ran relatively slow disk drives. In fact, for sequential disk access, buffering proved to be the great equalizer.

The intelligent full-track buffering and 1-to-1 interleave of the Sysgen Matched Pair gave it a tiny performance edge over the other systems in reading sequential files. However, in sequential writing and random disk access, the Core drive with a low interleave outperformed the Sysgen system.

The most surprising factor in the tests was RLL. The 30 percent faster data transfer rate achieved by the denser data-coding scheme did in fact substantially speed up data transfers, notwithstanding the XT's poky processing. We formatted the standard IBM PC-XT hard disk drive using RLL even though this drive is not recommended for RLL applications. The speed

difference—almost 20 percent—was most apparent when relatively few DOS buffers were specified, but it still amounted to 10 percent in both the sequential and random

■ The PC Labs test results show that no one system or technology will be the fastest in every possible application.

access modes with 20 sectors of DOS buffering.

The PC Labs test results show that no one system or technology will be the fastest in every possible application. Even in-

creasing the number of DOS buffers proved to have its drawbacks. For instance, while increasing the number of DOS buffers improved most results, it actually slowed down the sequential reading of the 10K-byte test records. With shorter records, the adverse effects of increased buffering would have been even more dramatic.

Even with the latest technologies, optimizing hard disk performance remains something of an art. Getting the most from your system is going to require some experimentation with applications software and the hardware that you already have. As is the case with any art, however, you'll have more to work with when you use better tools. RLL data coding, full-track buffering, and fast-access disk drives will help give you better performance. 

Winn L. Rosch is a contributing editor of PC Magazine.

Because high-speed, high-quality printing should be seen, not heard.

The Canon Bubble-Jet Printer uses an exclusive system that combines thermal and ink-jet technology to print an ultra-fast 220 cps. While keeping the decibels down to a whisper.

For professional word processing, the Near Letter Quality mode (NLQ) churns out crisp, clear copy at a brisk 110 cps. And the BJ-80 has three graphic

image modes for high-resolution printouts of charts, graphs and diagrams.

Of course, the Bubble-Jet is fully compatible with Canon's fine line of Personal Computers and plug-compatible with the IBM PC. It's compact, lightweight and surprisingly affordable.

Ask your dealer about the full line of fast, efficient, economical Canon Printers. Find out what all the quiet excitement is about.

TRIPLE CROWN NEW EDITIONS OF THREE WINNING WORD PROCESSORS

Third-generation versions of XyWrite, VolksWriter, and Microsoft Word hit the shelves this year. Will fans be enchanted with their new features—or alarmed by unexpected changes?

Professional-class word processors, the elite members of the breed, are powerful word engines packed with a slew of advanced formatting and editing features. Contenders in this highly competitive arena are constantly developing new features and tricks for their products. But word processors generate a high degree of user loyalty, and word processing designers and programmers have to take care that the changes they incorporate in their upgrades won't offend their faithful fans.

New editions of *Microsoft Word*, *Life-tree Software's VolksWriter*, and *Xy-Quest's XyWrite* appeared this spring. Each of these products has been commercially successful, is highly regarded in the PC industry, and has the sort of committed following that must be nurtured. The up-

graded versions reviewed here manage to keep their devotees happy: the same commands and features work in the old and new versions, and enhancements are largely consistent with each program's traditional way of doing things.

Microsoft Word, Version 3.0, *VolksWriter 3*, and *XyWrite III* are all major upgrades, and, as their names indicate, all three are third-generation programs. We asked a die-hard fan of each word processor to take a close look at the new edition. First, the reviewers ran their assigned products through the same script used in *PC Magazine's* special issue on word processing (Volume 5 Number 2) to make sure each could still handle the same tasks

in the same way. Then they concentrated on learning the new aspects of the products.

If you use an older edition of *Word*, *VolksWriter*, or *XyWrite*, you'll surely be interested in how well the new ones work. If you use another professional-class word processor, you may discover a new feature that will entice you to make a change.

Professional-class products have a reputation for being difficult to use. If you or your company use a personal or corporate word processor for that reason, read on. You may find that the advanced features of these products are more attractive than you thought. Besides, your increasing computer skills, along with substantial efforts by product designers, make these professional word processors easier than ever to use.

Volkswriter 3

When computer consultant Camillo Wilson brought *Volkswriter* into the world in 1982, the IBM PC was itself but a newborn babe, with single-sided disk drives and rarely more than 64K bytes of RAM. Wilson's pride and joy soon became a popular companion for the infant PC because it was fast, easy to learn, and reasonably priced.

Over the years, as PCs have grown more powerful and users have grown more knowledgeable, *Volkswriter* has grown along with them, adding new features and greater flexibility. Now in its third generation, the program is still fast, easy to learn, and reasonably priced, but it's a babe-in-arms no longer. It boasts many of the same features as its higher-priced competitors while retaining its straightforward personality.

Although some high-end features, such as windows and an undo key, are still missing, Wilson says that *Volkswriter 3* includes the improvements most often requested by *Volkswriter* users, who are Infetree Software's intended market. In

evaluating *Volkswriter 3*, it's important to keep those users in mind. They tend to be owners of small businesses and corporate managers and their secretaries. They like the simplicity of a personal word processor such as Software Publishing Corp.'s *PFS:Write* but need more power. *Volkswriter*, which is midway in price and features between the personal word processors and the fully loaded, high-end products, meets the needs of that audience.

Volkswriter 3 is clearly the heir of its popular predecessor, *Volkswriter Deluxe*. It sports the same logical menu structure and the same mode-less editing, which lets you move easily from text entry to editing without entering a command mode. All of *Volkswriter 3*'s editing commands are summoned by function keys, either alone or in combination with the PC's Alt, Ctrl, and Shift keys. If you forget which key does what, F1 calls a five-line crib sheet to the top of the screen. A set of embedded double-dot commands, reminiscent of *WordStar*'s dot commands, controls formatting options like headers, footers, and hard page breaks.

PC TOOLS™

ON-DISK TUTORIALS In addition to sharing the same basic structure, *Volkswriter 3* has many of *Volkswriter Deluxe's* bells and whistles, such as the well-designed mail-merge module and access to the full IBM character set, which allows foreign-language and scientific word processing. Also like its predecessor, *Volkswriter 3* has a fine set of on-disk tutorials that teach you all but the most advanced and arcane features. With the help of the tutorials, you could be writing and printing with *Volkswriter 3* within a couple of hours.

Volkswriter 3 also has a lot of fancy new tricks. An integrated spelling checker springs into action at the touch of a function key to check a word, a marked block of text, or an entire document. Floppy disk users will appreciate the fact that using the spelling checker does not involve disk swapping. You need to switch program disks only once: when you load the program into memory. After that, the spelling checker and its 170,000-word dictionary reside in your drive A:. At your request it will suggest possible corrections, which it can insert into the text at the press of a key. In addition to flagging spelling errors, the spelling checker can catch some punctuation and capitalization errors.

Another new extra is automatic hyphenation. Using a set of hyphenation rules, *Volkswriter 3* automatically hyphenates words that cross into its user-definable hyphenation zone, without any pesky beeping or prompting to interrupt your concentration. The hyphenation is usually accurate, but it does mess up now and then, especially if you set a narrow hyphenation zone, requiring it to hyphenate short words. You can resolve these occasional errors by entering the correctly hyphenated word into *Volkswriter 3's* hyphenation-exception dictionary.

Just as snazzy is *Volkswriter 3's* new math feature. To quickly tote up a column of numbers, you just mark the column with two function-key commands, move the cursor to the place you want the result to appear, press another function key, and your total appears. The math command performs subtraction, division, and multiplication, and it can add multiple rows and columns with a single command. It will also sort tables for you, using any column

EXECUTE ANY DOS COMMAND FROM ANY OTHER RUNNING PROGRAM.

Put all the popular features of the NORTON UTILITIES™ together with a powerful DOS interface. Then make them resident like SIDEKICK™ and what do you have?

PC TOOLS—the only product that lets you execute virtually any DOS command from within any other running program. Here's how you'll use it:

UNDELETE an accidentally erased file while using your word processor.

FORMAT a data disk without leaving your spreadsheet.

COPY files from one subdirectory to another within your communications program.

MOVE files from one subdirectory to another and reorganize subdirectories with ease!

LOOK at another file (and even edit it) from your graphics package.

SEARCH for any file name or text within a file without leaving your database manager.

PRINT a file (as text or hex and ASCII) at any time.

System Requirements: IBM or compatible, 256K, uses only 64K in resident mode. Works with floppy and hard disks (including 3½" disks) and supports Lotus/intel expanded memory!

Call 503/244-5782, M—F, 8—5 (West Coast time) with your   in hand. Or send a check for \$39.95 U.S. plus \$3 a/h, \$8 overseas.

ARC – the No-Problem Computer Company.

Compatibility — The most compatible machines on the market.

Reliability — Ask about ARC. Our reputation in the industry is built on it.

Performance — We introduced the first *turbo* machine in 1984, and haven't stopped since!

The ARC 286 Turbo

Fully IBM AT™ compatible, the ARC 286 turbo has been reviewed by InfoWorld and by PC Magazine.

InfoWorld, May 12, 1986: "The ARC 286 Turbo ... topped the list ... scored better than the IBM PC AT, the Tandy 3000, Zenith Data Systems Z-200, and Epson Equity III."

If you use a 286 based machine, ARC is your company. Our compatibility with IBM™ is the best in the industry. You can use all of your software, expansion cards, network systems. Our chassis looks good, yet is built to stand up to abuse. The 200 watt power supply will support the largest drives and peripherals you might want to add.

But don't take our 286 for itself alone. When you buy ARC products, you get a whole company behind you — warranty, service, and our Technical Support Hot Line — the kind of support you need, and the kind you expect from "The No-Problem Computer Company".

The ARC 3278 PC

Full function 3278 terminal. Coax connector attaches to your IBM or compatible 327x cluster controller. File transfer software that is the fastest in the industry is also available at a low per-mainframe charge. Beats IRMA™, P.J.™, PCOX™ and IBM™.

System comes complete with 640K RAM, 4.77 / 8 MHz *turbo* mode, Hercules™ compatible monochrome graphics, amber monitor, and one 360KB floppy disk drive.

All ARC systems include full one year manufacturer's warranty. Independent service contracts by TRW and 3M are available optionally.

Let us introduce you to the complete line of ARC Turbo products — including the ARC Turbo, Jet Turbo, Model 10, and The World computer. For a complete catalog of ARC products, including a list of ARC Authorized Dealers, please write: ARC Consumer Services, 1101 Monterey Pass Road, Monterey Park, CA 91754.

■ VERSION 3 UPDATES

you choose as the sort key. You could quickly arrange an address list in alphabetical order by last name and just as quickly rearrange it by ZIP code.

ENHANCED FORMATTING Perhaps the biggest news about *Volkswriter 3* is its enhanced print formatting. To give you more control over the finished document, *Volkswriter* uses a new device it calls a layout, which specifies tabs, margins, line spacing, page size, justification, and other print parameters. A document can contain up to 15 different layouts, which are stored along with the document. You can create a layout on the fly while you're editing or browse through previously created layouts, selecting one that meets your needs. You can save your favorite layouts in named style sheets.

Volkswriter 3 embeds the layout command in your text, which is where it controls the appearance of the text until it encounters the next layout command. The layout commands refer to non-ASCII formatting information that *Volkswriter 3* stores at the end of the document file. (You can still use the DOS TYPE command to review the contents of your files.)

With *Volkswriter 3's* layouts, you can change the appearance of a document with just a few keystrokes. For instance, to change your flush-left block-style paragraphs to paragraphs with initial indentations, you simply revise the layout controlling those paragraphs to include an initial indentation. *Volkswriter 3* will automatically reformat the paragraphs to match the new layout.

Although previous versions of *Volkswriter* could also use multiple formats in the same document, you had to print the document to see the placement of page breaks. *Volkswriter 3* shows the changes while you're still editing so that you can see accurate page breaks, margins, and spacing. Like older *Volkswriter* versions, *Volkswriter 3* will permit you to edit a double-spaced document, showing accurate page breaks, without wasting screen space by actually skipping lines. If you prefer, *Volkswriter 3* can display the spacing on-screen, and so you get a closer approximation of the final printed page.

Other enhanced formatting features may be helpful for preparing your next for-

COPY II PC™ OPTION BOARD

AN ALMOST FOOLPROOF WAY TO MAKE ARCHIVAL BACKUPS OF PROTECTED SOFTWARE!

The Copy II PC Option Board is an add-in board that will give your PC the same disk duplication technology used by most disk duplication firms (who put the copy protection on software in the first place).

DUPLICATES NEARLY ALL PROTECTED DISKETTES.

The Option Board can easily backup almost all protected diskettes for the IBM PC, including ones software-only backup programs can't touch. It even includes a track editor that will allow the more technically inclined to look at protection schemes and edit any data on a diskette.

CIRCLE 156 ON READER SERVICE CARD

The Option Board uses a half-size slot in an IBM PC, XT or AT (with at least 1 360KB floppy disk drive), Heath/Zenith 150, 151, 158, Compaq Deskpro. Extra \$15 cable required for Compaq Portable, HP Vectra and Tandy 1000. Tandy 1000 requires 258K of memory.

F-15 STRIKE EAGLE

For Fighter Pilots—Not Sightseers

Enjoyed by
over **200,000**
satisfied computer
fighter pilots!

THE FIRST. THE BEST.
THE ONLY REAL COMBAT FLIGHT SIMULATOR.

**MAJOR BILL
OVER**
3000 FLYING HOURS

F-15 STRIKE EAGLE is the most realistic, accurate and fun combat flying simulation available. Others have tried to copy it. But none of them have ever strapped on a fighter to experience the thrill and excitement of real combat fighter missions like our Major Bill[®] has. Compare F-15 STRIKE EAGLE versus our famous competitors, better known for their fancy hangar graphics. If you want a **slow sightseeing hanger queen**, buy theirs! If you want a product that has had over 50 outstanding reviews, thrilled over two hundred thousand satisfied computer fighter pilots, and gives you **real** fighter pilot action, then you want F-15 STRIKE EAGLE!

COMPARE —

■ VERSION 3 UPDATES

mal report to the chairman of the board. You can specify different print offsets and separate headers and footers for odd and even pages to facilitate binding. And you can call for a different top margin for the first page of a document.

The inevitable price for this increased power is greater complexity. It took me, a longtime *Volkswriter* user, several days to really get the hang of *Volkswriter 3*'s style sheets and layouts so that I understood when to revise an existing layout and when to create a new one.

At least one handy formatting feature from earlier *Volkswriter* versions got lost in the shuffle. You used to be able to specify a font as part of a *Volkswriter* document format. This made it easy for users of Epson MX-series printers to print an entire document in boldface type, which is the near-letter-quality font for those printers. Since *Volkswriter 3*'s layouts don't control fonts, you have to go through a separate command sequence in order to print a document in boldface, marking the text to be printed in boldface and then issuing the *Volkswriter 3* Boldface command. This inconvenience is not a terrible price to pay for the added power of layouts, but I hope the next release of *Volkswriter* gives us layouts that control fonts, as well as other formatting parameters.

Users of Epson MX-series printers will also encounter one of the program's few bugs. If you attempt to use boldface type together with headers, *Volkswriter 3* gets confused and prints the first paragraph of each page in regular type. A Lifetree Software spokeswoman says that the company is working on a fix, which will soon be available free to registered users.

Another significant new feature is *Volkswriter 3*'s automatic on-screen paragraph reformatting. In older versions of *Volkswriter*, you had to issue a reformat command if your paragraph became ragged in the course of adding and deleting text. *Volkswriter 3* can reformat the paragraph on its own, as soon as you move the cursor, signaling that you're done editing. Because there are times when you might want to protect text against accidental reformatting, *Volkswriter 3* allows you to turn off the automatic reformatting option. You can even disable the manual Reformat command by creating a layout that does

THE FINAL ANSWER TO DATA SECURITY, EXPANSION, AND BACKUP!

A Perstor fixed and/or removable Winchester subsystem is the safest, most versatile way to store your payroll, accounting, financial, and classified data. Perstor's family of products give you the choice of internal or external systems, with your choice of one to six drives in storage capacities ranging from 12MB-160MB.

So if security is first and solutions are imperative, turn to Perstor (Personal Storage) for problem solving features such as these:

- Compatibility with your IBM PC, XT, AT or compatible computer.
- Two drive hot-swappable or four drive co-resident controllers.
- Removable 12MB Winchester cartridges for data storage, backup, archival, and portability.
- Portability between different manufacturers' PCs.
- Unlimited storage as low as \$9.30 per megabyte.
- Present and future software compatibility with direct attachment to the AT controller.*

VERSION 3 UPDATES

not permit any reformatting. *Volkswriter 3* also gives you a cleaner editing screen by keeping paragraph markers and formatting codes out of sight until you need them.

PRINT QUEUING Also new to *Volkswriter 3* is the ability to print a document while you continue to edit. Called print queuing because the documents wait in an orderly line for their turn to be printed, this feature requires DOS 3.0 or later and a hard disk drive. Wilson explains that he decided to use the DOS 3.0 PRINT command to manage the print queue so that *Volkswriter 3* would remain well behaved and would not require revision when new versions of DOS came on the market.

To use print queuing, you have to include the PRINT statement in your AUTOEXEC.BAT file. When you choose the print queue option on *Volkswriter 3*'s print menu, the program writes the document to an intermediate disk file and then sends it to the printer. You can add documents to the queue or remove them. Printing will continue as you use *Volkswriter 3* or even if you switch to a different application.

Another new option on the print menu is automatic envelope addressing. *Volkswriter 3* can pick up the inside address from a letter and print it on an envelope. The program is even smart enough to correctly position the address, if you use a standard 9½-by-4-inch envelope. You just align the printhead with the top of the en-

velope, and *Volkswriter 3* does the rest.

For people who need to share documents with other word processors and with other IBM equipment, *Volkswriter 3* has a new set of utilities that can translate files to and from DCA RFT, *WordStar*, and ordinary ASCII formats. When *Volkswriter 3* reads a foreign file, it inserts paragraph markers whenever it encounters a blank line. This remedies an older *Volkswriter* versions problem, which could turn a foreign document into a single large paragraph if you forgot to insert the paragraph markers before beginning to edit.

For imported documents in which the paragraphs are not separated by blank lines, *Volkswriter 3* has an additional safeguard against accidental reformatting. The translation program creates an initial layout that forbids reformatting, so you have the chance to manually insert any missing paragraph markers before you start revising the document.

Old hands at *Volkswriter* will notice other extra goodies lurking here and there. For example, the search function can now ignore case; the directory can use DOS wildcards for display and file deletion; and the editor remembers your last cursor position when you return to a document after using another menu.

Volkswriter 3 is a worthy scion of the *Volkswriter* line. It possesses more power and polish than its predecessors but retains both the speed and ease of use that have won *Volkswriter* its loyal following.

—Dara Pearlman

your searches by using any of six different kinds of wildcard characters to help target the text you sought. *XyWrite III* takes the next step, letting you extend the search range to include all the files (or DOS wildcard-designated groups of files) in a directory—and even in multiple directories and drives. When *XyWrite* finds a match, it presents it immediately in a full-screen context; you can then choose to open the file for editing, look for other occurrences in that file, move to the next file, or simply halt the search. This feature alone saves me hours.

Similarly, while *XyWrite II Plus* could handle two documents simultaneously, *XyWrite III* can accommodate up to nine. You can access the text windows as individual full screens, horizontal or vertical split-screens, or multiple overlays, which are sized and positioned to your taste.

Command oriented rather than menu driven, *XyWrite* operates both through single-word entries (or their two-letter abbreviations) typed on a dedicated command line and through function and cursor keys (augmented with their Shift, Alt, and Ctrl variations). To simplify entering the typical set of formatting commands for beginners, however, the Alt-Tab keystroke in *XyWrite III* brings up a self-explanatory full-screen display on which you enter margins, any desired tab stops (regular, right justified, centered, or decimal), and first-line and remaining-line offsets directly on a ruler line.

XyWrite III

Extraordinary speed and versatility were hallmarks of *XyWrite II Plus*. *XyWrite III*, Version 3.06, adds a host of powerful new capabilities that broaden this word processor's appeal to newcomers and are certainly worth the \$100 update cost for present users.

Characteristic of *XyWrite III*'s enhancements is its treatment of the basic search capability, which lets you scan a file for one or more occurrences of a name, number, or other string. In *XyWrite II Plus*, this facility was more versatile than in most word processors, providing for forward, backward, case-sensitive, and case-insensitive searches. You could further refine

INTRODUCING OPEN ACCESS® II™

THE FULLY INTEGRATED BUSINESS SYSTEM
WITH THE WORLD AT YOUR FINGERTIPS

Open Access II is a new, super-program which can perform virtually every managerial and business task you'll ever need with performance and ease-of-use unheard of in the industry.

Open Access II combines an extremely powerful relational database and superior spreadsheet with data communications, word processing, 3-dimensional graphics, and time management. Information is conveniently changed from module to module.

Open Access II's Database features an effective and flexible report generator and user definable screens. "Programmer," our new Database language, features simple interacting English-like commands to produce your customized applications.

Open Access II's Spreadsheet offers a unique combination of business problem solving capabilities; including goal-seeking, and an advanced table look-up command. Professional business presentations are easily produced by the enhanced graphic capabilities.

Open Access II's improved Word Processor can merge data from Spreadsheet or Database easily to produce reports, mail merge and graphic presentations.

Open Access II's data communications provides you with the capabilities to handle any of your micro computer communications needs. All of Open Access II's modules work together and data is easily communicated to the rest of the world.

**BEST OF ALL,

AT performance at an XT price. Any way you look at it.

The TeleCAT-286: \$2995. Complete. The TeleCAT-286 EGA: \$3595. Complete.

If you're looking for a quality AT-compatible computer, TeleVideo® offers you not one, but two. With the TeleCAT-286. And now, the new TeleCAT-286 EGA.

Both of these compact computers give you a complete set of features. Like 512K RAM. A 1.2MB floppy. A 20MB hard disk. And a high-resolution monitor.

There's even a free 90-day nationwide on-site service agreement.

And if you want full EGA color, take a look at the new TeleCAT-286 EGA. With its

high-resolution 13-inch EGA color monitor, you get a full spectrum of brilliant displays. Its low-glare, high-contrast dark screen makes it easy on the eyes, too. You can even change this screen to green monochrome, with the flick of a switch.

What's more, the new TeleCAT-286 EGA comes with an EGA card that's fully IBM compatible, so you can run any full-color AT graphics software packages. And they'll never look better. Because this EGA card features 256KB of display RAM, and 640 X 350

graphics resolution, for bright colors and sharp text.

The result? A clear, crisp image that no CGA color monitor can ever live up to.

The TeleCAT-286. And the new TeleCAT-286 EGA. Find out more about them. Call 1-800-TELECAT (835-3228), Dept. 311, for the name of your nearest TeleVideo dealer.

And see for yourself why TeleCAT computers are definitely worth looking into.

 **TeleVideo®**
Settle for more.

Point. Shoot. Take Command.

Rip full throttle through your data with this time-saving control program from Peter Norton. The Norton Commander™ software gives you a fast, powerful *point and shoot* method to perform your computer operations. Point to a directory and The Commander jumps to it. Point to your data file and The Commander runs your data with its matching program. Speed through listings, update files like lightning. Delete. Copy.

Built-in sweep functions manage your disk. Add your own user menus for one-key operation. *And it doesn't eat up your screen while it's doing it.* Easy to use with keyboard or mouse. The Norton Commander. The quickest way to enhance your PC, and *take command.*

The Norton Commander. Designed for the IBM® PC, PC-AT, and DOS compatibles. At your software dealer or order direct for \$75* from Peter Norton Computing, Inc., 2210 Wilshire Boulevard, #186, Santa Monica, CA 90403. 213-453-2361. Visa and Mastercard welcome.

*Subject to shipping and handling charges.

■ VERSION 3 UPDATES

Formatting commands take effect immediately, automatically affect all subsequent text, and may be changed as often as you like. They appear as bold triangles; when you place the cursor on a triangle, its meaning is displayed on a prompt line. An expanded-mode display, which shows all the embedded codes within European-style quote marks and permits you to edit rather than simply replace them, can be toggled on and off in place of the normal WYSIWYG display.

A major new feature of *XyWrite III* is its support for proportional spacing. The implementation includes user-modifiable width, font, and attribute tables for all

- While *XyWrite II Plus* could handle two documents simultaneously, *XyWrite III* can accommodate nine.

printed output combinations your printer supports. Ready-to-run printer tables for more than 50 printers (including the Apple LaserWriter and the Hewlett-Packard LaserJet) are provided, as well as full-customization capabilities for all printers. While many word processors that nominally support proportional-space printers revert to character-count-based lines in their displays, *XyWrite III* counts the individual character widths and breaks lines on-screen where they will be broken on the printout, even if you mix type sizes in mid-line. (Proportionally spaced printouts using older daisy wheel printers that lack their own hardware-based logic can be user-implemented, but it is a painfully slow kludge of a process. *XyQuest* promises to write the necessary software drivers for these machines if demand warrants.)

REMAPPING THE KEYBOARD *XyWrite* has traditionally used many key combinations not supported by DOS (for example, Ctrl-Del deletes to the end of a line), and it further permits users to remap

At last! - Fast, On-screen

FLOWCHARTS

Finally! An on-screen flowchart processor that knows about flowcharts - not just another "screen draw" program that makes you do most of the work.

Interactive EasyFlow is a powerful full-screen graphics program dedicated to flowcharts and organization charts. With this program you can quickly compose charts on the screen. More important, you can easily modify charts so they are always up to date.

Features: • Text is automatically centered, character by character, within shapes as you type it • Text formatting controls allow you to over-ride the automatic formatting where desired • Lines are created by specifying the starting and ending points - the program automatically generates the route • Cut and paste facility allows arbitrary chart fragments to be moved, copied rotated, reflected or sent to/from disk • Shape insert-delete and row/column insert-delete • Charts can be up to 417 characters wide by 225 lines high. Charts too wide for the printer are automatically printed in strips. • Charts can be larger than the screen - the window into the chart scrolls both horizontally and vertically as necessary • Works with many popular matrix printers including Epson, IBM graphics printer and compatibles. Full support for HP LaserJet and LaserJet Plus. Works with

HP 7475A (& compatible) plotters. Can be used with ANY printer when non-graphic (character) output is acceptable

• All standard flowcharting shapes included • Most shapes supplied in large, medium and small sizes • Extensive manual (100+ pages) includes many examples • Context sensitive "help" facility provides immediate assistance at any time • Any number of titles can be placed on a chart • Commentary text blocks can be placed anywhere in the chart • Fast: written in assembly language • Plus many more features than we can mention here

Requires at least 320K memory, DOS-2 or higher and an IBM or Hercules compatible graphics card. On EGA, full 640x350 resolution is used.

Order direct for only \$149.95 + \$2.00 S&H (USA/Canada), \$10.00 (foreign). Payment by MO, check, VISA, MasterCard, COD or Company PO. Rush orders accepted (\$15.00 S&H; USA/Canada only). Rush orders received by noon will be delivered the next business day (to most locations).

Order Desk: 1-800-267-0668

The sample screen display shown below is typical of what you see while editing a chart. Other screen displays are provided for entering titles, changing options, getting "help" and so on.

■ VERSION 3 UPDATES

the keyboard at will. (XyWrite's keyboard, printer, help-screen, and startup files can all be edited and subsequently loaded as ordinary text files.) XyQuest achieved this flexibility by taking over the keyboard interrupts, a procedure that has in the past resulted in incompatibility with memory-resident programs that, like XyWrite itself, permit extensive construction of keyboard macros.

XyWrite III addresses this problem in two ways. First, it provides a short (1,646-byte) program called XYKBD.COM, which is designed to be the first item loaded by your AUTOEXEC.BAT file. XYKBD.COM checks incoming keystrokes to see if they are intended for XyWrite or for another memory-resident program. This prevents incompatibilities with many (for example, Borland's Turbo Lighting), though not all, programs. Second, an absolutely compatible DOS.KBD file can be loaded (and a one-line default command inserted in your printer file that restricts XyWrite to the DOS-supported range of keystrokes. Since this involves remapping so many of XyWrite's command functions to unfamiliar locations (and there is not room for all implementable XyWrite functions), this is not an option any XyWrite user I know of has elected.

XyWrite permits you to run it in conjunction with other programs in additional ways. While editing a document, you can at any time drop into DOS to run a different application entirely. When you eventually exit from DOS, you'll be back exactly where you were in your XyWrite document. Indeed, you can run many DOS programs without even this intervening step, by entering, for example, the command DO BASICA directly on the XyWrite command line. XyQuest has added to this capacity by implementing full DOS path support in XyWrite III, so that files can be called from and returned to any place on a hard disk. In addition, while XyWrite previously permitted you to issue DIR, CD, and DEL commands directly on the command line, you can now sort directory files in forward or reverse order according to filename, extension, size, date, and time.

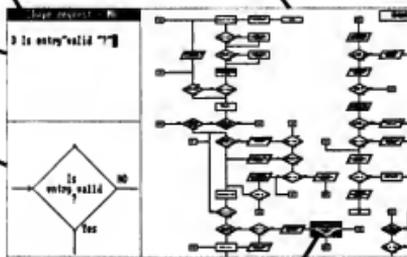

NEWSPAPER-STYLE COLUMNS
New in XyWrite III are two different text-column-handling facilities. Varying-width

STATUS BAR (not to be confused with a wet bar) tells you what Interactive EasyFlow is doing at all times.

CHART WINDOW gives an overview of your chart; this example shows the "normal" view. "Close-up" view shows a smaller part of the chart in more detail. "Wide-angle" view shows a larger part of the chart at reduced size.

TEXT MESSAGE WINDOW used to enter user text and to display messages from Interactive EasyFlow

CURRENT SHAPE WINDOW - shows the content of the current flowchart shape (the one under the SHAPE CURSOR) in complete detail.

SHAPE CURSOR shows where you are in the chart. Cursor keys move it around; chart window scrolls if you run off the edge of the window.

VERSION 3 UPDATES

columns (up to 10 in the standard version, 16 on request) with full word wrap are handled by a set of column table commands. Each column may be given its own complete set of formatting and default parameters. (XyWrite III's new Styles command, which allows named groups of formatting commands to be created and called directly, can be useful here. The Styles command would be far more useful, however, if you could save the templates you create

XyWrite has traditionally used many key combinations not supported by DOS, and it permits users to remap the keyboard.

with as disk files.) Columns are displayed in normal WYSIWYG fashion. For applications in which newspaper-style column "snaking" (up to six columns, with user-selectable gutters) is desired, the entry process is much less cumbersome, though in this case to see a WYSIWYG display you must go through a type-to-screen review step.

While XyWrite III does not bundle either a spelling checker or an on-line thesaurus, it works (using XYKBD.COM) with most standalone programs, including IBM's Word Pro, the Random House Reference Set, Turbo Lightning, and Word Finder. The program does, moreover, include a new automatic hyphenation capability (based on the Kneuth algorithm) and a user-expandable dictionary for words whose hyphenation does not follow normal rules.

While the extraordinary speed with which XyWrite performs block moves and copies, search-and-replace operations, and page- or document-length scrolling are probably the most dramatic aspects of the program, its adaptability to specific user requirements may be the secret of its long-term attraction. Everything (or so it seems)

about the program is accessible and customizable. You can use headers and footers of any length and with different formats even for left and right pages, if you like. Footnotes can appear at the bottom of the

page (with different separators of your choosing for notes that carry onto a second page) or as end notes. For outlining, paragraphs can automatically be numbered in *XyWrite III* using up to ten counter levels,

selectable among regular numbers, Roman numerals, or letters of the alphabet.

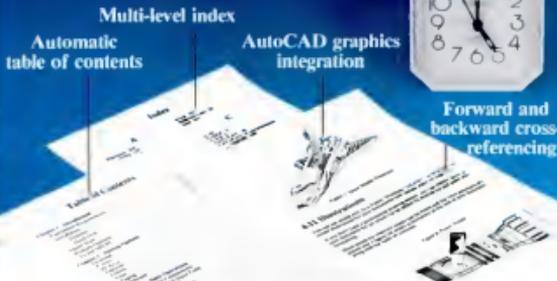

ALL OLD FEATURES IN TACT All the traditional features of *XyWrite* have been retained, and none of its wonderful flexibility lost. If you want "dead" keys for foreign accents or you want to add an unimplemented function call by assigning it to an unused function key or you want to change the normal "soft" hyphen from the default tilde to the Alt-hyphen so it won't ignore the carriage return symbol used in 1-2-3 macros, it's still extremely easy to modify the keyboard file.

Even easier is the creation of keyboard macros (known in *XyWrite* as save/get)s, which can contain anything from a few keystrokes to whole document-length texts. A handy feature is the ability to ap-

STOP THE PRESSES!

It's 5 p.m. and your 300-page book is due at the printer by 6 p.m. You think you have it all together until you notice some of the text has been left out. Can you add it, reflow the text, make another copy and get your document to the printer on time?

With LaserScript,[™] an IBM PC and a laser printer* you could not only make it on time, but in style.

LaserScript[™]

LaserScript gives you large document capability and camera-ready copy right out of your laser printer.

Want to know how? Call or write for more information.

■ A handy feature is the ability to append new text to old save/get)s, which allows you to concatenate strings as you go.

pend new text to old save/get)s, which allows you to concatenate strings as you go. *XyWrite* permits up to 36 save/get)s to be active at once, and these can be either temporary or—like any defined (blocked) section of text—can be stored to a file. More ambitious users can construct, store, and run whole programs from the save/get key.

While modifying your printer file to change its width tables, substitute different characters, and create new combinations of attributes for printout is tedious, it is feasible—given the clarity of the reference manual—for most users. (In *XyWrite III*, these tables are still ASCII editable, but you have to learn a completely different syntax and vocabulary.) It's far easier, however, to make custom changes in the default values for automatic backup, formatted at end-of-file, and the colors used to

YOUR HARD DISK DOESN'T HAVE TO BE HARD!

This easy-to-read directory map shows you all directories on the disk while allowing effortless creation and removal of directories. One keystroke gives you access to any directory on any disk. *Seeing the directory structure in this way helps you better understand your hard disk.*

Q-DOS II OFFERS FEATURES NOT FOUND IN DOS:

- Find Any File on Any Disk in Under 5 Seconds • Edit and Print Files • Instantly Display Sorted File Listing • View and Change File Attributes • Perform DOS Backup of Your Entire Hard Disk • Copy, Rename, Erase or Move Groups of Tagged Files • Compare Two Separate Directories Instantaneously • Instant Directory Map of Any Disk • Online Context-Sensitive Help Screens Provide Instant Access to the Manual • Customize Screen Colors

Q-DOS II ENHANCES THESE DOS FEATURES:

- Copy • View • Rename • Make and Remove Directories • Change from one Drive to Another • Display Available Space and Memory

WHAT THE EXPERTS ARE SAYING

"In fact, when my department had to make a decision on software for our secretaries who are computer novices, we chose Q-DOS since we felt that newcomers would appreciate Q-DOS's more extensive online help." **B. SIMON, PC MONITOR, April 1986**

"Q-DOS...is one of the better programs available, especially for the novice user." **PC MAGAZINE, May 13, 1986**

"If you blink, you can miss Q-DOS's execution. It copies and erases files in half as much time as some programs. Q-DOS's FIND command is so fast, it's amazing." **PC COMPANION, June 1986**

"Q-DOS would still be a bargain at the high prices of its competitors." **COMPUTER BUYER'S GUIDE, July 1986**

■ VERSION 3 UPDATES

display *XyWrite*'s modes (normal, bold, underline, reverse, bold underline, bold reverse, superscript, subscript, and default to surrounding display mode). These defaults, which are stored in the printer file, are loaded with the program and can be changed and reloaded with a few keystrokes. For that matter, you can load another entire printer file at any time.

XyWrite III had no problem handling the series of editing tasks in the test program. Its mail-merge facility worked perfectly well, and I could do the math, though I had to add commas to the amounts manually. In addition, I found that the bug in the *XyWrite II Plus* Pause command has been eliminated, so it's easy now to stop in midline at an exact point to change print wheels, for example.

EXTENSIVE HELP *XyWrite III*'s reference manual is extensive (524 pages) and very clearly written. In addition, the pro-

■ Users at all levels will welcome improvements *XyWrite III* has made in on-screen help files.

gram supplies several tutorial and setup manuals (installation, quickstart, basic word processing, and applications), a plastic template for function-key identification, and a few sample files on a "training disk." The tutorials, while clear enough, are paced at the level of a real beginner. On the other hand, users at all levels will welcome improvements *XyWrite III* has made in terms of on-screen help files. The program does not supply automatic con-

text-sensitive help, but it does offer on-screen assistance and explanation in any one of three forms: a traditional, terse set of screens (OLD.HLP), which will be of use primarily to users who are already familiar with *XyWrite II Plus*; a SHORT.HLP file, which covers most of what a user with a little experience of the program may have forgotten; and a LONG.HLP file (170K), which offers near-reference-level instruction. These help screens can themselves be edited and modified (by a knowledgeable user) to customize them for particular corporate environments.

If *XyWrite* remains somewhat harder to learn than many other word processing programs, it offers in return almost limitless possibilities for customization to match your individual work habits. The standard version even supports the use of up to five network drives, and EGA users can request (at no charge) a version that

Meet The New Chairman Of The Board.

DEVELOPED WITH PC MAGAZINE

Chairman™ is the first true multiuser bulletin board software. Now up to six users can access your bulletin board simultaneously.

Are you tired of using expensive online services as your company's message center? **Chairman** can handle all your electronic mail needs at a fraction of the cost, and with a higher level of security.

Do you service your customers' software? Use **Chairman** to send new software versions to all current users. **Chairman** can also become a clearinghouse for programs and data files. You can upload or download both binary and ASCII files.

A
MULTIUSER
BULLETIN
BOARD

Do you have trouble getting customers to fill out questionnaires? With **Chairman**, you can conduct fast, effortless electronic surveys. Use the built-in editor to create a list of questions. **Chairman** will record user responses for your instant analysis.

We developed **Chairman** initially to work on PC Magazine's extremely busy and demanding interactive Reader Service. **Chairman** is written in DMA's powerful ASCOM IV script language—and we include the actual source code, to make customization for your particular needs a snap.

Are you ready to revolutionize your electronic communications? Start at the top—with **Chairman**.

VERSION 3 UPDATES

supports 43-line displays (actually, up to 66). For speed and flexibility in serious word processing, *XyWrite III* is far and away this editor's choice. —**Craig L. Stark**

Microsoft Word, Version 3.0

Microsoft Word, Version 3.0, is the most elegant word processor I've ever used. Its elegance lies not in its graphics display (although it does look very pretty in rainbow colors on an EGA screen) or in its WYSIWYG screen format that shows you italics, underlines, double underlines, and other print features exactly as they will actually be printed, or in its ability to work with a mouse (I usually don't). *Word* is elegant because it is thorough and consistent in everything it does.

Word is easily one of the most thoughtfully designed software products ever developed for any type of computer. Conceived as a power user's word processor, *Word* included in its first edition (introduced in 1984) an array of features that exceeded the ordinary bounds of word processors. Yet *Word* is smooth and facile to use despite these advanced features because its command structure and behavior are consistent throughout and include the sort of details that other products often omit.

Word's greatest achievement is flexible yet accurate document printing that works

Custom forms. Easy.

Isn't it frustrating? You need all kinds of forms to run your business, but your word processor can't draw lines and your graphics software won't type. Now FormWorx™ lets you create top-quality business forms right on your PC — or modify existing ones quickly and easily as your needs change. FormWorx is fast, neat and flexible.

Design forms easily. You can use solid, double, bold, or dotted lines. And choose from a variety of graphic symbols and type sizes (including compressed type on most printers) using simple commands and pop-down menus. Pick from dozens of possible form sizes including 11" x 14".

Fill out forms perfectly. You can fill out custom or even pre-printed forms on your PC without accidentally crossing a line, using text editing features like on-screen underlining, boldfacing, justification and automatic word wrap. Integrated macros let you automate repetitive tasks, type " boiler plate " phrases

with a single keystroke; jump from one block to another, and more.

Print the whole form or just the data. On any of 100 printers including the HP LaserJet

Special offer! For just \$95* you get the complete FormWorx system including sample forms and superb manual with tutorials. Plus free telephone support. Ask your dealer or order directly using your credit card.

■ VERSION 3 UPDATES

correctly regardless of the make or model of your printer. If you trace the editing events that lead to that result, you'll discover that accurate printing was the goal of *Word's* designers from the outset and that

nearly every editing feature of the program is oriented to reaching that objective as smoothly as possible. That's an important and appropriate characteristic of a word processor for a business world in which a

"paperless office" is but a pipe dream of science-fiction fans.

EVOLUTIONARY FEATURES With each new edition, Microsoft Corp. has extended *Word's* power, enhanced its elegance, and increased its speed, and *Word*, Version 3.0 (released last April), is no exception. Microsoft officials like to call the new release of *Word* evolutionary rather than revolutionary, and they are right to do so. Its new features are not earth-shattering or, in most cases, even unique. But Version 3.0 is outstanding nevertheless because throughout its new features it maintains the consistency of operation and (mostly, at least) attention to detail that have made it so attractive. Current users will have no difficulty adjusting to the new version.

New features allow you to create indexes and tables of contents automatically, define and use hidden text without restrictions on what type of text it is (header or table of contents entry, for example) or where it is, sort paragraphs in a variety of ways, do arithmetic in tabular columns or anywhere else, define and use vertical column blocks, align column components horizontally, and create outlines using Microsoft's implementation of a Living Videotext *ThinkTank* clone. Some menu and other operational changes result in even greater ease of use.

Word's printer support has been enhanced in Version 3.0, especially for laser printers, and Microsoft now ships a guide, called *Printer Information*, that makes it easier to define your own customized printer drivers (an especially good idea because the new drivers are incompatible with old ones and customized versions will have to be changed).

The user manual has been rewritten and expanded into two volumes: *Using Microsoft Word* and *Reference to Microsoft Word*. Each volume includes a complete index indicating topic locations in both. The best documentation news of all, however, is *Word's* new on-screen tutorial. Microsoft improved upon the already outstanding tutorial supplied with Version 2.0, and then went a step further by integrating it into *Word's* context-sensitive on-line help facility. Anytime you ask for on-line help and find that the information

Does your laser printer have enough power to produce a stunning document?

Only SoftCraft offers you: 1. Font variety, 2. Formatting power, 3. The ability to create custom characters and symbols.

Armed with Fancy Word, Fancy Font or Laser Fonts your laser printer becomes a high-quality alternative to expensive, time consuming typesetting services. SoftCraft products maximize your laser printer's potential by easily turning your newsletters, presentation materials, documents and invitations into works of art.

In fact, this ad copy was printed using Laser Fonts on an HP LaserJet printer!

1. Font Variety

SoftCraft's complete library contains hundreds of fonts in various styles and sizes from 4 to 72 points. Each product comes with fonts in sizes from 8 to 24 points, including Roman, Sans Serif, *Italic*, **Bold**, *Script*, Old English and more.

2. Formatting Power

In addition to all of the conventional formatting commands, *Fancy Font* includes commands that deal with variable-width (proportional) fonts and different height fonts. This is especially useful in setting tables, math formulas and perfectly justified text.

Fancy Word and *Laser Fonts* support all of Microsoft Word's formatting features; no other codes or commands are required.

3. Create Custom Symbols and New Fonts

An included font editing program (optional with *Fancy Word*) allows you to modify any character and create new characters and

logos, up to one inch by one inch. You can also create new fonts, scaled to size, from our database of character outlines.

Choose the Product That's Right For You

Fancy Font: A powerful text formatting and printing program that works with any word processor to provide a wide range of font styles and sizes. You embed simple commands in your document to control *Fancy Font's* extensive formatting capabilities.

Fancy Word: For Microsoft Word users. You use Microsoft Word like you always have, including the paragraph and character format commands, but you now print all the special characters, styles and sizes.

Laser Fonts: Downloads a large variety of fonts, up to 30 points in size, into laser printers at a significantly reduced price over HP. *Laser Fonts* automatically configures Microsoft Word to fully take advantage of the downloaded fonts and can be used with any other word processor that can access soft fonts. *Laser Fonts* can also be used with *Fancy Font* or *Fancy Word* to dramatically speed printing on laser printers.

SoftCraft software runs on PC DOS and MSDOS computers with HP, Canon, NCR, Tall Tree and compatible laser printers (*Laser Fonts* requires a printer with download capability). *Fancy Font* and *Fancy Word* are also available for dot matrix printers.

You've seen the rest. Here's your chance to buy the best.

Intelligent Backup™ from Sterling Software. The best data insurance you can buy.

With as few as two keystrokes per day, Intelligent Backup™ backs up your disks quickly, simply, and inexpensively, providing insurance against data loss due to disk crashes.

Intelligent Backup is the most complete backup system there is. And thanks to advanced technology, it is incredibly flexible and easy to use.

Unlike other backup systems, Intelligent Backup completely automates the backup process. Because it's intelligent enough to figure out which level of backup you need, it not only saves you time, it takes the uncertainty out of using a hard disk.

And Intelligent Backup is easy. With over 300 context-sensitive HELP screens, you'll probably never even need to use our easy-to-read manual.

You can backup to floppy disk, hard disk, disk cartridges, and other

disk devices. What's more, it works with IBM, Compaq, Tandy, AT&T, Leading Edge, and all compatibles and clones.

But Intelligent Backup is more than just a superior backup system. Thanks again to advanced technology, file management and manipulation are easy—even for beginners.

So don't take chances when it comes to your valuable data. Get the best data insurance you can buy. Get Intelligent Backup for only \$149.95.

CIRCLE 269 ON READER SERVICE CARD

■ VERSION 3 UPDATES

provided doesn't quite answer your question, you can start the *Word* tutorial at the press of a key. The tutorial system is context-sensitive like the help system: it will run the section appropriate to your current task (and, presumably, your dilemma), or you can peruse the tutorial index to find and run a different lesson.

OUTLINE PROCESSOR Version 3.0's most impressive new feature is its outline processor. The touch of a function key will change *Word*'s word processing mode from ordinary text editing to outline editing (it's also an option in the window menu), and you'll barely know that you're not using *ThinkTank* until you press the same key to change back. Outlines can include headings and text, and large or small chunks of each can be contracted to hide them from view, or expanded again, at the touch of the gray Plus and Minus keys.

Outline levels for headings and text can be promoted and demoted at the touch of a key, and you can even change your mind and convert a heading into text or vice versa. *Word* lets you automatically number your outline using standard or legal formats, and you can change your mind about which format at any time. You can also easily renumber or "unnumber" the outline. *Word* can sort a section, or all, of your outline (or any other group of paragraphs) if you want to maintain an alphabetic or numerically ordered list, and you can reorder the outline by using block edit commands that work somewhat differently in outline mode. Headings and text can be formatted by ordinary means or take advantage of *Word*'s style sheets (predefined format specifications available to any document); Microsoft has even included special paragraph variants for outline style sheets.

You can use your finished outline as the basis for your finished document because the full array of text-editing features are available to you. Take care, however, because when you contract large blocks of text, the document can easily get larger than you'd ordinarily want it to be. *Word*'s new outline-to-document feature isn't quite as powerful as the "thinking machine" included in Ashton-Tate's *Framework*, but it's close in concept and equally easy to use.

Remember the first time you upgraded your color graphics hardware? The thrill is still the same.

The discovery of color graphics. As a child, it was a significant event. As a business person, it will change the way you use your personal computer.

Genoa Systems proudly introduces a new and colorful technology for the PC called Spectra EGA. The Enhanced Graphics Adapter that lets you rediscover the benefits, and the thrill, of color graphics on your PC.

An EGA with a better vision.

EGA compatibility is an art that only Spectra has mastered. And, while other EGA hardware is incompatible with current industry standards, Spectra EGA fully supports hardware and software designed for the IBM Enhanced Graphics Adapter, Color Graphics Adapter and Monochrome Graphics Adapter. And the Hercules Board.

This means that you don't have to wait around for new

software updates in order to begin enjoying your EGA today.

A lot more than just pretty pictures.

The first thing you'll rediscover with your Spectra EGA is color. There is a whole lot more than ever before. Sixty-four separate colors, in fact, from which any sixteen can be displayed at once.

Next, you'll notice a higher resolution in both text and graphics modes.

The real fun comes in putting the board to work. You'll see soft scrolling, panning and windowing that was never before possible on a PC. And the flicker-free display will allow you to regulate these movements at any speed, or in any direction.

There are 512 characters carried in Spectra's memory that can all

See us at Booth #H7524 at Comdex/Fall.

be displayed at once. Which is twice as many as previously possible on a PC.

And if you wish to use other characters, or even create your own alternate character set, Spectra will support those, too.

More colorful features.

Each Spectra EGA comes fully equipped with a parallel printer port, light pen interface and 256K RAM on the single board. This is especially good news because a full 256K RAM is needed to run most popular graphics software effectively.

One thrilling price.

Perhaps the best news is Spectra's price.

Upon first glance you may find that the Spectra EGA and the IBM EGA seem to be very closely priced. But look again. Because the standard IBM EGA only comes with 64K RAM, whereas Spectra EGA comes with a full 256K.

Now, you may purchase the extra memory board you'll need from IBM at an additional cost of about 70-80 percent. Or you can buy Spectra EGA from Genoa...and rediscover the thrill of a bargain.

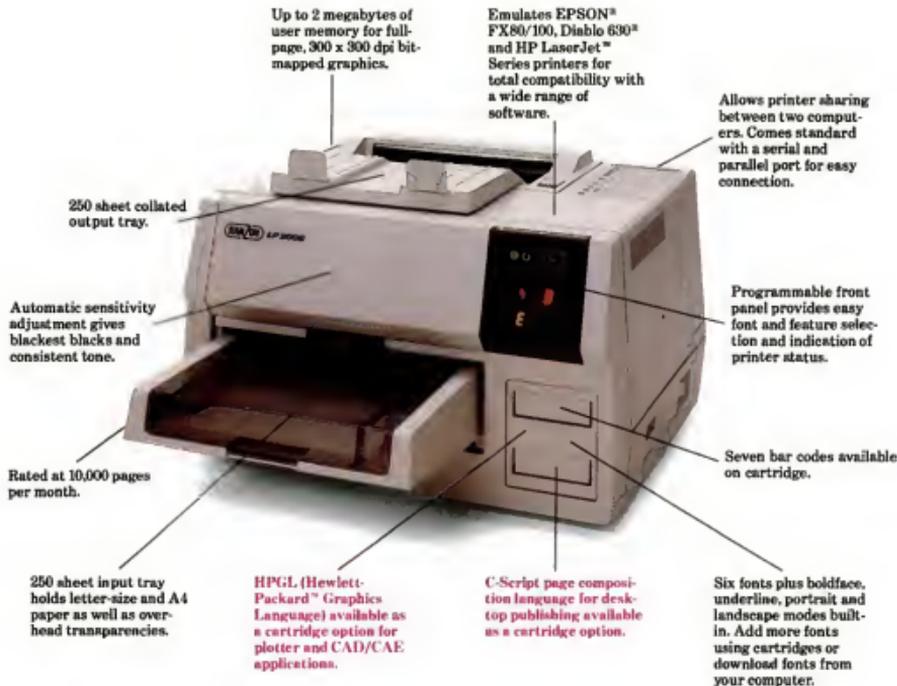

Spectra Enhanced Graphics Adapter

To find out more about Spectra, or a qualified Genoa distributor near you, call 408-945-9720. Or write to Genoa Systems Corporation, 73 E. Trimble Road, San Jose, CA 95131.

Spectra EGA from Genoa. Evolution in color graphics.

Introducing the Hanzon LP3000 Laser Printer. By now you've probably heard how laser printers improve your productivity and the look of your computer printouts. Laser printers are fast. They're quiet. And they produce typeset quality text.

But now there's a laser printer with a difference — the LP3000 from Hanzon. It's so packed with features that your search for the perfect laser printer is over.

The LP3000 is designed to fit painlessly into your existing and future computer systems. With serial and parallel ports and three emulations built-in, the LP3000 works instantly with almost any computer and most popular software packages.

Which means if you're using software like Wordstar®, Microsoft® Word, 1-2-3®, Multiplan® or AutoCAD® — just to name a few — you already know how to use the LP3000. It's as simple as that.

What's more, as your needs grow, so does the LP3000. Add more memory for graphics applications. Add the HPGL vector-to-raster language for plotter compatibility. Add fonts as you need them. In short, choose capabilities you need today without locking out the possibilities of tomorrow.

To find out how much more you can get from a laser printer call Hanzon today at (206) 487-1717. The LP3000 laser printer — a quiet eight pages per minute, and so much more.

AN OLD RESPECTED NAME. A BOLD NEW LOOK.

Computer Mail Order is one of the oldest computer mail order companies in the country. We've succeeded where others have failed, because year after year, we've delivered to you the most product performance for your dollar and given you the attentive service you desire and deserve. This month we launch a new look. We hope you'll find it as easy on your eyes as Computer Mail Order has been on your pocketbook. We also hope you'll do us the honor of calling us C-M-O.

FINE PRODUCTS.

When you call CMO toll-free, you order from a selection of the finest computer hardware, software and peripherals available. More than 5000 items from the best sources in the business (including PC-TOO; the tailor-made clone, direct from CMO!).

FINE PRICES.

Call us. Compare us. Talk to us. We won't hang up. We like talking price as much as we like talking computers.

FINE SERVICE.

We know computers. And we back that product knowledge with our best warranty package ever. And we deliver with next-day shipping on our entire inventory. At CMO, we're committed to keeping you up, running and satisfied.

NO FINE PRINT.

We're CMO. No hot air. No come-ons. No hang-ups. And no fine print. Turn the page. Explore CMO.

CMO. Doing business-to-b

Person to person.

I get calls from corporate buyers all the time. They're usually right about what they ask for, but every now and then, they ask you for something that simply won't work.

One buyer wanted to put an AST Six-Pak in an IBM-AT. It's a nice thought, but it can't be done. So I explained to him why it couldn't be done. I also saved him some money.

When you know your products, you can help people, not just sell them stuff.

"When you know your products, you can help people, not just sell them stuff."

I like to get my nose inside these machines.

When I'm slow, I go back to "service" and help process orders. I help put systems together. You learn it by watching technicians do it. You should see my home system. I put it together myself.

Hey, before you can sell anything well, you've got to understand what makes it tick. You've got to be curious. And you've got to like what you do.

Give me a call. Let's talk computers. Let's talk price.

GET A TAILOR-MADE, 20 MEG, XT-COMPATIBLE FOR AS LITTLE AS \$999.

Presenting PC 100.™ Only from CMO.

When you think of tailor-made, you think expensive, right? Think again.

Now CMO can offer you a 20 Mb PC-compatible—one we assemble in our Pennsylvania lab just for you. To your specifications. With the attention to quality and performance you've come to expect from CMO. All for just \$999.

Every tailor-made clone we make is backed with a full 90-day warranty on labor and parts, a 30 day money back guarantee and easy access to CMO technical support after the sale—the kind that keeps you up, running and satisfied.

For \$999, you get: A 20 Mb, PC-XT compatible that runs thousands of programs, including Lotus 1-2-3™ ■ A 4.77 Mh chip speed ■ An XT chassis with 256K (expandable to 640K) ■ A 20 Mb hard drive ■ A 360K floppy drive ■ A floppy disk and hard drive controller

A 150 watt power supply (not just 130) ■ Open architecture with 8 expansion slots (not just 7) ■ And an 84-key, XT-style keyboard.

Need more power and more flexibility? Call us. Let's talk about your tailor-made PC 100.

Your options are unlimited.

CMO. Policies and particulars.

- Next day shipping on all in-stock items. • Free technical support from our own factory-trained staff! • Toll-free order inquiry.
 - No surcharge on VISA or MasterCard orders. • Credit cards will not be charged until the order is shipped. • No limit and no deposit on COD orders. • No sales tax on orders shipped outside PA. • No waiting period for cashier's checks.
 - **SHIPPING.** Add 3% (minimum \$7.00) shipping and handling on all orders. • Larger shipments may require additional charges.
 - Returned items may be subject to a restocking fee. • All items subject to availability and price changes.
- EDUCATIONAL INSTITUTIONS: 1 800 221-4283**

■ VERSION 3 UPDATES

AUTOMATIC INDEXING Version 3.0 includes automatic index and table of contents generation. Both features require you to use special characters in hidden text (also new for Version 3.0) to specify which elements of your document are to appear in the index or table of contents. Both features work well and quickly and automatically place the results at the end of your document. You can use *Word's* standard format either to modify the formats using direct formatting or to specify style sheet formats using the new reserved paragraph variants.

The index and table of contents features are consistent with the rest of *Word's* design philosophy, but they are not as well thought out as they might have been. You have to use special hidden characters for each, yet there is no predefined key to generate them. You can create your own glossary (*Word's* text macro facility) entries to solve the problem, but this is not the elegant kind of solution I expect from Microsoft. An added fault of the index feature is that there is no option that forces *Word* to automatically locate every occurrence of a word you want in your index—you must mark each occurrence yourself. That could be a problem in applications in which thoroughness, rather than context, is the *raison d'être* for each entry in an index.

Word's hidden text is the best implementation of this feature I've seen. Hidden text is just another character format as far as you're concerned, which means there are no restrictions about where it can appear. You can "unhide" the text at any time, request that *Word* indicate where it is (it uses the horizontal double arrow), or display it on-screen even though it's hidden (it will be marked by a fine dotted line running underneath). Unless you unhide it or show it on-screen, the hidden text won't be printed, and paragraph and page formats will be adjusted to compensate for its absence.

When *Word*, Version 2.0, was released, Microsoft barely had time to get the program to work on IBM's then-new EGA graphics screen. As a result, the program didn't take advantage of the EGA's 43-line format (*Word* has always supported 43 lines on a Hercules Graphics screen). That limitation has been fixed, and *Word* 3.0 will display the smaller but highly legi-

ble characters in either graphics or text mode on an EGA or a compatible graphics system. Unfortunately, *Word* does not allow you to change screen modes from within the program; you have to leave and restart *Word* in order to switch from ordinary (25-line) to 43-line mode.

The autosort and math features are delightful to use and will serve you well if you need to manage tables of information in your documents. To use autosort, you simply define a vertical block of text or numbers containing your "sort key" data, then request autosort to run. Sort options include ascending or descending sequence, alphanumeric or numeric sort, case sensitivity or insensitivity, and defined column-only sort. Each paragraph (presumably one line long in most cases in which you'll use autosort) will be treated as a record and sorted according to the options you select. The exception is the column-only option, which sorts only the defined block and leaves the rest of the line or paragraph alone.

Word's math feature is equally easy to use. Just specify the calculation you want to make by typing it in and defining it in a block. Pressing the F2 key inserts the result into *Word's* scrap (a holding area for text you copy to it or delete), and you can use the Ins key to insert it where you want in your document. *Word* supports the usual operators (+, -, *, and /), with addition as the default for cases in which you supply no operator (handy for columns in which you wouldn't want to type in all those plus signs). If you want, you can hide the operators in a document you intend to update at a later time, rather than delete them. Additional nice touches (*Word's* detail mavens were busy here) are that the program understands standard accounting notation for negative numbers (parentheses around the numbers), correctly recognizes and uses percent signs, and understands the presence of commas in large numbers.

Autosort and math work well with ordinary tables that are defined by tabs, and the result is a decent table manager for business documents. *Word's* ability to handle text columns can also come into play, and table management becomes even more powerful when you add *Word's* new ability to align text columns horizontally. You no longer have to guess where things are

going to land when you want, for example, a single horizontal line of text in the left-most column to line up with the first line of a paragraph on the right in order to serve as a header for that text. Producers of sales or other business proposals, consulting reports, training documents, and some types of scripts will be overjoyed.

A small but attractive touch is date- and time-stamping for *Word* documents. You can insert the current date or time, or the document printing date or time, from *Word's* built-in glossary. Time is indicated in hours and minutes with the PM or AM suffix, and the date uses the full spelling of months. Placement is not restricted; you can put the date and time in a running header or footer or anywhere you choose.

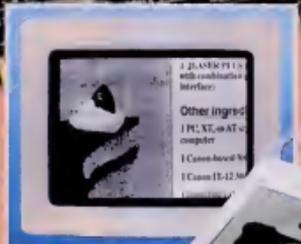

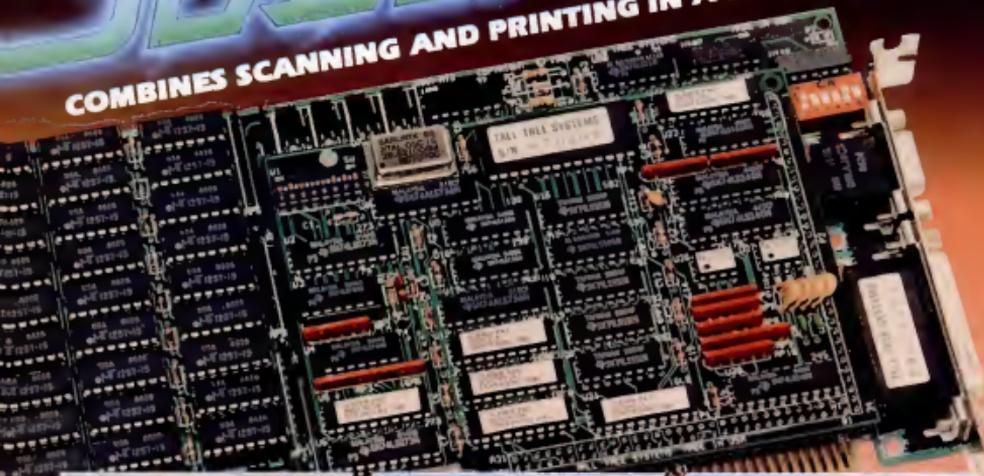

TORTOISE-LIKE SPEED *Word's* biggest weakness has always been its lack of speed, and, while Version 3.0 makes some important improvements, it's still not as fast as it should be. *Word's* screen scroll rate is relatively slow, especially when used with CGA or EGA graphics mode on a standard 8088-driven PC or XT. Things improve a bit if you use a monochrome screen or a color screen in text mode. However, Version 3.0 starts much faster (Microsoft's removal of the copy-protection scheme is mostly responsible for that) and loads and stores files much faster than earlier versions.

Microsoft Word, Version 3.0, is the right product for you if you want a thorough and thoughtful word processor. Its powerful array of features and its accurate printing are also important selling points. Be aware, however, that most experienced *Word* users strongly recommend a hard disk system (although Version 3.0 is much better on floppy disk drives than earlier editions), and that, in my opinion at least, *Word* practically requires an 80286-driven AT or a compatible. Anything less may make you a frustrated user of a great product.—**John Dickinson**

John Dickinson is editor of Computers in Banking and a contributing editor of PC Magazine. Dara Pearlman is a free-lance writer and computer programmer who lives and works in the Silicon Valley. Craig L. Stark is technical editor of PC Magazine.

JLASER PLUS

COMBINES SCANNING AND PRINTING IN A SINGLE BOARD!

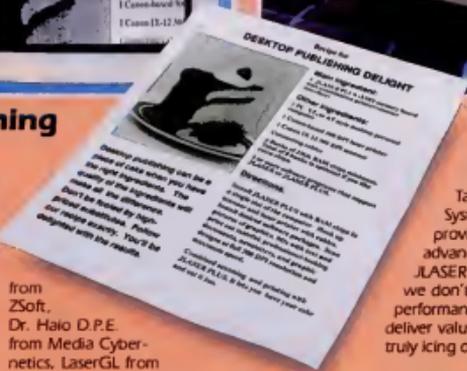

It makes desktop publishing a piece of cake!

Tall Tree Systems introduces another breakthrough in desktop publishing with JLASER PLUS. We've combined a 2 MB EMS memory board and an interface to both a Canon®-based laser printer and scanner. JLASER PLUS increases the performance of both devices and gives you a low-cost solution to the limitations you've been experiencing with them.

Furthermore, the same memory that is made available to your printer and scanner is also available for all your other conventional applications. You get system memory, expanded LIM memory, extended memory in an AT-type machine, RAM Disk and print spooler — all in a single slot!

Supporting JLASER PLUS is a host of software packages, such as PC Paintbrush +

from ZSoft, Dr. Haio D.P.E. from Media Cybernetics, LaserGL from Software Express, Ventura Publisher from Xerox, Page Builder from White Sciences, Le Print from Le Baugh Software, Fancy Font and Fancy Word from SoftCraft, Inc., and

many more to be announced. It takes a technological innovator like

Tall Tree Systems to provide a major advancement like JLASER PLUS. And we don't stop at performance. We also deliver value, which is truly icing on the cake.

Javelin \$99.95

Limited Offer!

Already #2 in Financial Planning!

We've been on the market less than a year, but we're already #2 in the just-published annual PC World survey for the most preferred financial modeling software, ahead of Lotus Symphony and IFPS Personal! Javelin also ranked #2 as the Most Promising Newcomer-Software.

We Intend to be #1

And to do it we are selling 10,000 copies of Javelin for \$99.95 in this special promotion (the suggested retail price is \$695.00). Experience has shown us that once you start using Javelin, your associates will soon follow.

Javelin—Nothing comes close

Proven best by thousands of users in both large and small companies for budgeting, consolidation, reporting, financial planning, forecasting, project costing, and more.

The experts agree with our users. Javelin won InfoWorld's Software Product of the Year Award, PC Week's Most Significant Product of 1985 Award, and PC Magazine's Award for Technical Excellence.

"It's amazing how much time you can save. I can set models up in minutes rather than hours or days using Javelin's innovative and powerful features. If you are using Javelin with time-series data, then the difference in time spent building an application can be as much as 10 to 1 over traditional spreadsheets."

Kathryn H. Wilson, Raychem Corporation

"Javelin was selected for its ease of use in entering and importing data, performing consolidations, defining reports, producing graphs, and automatically debugging models."

Timothy J. Lee, Price Waterhouse

"I must confess to finding Javelin vastly superior for much of what I want to do. I'm doing my income tax on it this year and it is fantastic."

William F. Zachman, International Data Corporation

Order now—Only 10,000 copies will be sold at this price!

Call 1-800-JAVELIN (or 1-617-494-1400) to place your order or to find the name of the Dealer nearest you.

Have your VISA, MasterCard, or American Express card ready. Or send your check to the address below (\$99.95 per copy, plus \$5 shipping for the first copy, \$2 for each additional, Massachusetts customers add \$5 tax per copy). Offer valid in U.S. and Canada only.

Worksheet/Chart Views:

Any product can draw a graph. Only Javelin lets you use graphics to enter data. The numbers appear instantly in your worksheets. You can have as many worksheets as you want, all dynamically linked.

Diagram View:

Only Javelin offers a Diagram View that helps you trace the logic of your model—in both directions.

Formulas View:

Only Javelin has a complete audit-trail facility and notes filing system built-in.

Org Chart:

Javelin's unique Rollup Building Block does hours of multi-department consolidation work in minutes. This chart defines your consolidation hierarchy. Javelin does the rest!

Javelin Software Corporation

MASTER SERIES AT/10

■ PC LAB NOTES: SPEEDING UP BASIC ■ ETHAN WINER

INTERFACING BASIC AND ASSEMBLER, PART 1

In this first of a two-part series, you'll master the basics of the BASIC-assembly language connection and learn about stack operations.

BASIC has always been the most popular language for PCs. It's easy to learn, easy to use, and it usually comes for free. Moreover, if you make a mistake, you can always count on getting a (reasonably) clear error message in English. Lately, however, BASIC has come in for a lot of abuse. Critics complain that it encourages poor programming habits and that it's too slow for serious programming. I'd argue the first point: you can write lousy code in any language. However, there's no disputing that, being an interpreter, BASIC isn't very fast.

In this article, I'll show how to speed up BASIC enormously by adding assembly language subroutines. I'll also present several complete programs that illustrate how to access DOS and BIOS services directly. In the examples shown here, the code bytes will be included as BASIC DATA statements. This allows keeping all of the code within a single program listing. Alternative methods for adding assembly language routines to BASIC are discussed in the sidebar "Ways of Attaching Assembly Language to BASIC."

PUTTING PRtSC TO WORK The best way to see how to merge assembler into BASIC is to start with an example. The PrtSc program below sends the contents of the display screen to a printer from within a running program, just as if you'd pressed the PrtSc key. It works simply by calling an existing routine in the PC's BIOS. All of the BIOS (and DOS) services are accessed by software interrupts, so all PrtSc needs to do is specify the correct

one. The assembler code looks like this:

```
INT 5      call BIOS interrupt 5
RET        return to BASIC
```

Not much to it, is there? Notice how an assembly language subroutine ends with a Return—just as in BASIC. All we have to do now is convert the assembler instructions to their corresponding bytes of code, then read them into the BASIC program. The first part of the program is

```
100 '----- PRtSC.BAS
110 '
120 PRtSC = SPACE(3)
130 FOR X = 1 TO 3
140 READ BYTES
150
160 BIOS(PrTSC,X,1)=CHR$(VAL("AH"+BYTES))
168 NEXT
170 DATA CD, 5, 0
```

■ PRODUCTIVITY INDEX

PC LAB NOTES

Using assembly language subroutines to improve BASIC programs
PROGRAMMING/UTILITIES
 Turn a data disk into a system disk.

SPREADSHEET CLINIC

Print several MultiPlan files at once, and add musical messages to Lotus.

TURBO POWER USER

Initialize variables to zero; better random number handling

USER-TO-USER

PC TUTOR

Adapting games for an AT's speed; exiting assembler programs

At this point in the program, PRtSC contains the instructions necessary to call BIOS interrupt 5 and return to BASIC. The three DATA values come (as we'll see shortly) from the assembler routine. The last step is to find where PRtSC is located in memory, so we can call it when needed. BASIC provides the VARPTR function for exactly this purpose.

```
180 X = VARPTR(PrTSC)
190 PrTSC = PEEK(X+1) + 256 + PEEK(X+2)
200 CALL PrTSC
```

Notice that line 190 seems to introduce an extra step. The reason for this is that when you ask BASIC for the VARPTR to a string, what it returns is the address of a string descriptor. A descriptor is a 3-byte table containing information about the string—that is, its length and address. Therefore, you must skip over the length byte at PEEK(X) to find the address of the actual string data. This address is stored in the 2 bytes at PEEK(X+1) and PEEK(X+2). Observe, too, that memory addresses range from 0 to 65,535 and always occupy one word (2 bytes). The byte at the higher address must be multiplied by 256 to obtain its final value.

Since BASIC often moves strings around in memory while a program is running, it is important always to use VARPTR immediately before calling an assembly language routine. If you needed to call PrtSc several times in a program, you would probably make lines 180 through 200 into a subroutine. That way, no matter where PRtSC happened to be in memory at the time, the correct address would always be called.

■ PC LAB NOTES

FUNCTION CALLS The BIOS provides a dedicated interrupt for PrtSc, but many functions must use the same software interrupt number. You can see how this works by examining the GetDrive program, which retrieves the current default drive. DOS contains a routine that does this, so all you have to do is call DOS appropriately.

Most of the DOS services are accessed through interrupt 21h. But since there are many different services available, you must tell DOS which one to use by placing a *service number* in one of the 8088's registers. AH is always used for this purpose. Likewise, DOS uses these registers to return information to a calling program.

■ You must tell DOS which function to use by placing a *service number* in register AH.

Here are the key components of the GetDrive program in assembly language:

```
MOV AH, 19H ;move* the number 19h into AH
INT 21H ;call DOS to get the drive
```

DOS puts the number of the current drive in the AL register before returning. If the current drive letter is A, then AL will be set to 0; if it is B, AL will be 1, etc. All you have to do now is to take the number in AL and put it into a BASIC variable.

The BASIC CALL command allows passing the address of a variable to an assembly language routine. Since GetDrive returns an integer, it makes sense to pass an integer variable to it. That way, GetDrive can locate the variable and set it to a new value that will indicate which drive is the default. (Whenever a numeric variable is passed to any of the assembler routines in this article, it will be an integer. Floating-point variables and numbers are stored very differently from integers and are much more difficult to work with.)

Variable addresses are passed on the 8088's stack when a subroutine is called. For a fuller explanation of the stack, see the sidebar "How the Stack Works." The

HOW THE STACK WORKS

An understanding of the stack can be one of the most difficult things for beginning assembly language programmers to grasp. But there's really no reason to be confused; it's just another part of the PC's memory. The stack has three primary purposes:

(1) To hold the address to return to when a subroutine has finished.

(2) As a place to pass variables between programs.

(3) For temporary storage of intermediate calculations.

Items are usually placed on the stack with the PUSH instruction and retrieved from it with POP. However, you may also access the stack directly with normal MOV commands. Though the stack is allowed to have its own separate segment of memory, it frequently uses the same segment as do other parts of a program. In BASIC, the stack shares the data segment with your program and its variables. This simplifies the interaction with assembly language programs.

Two of the 8088's registers, the Base Pointer (BP) and the Stack Pointer (SP), are dedicated to addressing the stack. The Stack Pointer always holds the address of the most recently PUSHed stack data and must never be changed by your programs. The Base Pointer may be changed, though only if restored to its initial value before returning to BASIC. This is why programs that need to access the stack's data should always PUSH BP before altering it. Once saved, SP may be moved into BP to get at the variable addresses that have been passed.

To illustrate the stack activity that occurs when an assembly language program is called, let's use GetDrive as an example and trace the chain of events. When BASIC encounters the CALL in

The Status of the Stack Before BP Is PUSHed

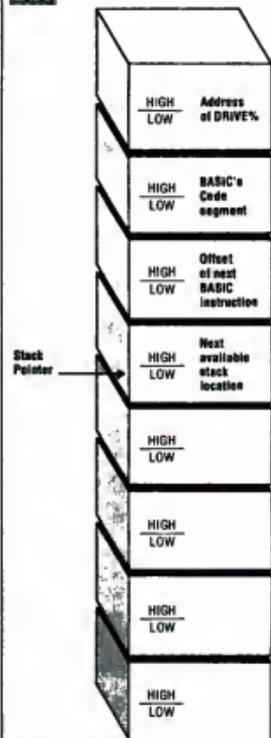

Figure A

stack is an area of memory set aside for this purpose, and one of its attractive features is that programs such as GetDrive don't need to know where it is. By using the Stack Pointer (SP) and Base Pointer (BP) registers, an external routine can locate any

variables included in the BASIC CALL. From within your BASIC program the syntax for GetDrive is simply

```
CALL GETDRIVE(DRIVE%)
```

Just before BASIC calls GetDrive, it

The Stack Grows Downward After BP Is PUSHed

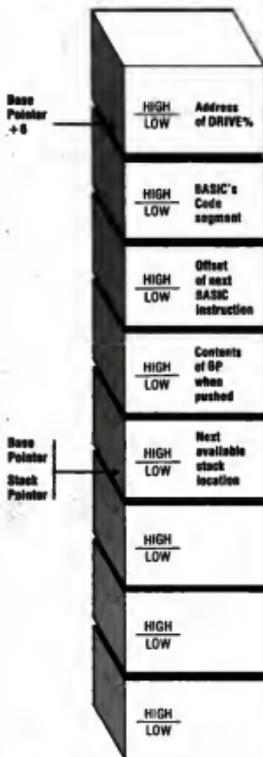

Figure B

your program, the first thing it does is to PUSH the address of DRIVE% onto the stack. It then performs an assembly language call to the address that was specified. For example, if BASIC's data segment happens to be 1200h and the GetDrive routine is located at address 3456h within that segment, then BASIC will execute the instruction

```
CALL 1200:3456
```

The 8088, as part of its own internal handling of CALLs, will PUSH the return address (the next BASIC instruction) onto the stack as well. Therefore, when GetDrive begins there will be three items already on the stack: the segment and offset to return to in BASIC, and the address of DRIVE%.

Each of these items occupies one word (2 bytes). Because of the order in which these words were placed there, DRIVE% will be the third in the list when referenced to the Stack Pointer. But since the first thing GetDrive does is also to push BP, it will be the fourth word when the address of DRIVE% is finally retrieved.

The stack looks as shown in Figure A before BP is pushed. Notice how it grows downward towards lower memory addresses as new items are added to it.

Once BP has been PUSHed (see Figure B) and the Stack Pointer has been MOVED into BP, BP can then be used to get at the stack's data.

When GetDrive has finished, it POPS BP, restoring it to its original value for BASIC. Finally, GetDrive's RET 2 instruction causes the processor to take the segment and address from the stack, adjust SP 2 extra bytes upward to discard DRIVE%, and then return to BASIC.

—Ethan Winer

pushes the address of DRIVE% onto the stack. Figure 1 contains the complete assembly language program showing how GetDrive can find the address.

The first thing any routine that uses the stack must do is to save the Base Pointer

register, though as you can see, it may be saved onto the stack itself. Since BASIC uses BP too, we must be able to restore it before returning. Information is placed on the stack with the PUSH instruction and retrieved from it with POP. Next, the stack's

address is put into BP, and the address of DRIVE% is placed into the SI register for later use.

Since DOS returns the current drive in AL, putting that into the variable DRIVE% would be sufficient, but it's easy to add 65 to AL first. Doing so will convert the DOS drive identifier to an ASCII character, which simplifies things for the BASIC program.

Unlike PrtSc, GetDrive relies on a variable being passed to it through the stack. Consequently, when it returns to BASIC, it must tell the 8088 that the extra word on the stack (the address of DRIVE%) is to be discarded. The last instruction in the assembler routine (Figure 1) specifies that 2

■ Unlike PrtSc, GetDrive relies on a variable being passed to it through the stack.

bytes are to be removed before returning control to BASIC. Had two parameters been passed, the instruction would instead have been RET 4.

The final BASIC program is shown in Figure 2. The DATA lines have been commented to show their relationship to the assembler routine of Figure 1. To use the GetDrive routine from within another program (you don't usually need a standalone program to tell you what drive you're in!), all you have to do is read the DATA statements once near the beginning of your program. Then simply GOSUB to the lines that locate and call GETDRIVE\$ each time it is needed.

ADDRESSING IN ASSEMBLER One important syntactical detail I haven't yet discussed is the difference between designating numbers and addresses in assembly language. Figure 3 shows the same assembler instruction (MOV) with different variations in syntax.

Whenever a number or register is enclosed in brackets, a memory location is being referred to. Otherwise, the value of

■ PC LAB NOTES

WAYS OF ATTACHING ASSEMBLY LANGUAGE TO BASIC

There are several popular methods for combining assembly language subroutines with BASIC, and each has its advantages and disadvantages. Using strings to hold the assembler code, as done in this article, simplifies memory management by keeping the routines within BASIC's data segment. However, it takes space away from your programs and—even worse—by storing all of the code bytes in data statements, it keeps the same information twice. Reviewing the pros and cons of each of the various means through which assembler routines are combined with BASIC may be useful at this point.

The code bytes may be put into a string either of two ways: by reading the

bytes from data statements or by reading them in from disk. Strings have an inherent advantage in that they are comprised of single bytes rather than pairs of bytes, as integers are.

It would be very convenient indeed if a program could simply LINE INPUT the assembler code. Unfortunately, however, whenever a 13 (Carriage Return), 10 (Line Feed), or 26 (^Z, End-of-File) came along, BASIC would not be able to digest it properly. Furthermore, using a string restricts the assembler routines to 255 bytes and requires keeping extra files on the disk, which could complicate things for an end user. Finally, locating the code requires the extra step of first finding the string's descriptor before the

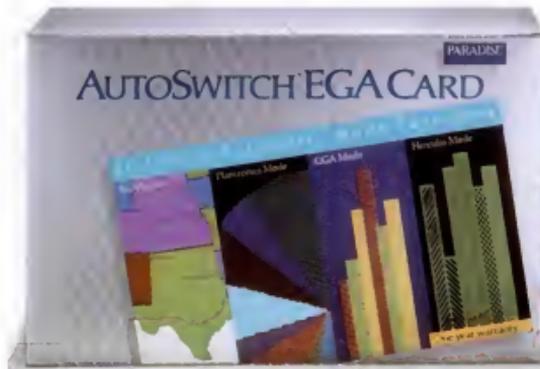

address to call is known.

If strings are to be used with a separate code file on disk, the best approach is to treat the file as random access. This allows reading it in directly after assembly, ignores special values that would confuse BASIC, and steals the least memory. Another big advantage is that the size of the file does not need to be known in advance. A suitable way to read the files would be:

```
10 OPEN "TEST.BIN" AS #1 LEN = 1
20 TEST$ = SPACES(LOF(1))
30 FIELD #1, 1 AS BYTES
40 WHILE X < LOF(1)
50   X = X + 1
60   GET #1, X
70   WIDE(TEST$, X, 1) = BYTES
80 WEND
90 CLOSE
```

Here's What You Ought To Do
To Switch Video Modes Instantly.

You AutoSwitch™

INTEGER ARRAYS Storing assembler code in an integer array is also popular, though some variations are better than others. If you do elect to use an array, don't attempt to assign the elements directly. Since each element in the array occupies 2 bytes, endless calculations will be required to swap the individual bytes around to form the integer words. The example in the back of the BASIC interpreter manual aptly illustrates how awkward this can be.

A better way to use an integer array for storage is either to read the bytes as data statements and POKE them into the array, or to BLOAD a file from disk. Before either POKEing or BLOADing, however, you must ask for the VARPTR to the first element in the array. Also, it is a good idea to issue a DEF SEG com-

mand just before POKEing, in case SEG had been altered earlier in the BASIC program.

BLOADing presents a whole new set of problems for the programmer because you can't just BLOAD anything. BASIC expects the file to have a special header that is normally created when data is BSAVED. Again, the BASIC manual shows how messy BLOADing can be, as it attempts to explain how to simulate this header.

You might think that if strings are not being used, the code won't move around in memory, thus allowing VARPTR to be used only once. Unfortunately, you would be wrong. While it's true that numeric arrays aren't constantly relocated to new addresses every time they are assigned like strings, the sad fact is that

they do occasionally move. The following example illustrates this:

```
10 DIM TEST$(100)
20 X = 0 : BYTES = ""
30 TEST = VARPTR(TEST$(#))
40 DEF SEG
50 FOR X = 0 TO 211
60   READ BYTES
70   POKE TEST + X, VAL("AB" + BYTES)
80 NEXT X
90 DATA 55, 66, 77, 88, . . .
```

Notice how both X and BYTES were preassigned prior to getting the VARPTR to the TEST\$(#) array. To keep everything neat and tidy, BASIC keeps all of its arrays together in one place in memory, immediately following the regular nonarray variables. Even if an array has already been dimensioned, however, assigning a new variable causes BASIC to move all arrays upwards in memory to make room.

—Ethan Winer

Only The Paradise AutoSwitch™ EGA Card Switches Video Modes Automatically.

EGA standard video gives you the best quality color graphics and text you can get on a PC. Crisp, colorful charts and graphs. Sharp, easy-to-read text.

All EGA cards are not created equal. IBMs, and most other EGA cards, won't work with some popular software programs, like Lotus 1-2-3 (version 1.0), that were designed to run in IBM's original color graphics (CGA) or Hercules monochrome graphics modes.

A few EGA cards can run this software. But, they require you to switch video modes manually by flipping switches or by loading a special "configuration" program when you want to switch modes. Major aggravations.

A smarter EGA Card. Computers should do work for you rather than make work for you. That's why we designed the Paradise AutoSwitch™ EGA Card to work with all popular PC video modes, including CGA, Hercules and MDA. It's the only graphics card smart enough to switch to the right video mode, automatically, every time you change programs. So, when you

upgrade to AutoSwitch EGA, you can continue to use your existing software, as well as new programs written for EGA. With no mode switching hassles.

Short is beautiful. The AutoSwitch EGA Card fits into a short PC, XT or AT slot. Our user's manual, called by *InfoWorld* "...the best we've seen for such cards..." is also short.

A full year warranty. Plus, the AutoSwitch EGA Card is made by Paradise Systems, the company that makes more PC video controllers than anyone except IBM. For a demonstration, visit your PC dealer. And see how the most advanced EGA card you can buy is also the easiest to use.

For dealer name, or more information, call toll-free: (800) 527-7977, Ext. 399. In California, (800) 822-2020, Ext. 399.

We make it easy.

Saywhat?! is the newest tool for software designers and programmers. It's the fastest way to create stunningly beautiful screens for programs, prototyping, and slide shows. Saywhat?! is so intuitive to use that even people who have never created a screen before will feel right at home. Yet it has all the performance that veteran programmers want.

Speed! Powerful commands mean *fast* screen design. Create screens quickly and visually in a "what you see is what you get" environment. Then, with one simple command in your program, your screens will all pop up like *magic*. Any program you write will run faster and look better with Saywhat?! screens.

Features! Saywhat?! comes to you rich in screen design features and functions:

- Multi-style lines • Color and monochrome drawing • Walk-about mode
- Automatic box generation • Block copy • Rubber stamping • Block paint
- Block move • Block erase • All color combinations • 16 border colors (CGA)
- Text entry • Blinking • Extended character set • Undo • Print screen
- Direct access to DOS

And since Saywhat?! uses character graphics, your computer can have *any* video card.

Windows! All your programs can have windows and instant help screens, giving them that crisp "Sidekick" feel.

Languages! Saywhat?! screens are "language independent" — they can be used in *any* programming language. Such as dBASE, Pascal, BASIC, C, Modula-2, FORTRAN, and COBOL. Saywhat?! is the perfect companion for the Clipper, WordTech, FoxBase, and QuickBASIC compilers. And screens can be modified without recompiling your code. Saywhat?! even writes clear, concise data entry code for dBASE, Turbo Pascal and BASIC. Slide shows and program prototypes can be arranged with as little as a simple batch file.

Value! We made Saywhat?! affordable with a sensible, even incredible price. \$49.95. That includes a manual, quick reference guide, sample screens, eleven utilities, and technical support. Not copy-protected. No licensing fees.

Guaranteed lightning fast, first class screens. We make it easy. You take the credit.

\$49⁹⁵

3) Mov BX, 90 ;put the number 90 into BX
   Mov SI, [BX] ;put the contents of memory location 90 into SI

```

Figure 3: Syntax for referencing numbers and address contents in assembler.

BASIC	ASSEMBLER
BP = SP	MOV BP, SP
SI = PEEK(BP+6)	MOV SI, [BP+6]
SI = 4	MOV SI, 4
POKE SI, 4	MOV [SI], 4

Figure 4: Analogues between assembler syntax and BASIC PEEK and POKE statements.

that number or register is assumed. The first example in Figure 3 assigns the value 6 to register AX, while the second places the contents of memory location 6 into AX. The third example has two parts: first it puts the value 90 into BX; then it puts the contents of the address whose location is being held in BX into SI. This important distinction is analogous to BASIC's PEEK and POKE (see also Volume 4 Numbers 23 and 24) as shown in Figure 4.

CHANGING DRIVES Now that you've seen how easy it is to read the default drive, let's change it. Again, the BASIC program will call on DOS services to do the real work. The necessary assembly language subroutine is shown in Figure 5. The .ASM listing must be assembled (see sidebar "Assembling the Subroutines") in order to produce the DATA bytes that go into the BASIC program, which is listed in Figure 6. At the assembler end, the DOS

from PDS associates

FREE SOFTWARE LIBRARY & PROGRAMS

PDS associates has assembled over 9000 programs. Our members receive 100 programs FREE of charge, plus an additional BONUS. Other programs are available for as little as 99¢ each. Read on to find out details.

With your membership you will receive a complete listing of all 9000+ programs currently available.

BONUS — 100 FREE Programs from our best selection, with your membership, diskettes included.

Programs include:

- utilities
- basic programs
- assembler programs
- games
- educational
- Data Bases
- communications
- "LOTUS TEMPLATES"

BONUS — Three month FREE subscription to the exciting and innovative "BIG BLUE IN REVIEW". Every month it gives you:

- updates on industry insider news.
- latest public domain software reviews and tests.
- latest results of hardware tests.
- book reviews.
- listing of most recent public domain software
- plus much more.

After you receive your FREE subscription to "BIG BLUE IN REVIEW", FREE 100 programs and listing, **YOU CHOOSE** which additional programs you want at the rates listed below:

■ PC LAB NOTES

ASSEMBLING THE SUBROUTINES

In order to translate assembly language mnemonics (source code) into the appropriate bytes of data (machine code), an assembler of some type is always needed. DEBUG comes for free, but it doesn't allow the use of labels. Consequently, when you use DEBUG, you have to guess at the target addresses of jumps and calls, then perform a "second pass" to fill in the final figures manually. The Macro Assembler does allow the use of labels, but besides having to purchase it, you'll also have to add extra lines to the source code to accommodate its conventions.

Either way, you'll need an ASCII text editor to create the programs. I prefer Borland's *SideKick* because it is always on tap: when the assembler finds an error, I don't have to reload an editor program each time. Besides, *SideKick*'s export facility will send the text directly into DEBUG.

DEBUG Let's step through a DEBUG session that assembles a program I call UPS as a sample. The fully commented assembler version is shown in Figure A, for reference. UPS simply converts any string into uppercase. It's short enough to keep us from getting bogged down with a lot of extra details, but it also contains a few jumps.

The simplest approach is to assemble the routine as if it were a standalone .COM program. Of course it's not, so don't try to run it from the DOS prompt!

A .COM program begins at address 100h within whatever segment it happens to be when it runs. DEBUG knows this and will begin assembling at this address automatically, unless you tell it otherwise. There's nothing wrong with 100h of course, I just mention it so you'll understand why the program doesn't begin at address zero.

To use DEBUG effectively, you will need to learn five key commands: A (assemble), U (unassemble), N (name), W (write), and RCX (register CX). We'll get to that last one in a moment.

Start DEBUG by typing its name, then at the dash prompt press an A followed by Enter. DEBUG will respond with a four-digit segment number (which varies from one PC to another and is irrelevant to our purpose here), followed by a colon and the offset address 0100. (Pressing A alone does not always begin assembling at address 100h, but since we just started DEBUG, DEBUG will assume that's what we wanted.) Now, as shown in Figure A, type each instruction followed by Enter, and DEBUG will provide the subsequent addresses.

```
-a
####:0100 push bp
####:0101 mov bp,sp
####:0103 mov si,[bp+6]
####:0106 mov bl,[si]
####:0108 mov bh,0
####:010A mov si,[si+1]
####:010D dec bx
####:010E js
```

We've now come to the point in the assembler code where the program must jump ahead if the Sign Flag is set. But how can we know where to tell it to jump to? We can't, so we'll simply have to make up a dummy address value. Since the current address is 10E, let's use 130 as a guess.

```
####:010E js 130
####:0110 mov al,[bx+si]
####:0112 cmp al,61
####:0114 jb
```

Here's another jump instruction that needs an address, only this time it's a backwards jump, so the address can be found by looking at what was already entered. The earlier instruction DEC BX was at address 10D, so we know that this

■ The simplest approach is to assemble the routine as if it were a standalone .COM program. It's not, so don't try to run it from the DOS prompt!

will be correct. Also, notice how the hex equivalent was required instead of a quoted "a". DEBUG does allow quoted strings under some circumstances, but it won't accept them here.

```
####:0114 jb 10d
####:0116 cmp al,7a
####:0118 ja 10d
####:011A and al,5f
####:011C mov [bx+si],al
####:011E jmp 10d
####:0120 pop bp
####:0121 retf 2
####:0124
```

```
j-----UPS.ASM
      Push BP                      ;save BP for BASIC
      Mov BP, SP                   ;get stack address
      Mov SI, [BP+6]               ;put descriptor address into SI
      Mov BL, [SI]                 ;put length of string into BL
      Mov BH, 0                    ;must clear BH to use BX below
      Mov SI, [SI+1]               ;put address of string into SI
Next:  Dec BX                       ;point to previous character
      JS  Exit                     ;we passed zero, all done
      Mov AL, [BX+SI]              ;put the current char into AL
      Cmp AL, 'e'                  ;is it less than "e"?
      JB  Next                    ;yes, go on to the next one
      Cmp AL, 'z'                  ;is it greater than "z"?
      JA  Next                    ;yes, skip it
      And AL, 5Fh                  ;clear the "upper case" bit
      Mov [BX+SI], AL              ;poke char back into the string
      Jmp Next                    ;do the next one
Exit:  Pop BP                       ;restore BP for BASIC
      Ret 2                         ;exit decoding string address
```

Figure A: The commented assembler program for UPS.

Once the last instruction has been typed, press Enter alone to get back to the dash prompt. If you look at the code you just entered, you will see that the target of the earlier jump should have been to address 120 rather than 130. The final step will be to go back and patch that one instruction.

```
-al0e
0000:010E js 120
0000:0110
-
```

Now unassemble the entire program, and admire your work.

```
-al00 123
0000:0100 55          PUSH    BP
0000:0101 89E5         MOV     BP,BP

```

The hex bytes between the addresses and the unassembled instructions represent the actual binary code that the 8088 will execute when UPS is run. Now it's up to you to write them down (or import them into *SideKick*) and add them as data statements in a program, as shown in Figure B.

If you prefer to save the program as a disk file and read it into a string, you should save it on a disk instead. To do

this you must tell DEBUG the name of the program, and how long it is.

The easiest way to determine the length is to take the address that comes up just after the last code instruction and subtract 100h from that. Doing this tells us that the code is 24h bytes long.

DEBUG keeps track of a program's length in its CX register, so we'll put the number 24h there. Enter the command RCX as shown, and DEBUG will report the current contents of CX, a colon, and allow you to enter a new value.

```
-RCX
CX 0000
: 24
```

Now the name of the program must be given using the N command.

```
-nups.bin
or
-nb:ups.bin
```

The final step is to enter a W (for write), and DEBUG will take the 24h bytes starting at address 100h and write them to the disk, using the name you specified.

MASM The Macro Assembler is considerably easier to use, especially as programs become larger and use more labels. Also, using DEBUG is clumsy when inserting or removing instructions in the middle of a program, though it can be done.

Since MASM takes a text file as input, making changes is considerably easier. The only drawback is that MASM requires you to give it additional information about the makeup of your program. Further, it doesn't create programs that you can use directly. After a

■ **The Macro Assembler** is considerably easier to use, especially as programs become larger and use more labels, but doesn't create programs you can use directly.

program is assembled with MASM, it must be LINKed, then converted with EXE2BIN. That's sometimes a high price to pay for being able to use labels.

The minimum syntax for creating a program for MASM to assemble is shown below. As you can see, any segments that are used must be identified, and sections of code must be labeled as procedures, showing their beginning and end. Since the programs will eventually be converted to a pseudo .COM format, the instruction ORG 100h, which identifies a program's origin (starting address), should also be included.

Code	Segment	Assume	CS:Code	DS:Code
Upe		Proc	Far	
		Org	100h	
Begin:	Push	BP		
	Nov	BP,SP		
	.			
	.			
	.			
Exit:	Pop	BP		
	Ret	2		
Upe	Endp			
Code	Ends			
	End	Begin		

```

Try It. Then Buy It. PC-Write.

A fast, full-featured word processing package for only \$16. Complete. You get a quick reference guide and tutorial on disk, 45 help screens, choice of function keys or menus, mail merge, spelling check, advanced formatting, and support for over 350 printers including the HP LaserJet Plus.

Try *PC-Write* for only \$16. Then register for \$89 to get:

- o Latest diskette pair
- o Hardbound manual
- o Two updates
- o Phone support
- o Newsletter

Plus, your registration fee supports our development of new *PC-Write* features.

Shareware means you can freely copy and share the *PC-Write* diskette.

Register only if you decide to use it. No risk!

PC
Magazine
Dec 1986

New Version 2.7

50,000 word spelling checker, works as you type or afterward, guesses correct word. Resident Screen Clip feature lets you clip text from other programs.

Order *PC-Write* Today.
Satisfaction Guaranteed.

```

Figure 6: SETDRIVE.BAS incorporates the assembler routine in Figure 5 as data statements.

■ For the benefit of the BASIC calling program, SetDrive will accept as input integer values beginning with 65 ("A").

service to set a new drive is specified by first putting the number 15 (0Eh) into AH, a drive identifier into DL, and then calling interrupt 21h. As with GetDrive, this DOS service also uses 0 to indicate drive A, 1 to indicate drive B; etc., though again, for the benefit of the BASIC calling program, SetDrive will accept as input integer values beginning with 65 ("A" in ASCII). In the BASIC program, to make drive C: the new default drive, you could simply re-

place line 170 with the alternative line
DRIVE% = ASC("C")

(Incidentally, you'll notice that in order to keep these programs simple and to the point, error checking is either minimal or nonexistent. This means, for example, that if someone using your programs attempts to set the drive to "T" on a two-floppy system, DOS will ignore the request and you'll have no way of knowing it. The best solution for SetDrive is to follow it immediately with a call to GetDrive, but using a different variable name. This way, if the two are different, you'll know that SetDrive didn't work.)

The six programs included in the first part of this two-part series have been designed primarily to illustrate techniques. In the next issue, we'll consider some more obviously practical assembler subroutines for your BASIC programs. □

■ PROGRAMMING/UTILITIES

sidebar contains instructions for downloading these files (or the assembled .COM file) by modem from the PC Magazine Interactive Reader Service.

DISKPREP IN ACTION Transforming a nonsystem disk into a system disk is a three-step process that begins by preparing the disk with DISKPREP. The syntax for DISKPREP is simply

DISKPREP [*d* :]

where *d* is an optional drive specifier for use if the target disk is not in the default drive. Up to 44K of free disk space, depending on the version of DOS you use,

■ Transforming a nonsystem disk is a three-step process that begins by preparing the disk with DISKPREP.

are required for SYS.COM to add the two hidden system files. In addition, at least two entries in your disk's root directory must be unused.

If DISKPREP finds that your disk has less than adequate space, it will abort with a message indicating as much. If that happens, delete one or more files to free up some room and try again. If the disk you're prepping is already system formatted, the program will display the message "System already installed - Delete old system (Y/N)?" and await your keypress. If you respond with a Y, the old system will be erased; if you answer N, execution will terminate harmlessly. In the unlikely event that DISKPREP encounters an error condition such as a lost cluster when traversing an allocation chain, it will abort with an "Allocation chain error" message and leave you to your own devices. That's a good time to pull out CHKDSK or one of several commercially available disk maintenance utilities and attempt to salvage the damaged data. Another possible but unlikely occurrence is that DISKPREP will

```

(Figure 1 continues)

find one or more bad sectors in the area of the disk where the system is to be installed. If that happens, the message "Bad sector in system area" is issued and execution is aborted.

Once DISKPREP has finished, you use the SYS.COM program supplied with DOS to install the system on the disk. This simply involves copying a pair of hidden system files from one disk to another and ensuring that they occupy certain areas in the directory and the data space. Fortunately, SYS takes care of that task. SYS's syntax is almost identical to that of DISKPREP and is detailed in your DOS manual. Note that if you try to use the disk after DISKPREP but before SYStemizing,

■ The three steps involved in the SYStemization process are natural candidates for a batch file.

DOS will think that it's dealing with a newly formatted disk and will respond to a DIR request with a "File not found" message. Likewise, using CHKDSK to analyze a disk that has been prepared but not yet SYStemized may produce some strange results. Have faith: as soon as SYS.COM is run, your files will reappear intact and the disk will be ready for use again.

The final step in transforming your disk into a complete system disk is to copy the file COMMAND.COM from your DOS disk to the target disk. This is necessary because, unlike FORMAT/S, SYS does not automatically add COMMAND.COM for you. You simply use the DOS COPY command to perform the transfer, just as you would use it to copy any other file from one disk to another.

The three steps involved in the SYStemization process are natural candidates for a batch file, and to facilitate just that use, DISKPREP terminates with a return code that can be read by the conditional pa-

Backup reasons
for buying the
data cartridge
backup system
now.

You may or may not know the primary, basic reasons for choosing data cartridge technology for your backup.

It's easier to handle than big disks or boxes of floppies.

It stores more than any other method on your PC. Up to 150 megabytes in 5 1/4 inches of space.

It costs less per formatted megabyte of storage than any other removable mass storage for the PC user.

And most importantly, data cartridges have unsurpassed reliability over other media.

Relying on a second hard disk to do your backup, for example, is putting your faith in a medium that is famous

for losing data. Whether it's caused by operator error (of which there are many) or the fickle finger of fate, crashing is what hard disks do—what created the problem in the first place.

The tough plastic cover protects the tape from problems that can occur with floppies.

A metal plate prevents tape alignment problems that can cause slipping and jamming. A problem that can cause data loss in cassettes.

But if you act before December 31, 1986, there are some other, alternative reasons for joining the data cartridge club:

A free cartridge from 3M if you buy your hardware from one of the participating manufacturers.

And your choice of a wide range of rebates or other special offers from those manufacturers.

For a free 16-page buyers guide detailing these offers, you can call (800) 835-2246 ext. 260. (In Kansas call (800) 362-2421 ext. 260.)

Or better still, just amble on down to your computer products retailer to see who's offering what.

And get your backup system while the gettin's good.

■ PROGRAMMING/UTILITIES

parameter ERRORLEVEL. If the disk prepping process was successful, ERRORLEVEL is set to zero. If the prepping process was not successful for any reason, DISKPREP executes its normal abort routine complete with a message revealing the nature of the error and sets the ERRORLEVEL return code to 1. A suitable batch file (you might call it SYSTEM.BAT) is listed below. It assumes that the program disk is in the default drive and that the target disk is in drive B:

```
DISKPREP B:
IF ERRORLEVEL 1 GOTO END
SYS B:
COPY COMMAND.COM B:
:END
```

DISKPREP works on floppy disks of the 40-track variety with one or two sides and eight or nine sectors per track. This

■ If the prepping process was not successful, DISKPREP aborts it with a message revealing the nature of the error.

covers all four 5¼-inch disk formats supported by versions of DOS prior to 3.0 but excludes hard disks, high-capacity (1.2-meg) floppies like those used by the AT, and the 3½-inch disk cartridges used by a number of laptop portables. Attempting to process one of the latter types of disks isn't harmful: the program will quickly recognize the unsupported format and abort with an "Illegal disk format" message. If reader demand is sufficient, I'll work out the code for these formats later.

Two cautions are in order. First, do not use DISKPREP on a disk that contains subdirectories. While sometimes subdirectories will not interfere with the reallocation process, at other times their presence may cause an "Allocation chain error" message, prevent existing system files from being deleted (resulting in the error message "Cannot delete system files"), or

```

MICRO CAP and MICRO LOGIC put your engineers on line... not in line.

MY OWN WORKSTATION

How many long unproductive hours have you spent "in line" for your simulation? Well, no more. MICROCAP and MICROLOGIC can put you on line by turning your PC into a productive and cost-effective engineering workstation.

Both of these sophisticated engineering tools provide you with quick and efficient solutions to your simulation problems. And here's how.

MICROCAP: Your Analog Solution

MICROCAP is an interactive analog circuit drawing and simulation system. It allows you to sketch a circuit diagram right on the CRT screen, then run an AC, DC, or Transient analysis. While providing you with libraries for defined models of bipolar and MOS devices, Opamps, transformers, diodes, and much more, MICROCAP also includes features not even found in SPICE.

MICROCAP II lets you be even more productive. As an advanced version, it employs sparse matrix techniques for faster simulation speed and larger net-

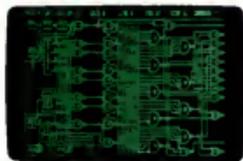

"Typical MICROCAP Transient Analysis"

works. In addition, you get even more advanced device models, worst case capabilities, temperature stepping, Fourier analysis, and macro capability.

MICROLOGIC: Your Digital Solution

MICROLOGIC provides you with a similar interactive drawing and analysis environment for digital work. Using standard PC hardware, you can create logic diagrams of up to 9 pages with each containing up to 200 gates. The system automatically creates the netlist required for a timing simulation and will handle networks of up to 1800 gates. It provides you with libraries for 36 user-defined basic gate types, 36 data channels of 256 bits each, 10 user-defined clock waveforms, and up to 50 macros in each network. MICROLOGIC produces high-resolution timing diagrams showing selected waveforms and associated delays, glitches, and spikes—just like the real thing.

"Typical MICROLOGIC Diagram"

Reviewers Love These Solutions

Regarding MICROCAP... "A highly recommended analog design program" (PC Tech Journal 3/84). "A valuable tool for circuit designers" (Personal Software Magazine 11/83).

Regarding MICROLOGIC... "An efficient design system that does what it is supposed to do at a reasonable price" (Byte 4/84).

MICROCAP and MICROLOGIC are available for the Apple II (64k), IBM PC (128k), and HP-150 computers and priced at \$475 and \$450 respectively. Demo versions are available for \$75.

MICROCAP II is available for the Macintosh, IBM PC (256k), and HP-150 systems and is priced at \$895. Demo versions are available for \$100.

Demo prices are credited to the purchase price of the actual system.

result in a damaged file allocation table. Fortunately, there's little use for tree-structured directories on a floppy, anyway, so this limitation is not too serious. Second, it's risky to try to prep a copy-protected disk, since many copy protection schemes alter the disk format. DISKPREP should work with any current release of DOS but may or may not be compatible with future versions.

SYSTEMizing a disk can be a tricky proposition even for DOS. If you run SYS.COM on a nonsystem disk that isn't empty without first running DISKPREP, SYS will usually respond with a "No room for system on destination disk" message. In some cases, however, SYS may appear to add the files successfully, though you'll find that the disk won't boot even though SYS apparently succeeded. So, check any disk you SYSTEMize by booting your PC

It's risky to try to prep a copy-protected disk, since many copy protection schemes alter the disk format.

with it. If you have a disk with an improperly installed system, DISKPREP can be used to correct it. The program's ability to delete system files works just as well with a faulty system as with one added properly. I have found that even DISKPREP will sometimes fail if you delete a system installed under DOS 3.1 and resystemize with the DOS 2.1 version of SYS. If you encounter this problem, don't despair: DISKPREPping the disk a second time and running DOS 3.1 will restore it unharmed. There seem to be no problems with replacing system files with a system of the same version of DOS or later, which is the normal requirement.

DOS FILE MANAGEMENT One task of an operating system is organizing information on disks so that each individual file is allotted its own space and cannot be ac-

identally overwritten by another file or otherwise destroyed. Since some knowledge of the logical structure of a disk is essential to understanding the workings of DOS, let me begin by hitting the high points of disk organization. Keep in mind that our discussion pertains only to floppy disks and not to fixed disks.

Versions of DOS through 2.1 supported only four different types of floppy disks: single-sided with eight or nine sectors per track (S-8 and S-9, respectively), and double-sided with eight or nine sectors per track (D-8 and D-9). Each disk comes from the manufacturer physically divided into 40 magnetic tracks of storage space, and when we format the disk each track is subdivided into a specified number of 512-

■ The smallest unit of disk space that can be allotted to a file or a portion of a file is called a cluster.

byte sectors. A double-sided disk with nine sectors per track (the usual 360K DS/DD disk) has 720 sectors (two sides times 40 tracks per side times nine sectors per track). All but a small portion of this space is available for file storage. The rest is taken up by the disk directory, the boot record, and the heart of DOS's file management system, the file allocation table, better known as the acronym FAT.

The smallest unit of disk space that can be allotted to a file or a portion of a file is a cluster, which is a logical grouping of one or two sectors, depending on the specific format of the disk. On a 360K disk, a cluster comprises two consecutive sectors, and there are 354 clusters (numbered 2 through 355) available for data storage. The number of data clusters that are available for file storage is determined by the overall capacity of the disk and by the length of the directory and file allocation table. Since no unit smaller than one cluster can be allocated, a file only a few bytes in length will

Figure 2: A BASIC program that will create DISKPREP.COM.

up an entire cluster of disk space.

When DOS gets a request to put a new file on a disk, it searches through its list of data clusters looking for those that are unused and can be assigned to the new file. The file is then written to the disk, one sector at a time, and a 32-byte entry is put in the disk directory. The directory entry contains the filename, the file attributes, and such other important parameters as the date and time the file was created. Prior to DOS 3.0, clusters were allocated on a first-come, first-served basis; that is, the search for available clusters started at the very first data cluster and proceeded sequentially until one cluster was assigned for each one needed by the file. Since file deletions usually leave pockets of empty clusters in the midst of a span of used ones, long files

■ The FAT is a table of entries—one for each data cluster—that keeps a record of the status of each cluster.

on a much-used disk are rarely stored in contiguous sectors. (This is what it means to speak of files as "fragmented.") Later versions of DOS are more selective in choosing clusters, but they still don't necessarily place all clusters belonging to a given file together.

Obviously, if the operating system is to manage disk space and maintain the integrity of the information stored there, it must have some sort of road map to know which clusters are used by which files in what order. That road map is called a file allocation table. Each FAT occupies either one or two sectors, and it always begins in the second sector, immediately following the boot record. DOS considers this table so important that it keeps two copies on every disk.

The FAT is a table of entries—one for each data cluster—that keeps a record of the status of each cluster. If the FAT entry for a cluster is zero, then that cluster is un-

1-2-3 DATA

NEXT STEPS:

1. BUY REPORT WRITER FROM LOTUS. (IF WE DON'T LIKE IT, WE GET A REFUND)
2. MAIL THIS COUPON

LET'S TRY THEIR FREE DEMO DISK!!

You already know how valuable your 1-2-3® or Symphony® data is.

But what if you need your data on paper? In a specific form? Fast? Lotus has the answer.

It's called 1-2-3 Report Writer.™ It lets you easily format and print customized reports, presentations, and pre-printed forms. So you can generate monthly status reports. Weekly sales analyses. Presentation-quality financial reports. Claim forms and invoices. Even mailing labels.

And Lotus-like commands and simple prompts mean you can get started right away.

The cost? Just \$150.

And you can try 1-2-3 Report Writer for 30 days without obligation. If you don't like it, send it back.

We'll refund your money.

What's more, we'll even send you a free demo disk. So you can see how 1-2-3 Report Writer will help you make your data do more.

To take advantage of either offer, just complete and return the coupon below. Or call 1-800-345-1043.

Lotus 1-2-3 Report Writer

A Lotus companion for reports, forms, and mailing labels

Complete and mail to: Lotus Development Corporation, Atlanta, Georgia 30390-0370

To order by phone, call 1-800-345-1043

Send me my FREE demo disk (Q# 11993)

Send me 1-2-3 Report Writer for \$150.*

Payment: VISA MasterCard

Money Order Check (Q# 1229)

■ PROGRAMMING/UTILITIES

used and available to be claimed by a new file. If the entry is between FF0 and FF7 hex, inclusive, then that cluster has been reserved by DOS, usually meaning it was marked "bad" during the formatting process. Any other number in an entry means that the cluster is in use and, more important, the number itself indicates the number of the next cluster in the allocation chain.

Suppose, for example, that the operating system wants to find room for a file that will take up three clusters and that a search for available clusters finds that clusters 5, 10, and 11 are the first three currently unused. When the file is saved to disk, DOS will set the FAT entry for cluster number 5 to 10, indicating that cluster 10 holds the next portion of the file. Following the

■ The starting cluster is recorded at offset 26 in the file's directory entry, in the form of a single word.

same logic, the FAT entry for cluster number 10 will be 11, and the entry for cluster 11 will be FFFh, which is the number always used to mark the last cluster in the chain. As you see, a chain of data clusters has been mapped in the FAT and the clusters don't have to be contiguous.

How does DOS know which cluster is the first in the chain (cluster number 5 in this case)? The starting cluster is recorded at offset 26 in the file's directory entry, in the form of a single word stored in low-byte/high-byte fashion. Thus a complete record of storage space allocated to each file is stored in the FAT and in the directory, and, by reading the map, DOS can write, read, delete, and in other ways manipulate files to perform the functions that we commonly require.

Odd though it seems, for reasons of efficiency use of disk space each FAT entry is 12 bits in length—halfway between an 8-bit byte and a 16-bit word. Thus two FAT

PC MAGAZINE LEADS YOU OUT OF THE INFORMATION JUNGLE...

Exploring the PC market is a confusing, and often risky, endeavor.

Lose your way, and you lose valuable time. One wrong turn, and you can lose lots of money.

That's why IBM and compatible PC users look to *PC Magazine*. *PC Magazine* eliminates the risk in purchasing decisions with comparative reviews and product evaluations from the PC Labs, where products are tested the way you use them every day. It's the pathfinder to products that meet your specific needs—and those of others in your company.

PC Magazine puts you on the trail to new applications with power tips and special reports that will help you make the most of your system.

PC Magazine goes one step beyond leading you through the microcomputing jungle. *PC* leads you *out* of the jungle to the PC environment that meets your daily demands.

(Figure 2 ends)

entries are stored in 3 bytes in a manner that might seem convoluted to a non-programmer but that lends itself well to assembly language interpretation using bitwise shifts and logical operators. The two subroutines GET_FAT_ENTRY and PUT_FAT_ENTRY in the DISKPREP source listing illustrate how 12-bit FAT entries can be read and written.

DISKPREP IN DETAIL DOS imposes several specific restrictions on a system disk. First, the disk must contain the hidden files IBMBIO.COM and IBMDOS.COM. Second, these two files must use the first two entries in the directory. And third, IBMBIO.COM must occupy contiguous sectors, beginning in the first cluster in the data space. That's why SYS.COM

won't work on a disk that already has other files on it: when the first file is stored, it is given the first cluster and the first directory entry—the same areas needed by IBMBIO.COM—and SYS isn't smart enough to rearrange the disk to make room. That's where DISKPREP comes in. DISKPREP rearranges the disk to ensure that the two hidden files can be placed in the areas where they must reside in order to function properly.

DISKPREP begins by parsing the command line for a drive specifier. DOS makes the text of the command line available from within an application by placing it in memory beginning at offset 81h in the program's entry-level data segment. Offset 80h holds the length of the line. If no drive is specified, DISKPREP uses DOS function call 19h to get the default drive

■ DISKPREP rearranges the disk to ensure that the two hidden files can be placed in the areas where they must reside.

and thereafter uses the default as the target drive. The drive identifier, whether input explicitly or by default, is checked, and execution terminates if something other than drive A: or B: was specified. This provides one measure of assurance that DISKPREP won't try to reallocate space on a hard disk.

Having verified the drive, DISKPREP calls DOS function 1Ch to get the address of the FAT identification byte, which indicates the disk format (S-8, S-9, D-8, D-9, or other). Each disk format has a unique number of available data clusters and locates the FAT, the directory, and the data space in different sectors, and DISKPREP needs to know what kind of disk it's working on. Peter Norton's *Programmer's Guide to the IBM PC* (Microsoft Press, 1985) gives an excellent account of these specifics. If the disk format is one of the four supported by DISKPREP, then addi-

NOTHING DOWN.

Even the best of personal computers can have a bad day. Blackouts happen. Usually at the worst possible time.

But power interruptions don't need to be business interruptions. And lost power shouldn't result in lost data. Not with the POWERMAKER[®] Micro UPS from Topaz.

Designed specifically for hard disc and critical-use business systems, Powermaker Micro UPS ensures a continuous supply of smooth sine wave power even during

a total blackout.

And there's more. Powermaker Micro UPS also removes spikes and other error-producing transients from incoming power, protecting your PC's sensitive circuitry.

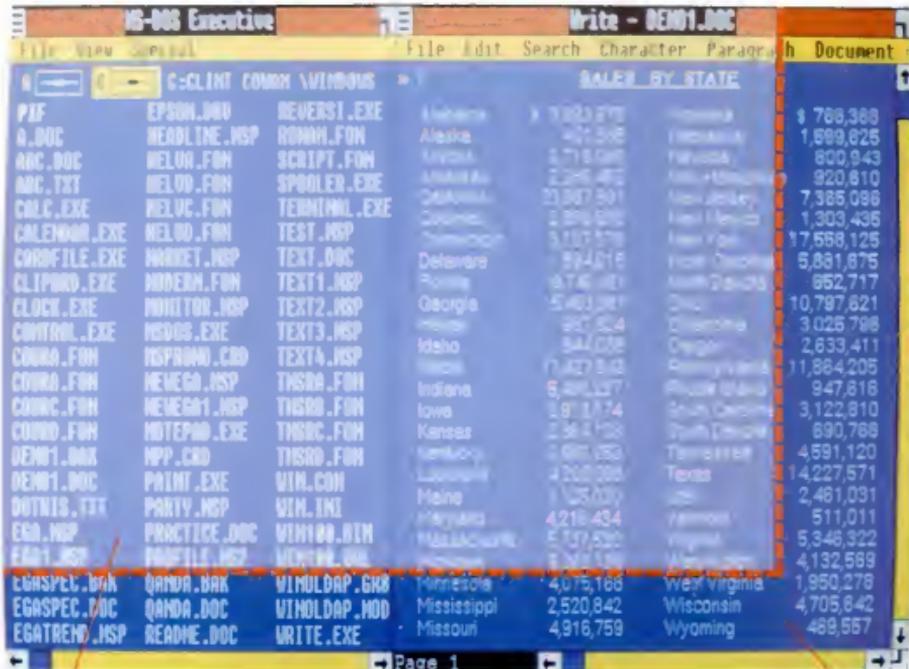

So, if your PC needs a little help once in a while, give it Powermaker Micro UPS protection. For nothing down. Call us today at (619) 279-0831, or contact your local Square D distributor.

CIRCLE 366 ON READER SERVICE CARD

How to use 137% of your Multisync monitor.

With a standard EGA

QuadEGA ProSync™

With QuadEGA ProSync

QuadEGA ProSync takes full advantage of your Multisync monitor by delivering two additional enhanced graphics modes: 640 x 480 and 752 x 410. The

ultra sharp resolution lets you comfortably fit up to 37% more data on your screen in 16 bright, solid colors with crisp detail.

That means you get more text and more graphics. The end result is increased productivity. Because, not only can you work with more data, it's easier to read, too.

Featuring AutoSelect™

It's easy to run your favorite programs with QuadEGA ProSync. Our AutoSelect feature automatically selects the correct display mode for most software.

Together with your Multisync, QuadEGA ProSync delivers the leading edge technology that lets you make the most of desktop publishing, presentation graphics, and software that works best in the ultra high resolution mode.*

Now you have a choice - QuadEGA+ and QuadEGA ProSync

Quadram makes the world's best-selling EGA boards. QuadEGA+ gives you compatibility with the four PC display standards. And to take advantage of Multisync-type monitors, QuadEGA ProSync gives you two additional high resolution modes.

To find out more about our complete line of EGA products, contact us at One Quad Way, Norcross, Georgia 30093. Or call 404-564-5566.

QuadEGA ProSync delivers a host of six graphics modes!

■ PROGRAMMING/UTILITIES

tional parameters returned by function call ICh, such as the number of sectors per cluster, are stored. DISKPREP stores other disk format data it needs at its FORMAT_TABLE label. That information defines the length (in sectors) of the FAT and the directory, and gives the maximum number of directory entries.

Copies of the disk's root directory and FAT table are then read (via interrupt 25h) into memory at the locations specified through the routines labeled DIR_DATA and FAT_DATA. DISKPREP makes all its changes in the disk's FAT and directory on these memory images and only then writes the modified images back to disk. Thus, should the program encounter an unrecoverable error midway through the reallocation process, it can abort without scrambling the actual disk's FAT and directory entries. Note that FAT_DATA and DIR_DATA are not the actual locations where the memory images are stored. Rather, they are pointers to the holding areas and thus serve the same function as do pointer variables in Pascal and C. This way of structuring the program saves space by placing the noninitialized data areas out in the code segment beyond the last byte of code.

DISKPREP next looks at its memory image of the disk's directory to see if the first filename in it is IBMBIO.COM. If it is, the program assumes that it's dealing with a disk already containing the system and asks the user whether the old system files are to be deleted. If so, the files are deleted with DOS function 41h. Since that function won't delete a file whose read-only bit is set (bit 0 in the attribute byte),

■ **DISKPREP checks that enough clusters are unused to hold the 50K (maximum) of system files that will later be transferred by SYS.**

DOWNLOADING DISKPREP

The programs that appear in our Programming/Utilities column (as well as other programs we publish) can be downloaded by modem from the PC Magazine Interactive Reader Service. There is no charge for this service, but users are cautioned that these programs are copyrighted material and are made available only for individual, noncommercial use. Making copies for others (including placement on other electronic bulletin boards), with or without charge, is a violation of the Ziff-Davis copyright.

The modem number for PC-IRS is (212) 696-0360. Set your modem and communications software to use 1,200 (or 300) bps, 8 data bits, 1 stop bit, no parity. PC-IRS files with a .COM, .EXE, or .ARC extension require that

you also use the Xmodem error-checking protocol; our other files (e.g., with extensions of .ASM or .BAS) can be downloaded using either regular ASCII or Xmodem transmission.

DISKPREP.BAS, whether typed in from the magazine at your keyboard or downloaded from PC-IRS, will automatically create DISKPREP.COM when run once in BASIC. DISKPREP.ASM, also listed both here and on PC-IRS, allows you to modify the program but requires you to use a macro assembler (IBM or Microsoft) and the following commands:

```
MASK DISKPREP;
LINK DISKPREP;
EXECBIN DISKPREP DISKPREP.COM
```

—Craig L. Stark

DISKPREP AT A GLANCE

Syntax:

```
DISKPREP [d:]
```

Operation:

DISKPREP rearranges the files, directory entries, and FAT on floppy disks designed to hold up to 360K to permit

retroactively adding the DOS system files. Sufficient room is provided for DOS versions up through 3.2. After running DISKPREP, use the DOS SYS command to copy the system files to your target disk, and complete the process by COPYing COMMAND.COM from your DOS disk.

DOS function 43h is called to change the file attributes from 27h to zero. After the old system files are deleted, the updated FAT and directory are reread.

The final check before reallocation begins is a check of free disk space. DISKPREP calls DOS function 36h to check that enough clusters are unused to hold the 50K (maximum) of system files that will later be transferred by SYS.

REARRANGING THE DISK On a system disk IBMBIO.COM and IBMDDOS.COM must occupy the first two directory entries, in that order. SYS will transfer the two files only if those two entries are unused. DISKPREP begins the restructuring process by checking each of the first two

directory entries and, for each one that's currently in use by another file, copying the 32-byte entry to the first available entry slot and marking the old one available. The availability of an entry can be determined by checking its first byte. If that byte is zero (indicating that the entry has never been used) or if it's 0E5h (which marks an erased file), then the entry is available. Any other value is the first character in a filename and, at the same time, indicates that the entry is in use.

If an entry must be moved, the program calls the subroutine FIND_ENTRY to scan the directory image for the first available slot. MOVE_ENTRY then copies the 32 bytes from one area to the other. Before handing control back to the main program,

■ PROGRAMMING/UTILITIES

MOVE_ENTRY marks the old entry available by setting its first byte to zero. This is why DOS answers a DIR request before SYS is run with a "File not found" message: DOS knows that directory entries are allocated in sequential order starting with the first, so when it finds the first entry marked as never having been used, it "knows" there are no other files on that disk. As soon as SYS transfers the system files so that the gap in the directory is filled, DOS will once again recognize the presence of the other files. (If we were to mark the first two entries available with the value 0E5h rather than zero, DOS would see our files even before SYS was run. But for reasons unknown to me, SYS will sometimes, but not always, refuse to add the system if each of the first two entries is not marked as "never used.")

The second system disk requirement is that the file IBMBIO.COM occupy an uninterrupted string of sectors, beginning in the disk's first data cluster. There are no such requirements for IBMDOS.COM. In DOS 2.1, IBMBIO.COM was 4,736 bytes long; in DOS 3.2, the length has risen to 16,369 bytes. To ensure it will work with any current release of DOS and with each supported format, DISKPREP rearranges the disk so that the first 40 clusters are free. That number more than takes care of the worst case, in which 32 clusters of one sector each are required to add the DOS 3.2 version of IBMBIO.COM to a single-sided disk. The additional margin will hopefully provide enough of a cushion for DISKPREP to work with future versions of IBMBIO.COM. Once the first 40 clusters are marked available, SYS will successfully perform its appointed mission and transform the nonsystem disk into a systemized one.

To free up these first 40 data clusters, DISKPREP repeatedly executes a series of instructions. Beginning with cluster number 2 (the first data cluster), the memory image of the cluster's FAT entry is pulled out to determine whether the cluster is used or available. If the FAT entry is zero, then it's available and the cluster need not be moved. If the entry is FF0h-FF7h, then the cluster is bad and the program aborts with a "Bad sector in system area" message. If the FAT value is neither of these, the cluster is in use and will have to be

moved, so the process continues.

The FAT entry just acquired is tucked away to be recalled momentarily, and the subroutine FIND_CLUSTER is called. This routine searches sequentially through the data clusters starting just beyond the first 40 and returns the number of the first available one. The MOVE_CLUSTER subroutine then copies the contents of the old cluster into the newly found one. Next, the FAT entry for the old cluster (which was saved a short time before and indicates which cluster is next in the allocation

■ DISKPREP rearranges the disk so that the first 40 clusters are free, providing a cushion for DISKPREP to work with future versions of IBMBIO.COM.

chain) is retrieved and inserted into the FAT as the entry for the new cluster. The entry for the old cluster is then zeroed, marking it unused.

COMPLETING THE CHAIN The final remaining task is to find the FAT entry or directory entry that references the old cluster and change it to reference the new one. Remember that every used cluster is part of a chain, and that each link must be pointed to either by another FAT entry or, if it's the first cluster in a chain, by the starting cluster word in a directory entry. To accomplish the task, all FAT entries are scanned for a value that matches the old cluster number, and if one is found, it is changed to the value of the new cluster. If one is not found, then the subroutine SEARCH_DIR is called to check the root directory for a reference to the cluster, and the reference is changed if found. If the reference is found in neither place, then either the old cluster is a lost cluster—one that is marked as in use but isn't addressed elsewhere in

the FAT or directory—or the cluster is referenced in a subdirectory rather than in the root directory. In either case, DISKPREP aborts with an error message.

(The reason DISKPREP can't handle disks with subdirectories is that the program assumes that a valid reference is contained in the root directory if it can't be found in the FAT. If a disk contains subdirectories, however, the reference may in fact be in a subdirectory. Accessing a subdirectory presents additional considerations from a programmer's standpoint since it is stored as a file.)

Assuming no problems are encountered, then with one iteration of the process completed, execution loops back to the start and begins examining the next of the first 40 clusters.

When all the needed clusters have been cleared, DISKPREP writes the updated directory and FAT back to disk, taking care to change both copies of the FAT maintained there. Exit is achieved through DOS function call 4Ch so that an ERRORLEVEL code can be returned. To that end, the program is structured so that all critical error exits are routed through a section of the code labeled ERROR_EXIT, which beeps, prints a message whose address is specified in DS:DX, and sets ERRORLEVEL to 1 prior to exit. A successful completion to DISKPREP returns an ERRORLEVEL value of zero and prints the message "System prep completed."

IN CLOSING DISKPREP is, I believe, a utility that will make your interactions with your PC a little more pleasant. Understanding how it works has, I hope, removed some of the mystery that seems to enshroud DOS's file allocation table and other elements of the file management system. Be aware that any program, no matter how extensive its testing and use, may fall prey to hidden bugs or anomalies. [One user has cautioned that ProKey should not be loaded in advance of using DISKPREP, for example—Ed.] It's always prudent to keep backup copies of important files and disks. But when you need to add a system to a disk in use, DISKPREP's the easy way to go. ☺

Turn Your PC into a Typesetter

FREE WYSIWYG SOFTWARE

TYPE EXPRESS CUSTOMERS GET FREE TYPE PROCESSING SOFTWARE.

The Express Type Processor is a sophisticated WYSIWYG software package that lets you specify and preview typesetting on your IBM PC.

Type Express is a commercial typesetting service that distributes the Express Type Processor as a service to its customers.

With Type Express you can use your PC as a sophisticated desktop publishing workstation - without making expensive hardware or software commitments.

WYSIWYG, What-You-See-Is-What-You-Get is the key to the Express Type Processor. You see everything on the screen as you do it. Change type size, line spacing, column width-anything you like-and the results immediately.

Overwhelming Features. Compare the features of the Express Type Processor with other PC typesetting software.

Justification. Automatic hyphenation and kerning. Adjustable line, word, and letter spacing. Features that aren't often found on PC based packages, regardless of cost.

Galleys or Pages. Only the Express Type Processor lets you produce either galleys or pages. You can preview and set type on a traditional continuous galley.

Or layout complete pages. Define multiple columns with cut-outs or ragged edges. Produce multiple page documents. Text will automatically flow whenever you specify. And the number of columns, pages, or the amount of text are only limited by your system's memory.

Integrated Editor. Adding or changing text or specifications is a snap with the built-in editor. Enter text directly from the keyboard, or read in an ASCII file produced by any popular word processor. Then watch it flow into your page. Now use the full-featured editor to make changes. Search and Replace text. Use macros or callouts to quickly change formats throughout your document.

Easy to Use. The Express Type Processor couldn't be easier to use. You select specifications from drop-down menus so there are no complex codes to learn. On-line prompts guide you through all operations. Complete typographic control is built-in, so you don't have to be a typographer to produce professional-looking results.

Hardcopy Proofs. Ready for a printout? Your dot-matrix printer will produce an accurate hardcopy proof at the touch of a key.

Automatic Communications. Done? The built-in communications software dials the Type Express WATTS line, establishes communications, and transmits your document. CRC error checking ensures complete accuracy, of course.

Professional Typesetting. Your document is typeset on a high performance phototypesetter with resolution of over 1200 dots per inch. Top quality RC photographic paper ensures sharp contrast and stability.

Fast Service. All orders are shipped within 24 hours. Specify optional Priority Service, and your order is shipped the same day by overnight express - so you have your finished typesetting the very next morning! **Economical.** Complete typeset pages are just \$10 each. Gallies are \$10 per foot. A charge of \$10 per order covers standard shipping and handling. And since the WYSIWYG software ensures that your job is right the first time, you eliminate the added costs of revisions and corrections.

No Special Equipment. Use the Express Type Processor on any PC/XT/AT or compatible with 256KB of memory and a color or Hercules graphics card. Print out hardcopy proofs on any IBM or Epson compatible dot-matrix printer. Or use any laser printer that supports Epson compatible graphics. Transmits files using a Hayes compatible modem, or submit them on 5 inch diskettes.

Simple Registration. All registered Type Express customers get the Express Type Processor free of charge. To register you just choose a billing program that fits your requirements, and prepay a small initial minimum purchase of type-setting. Then start using your PC as a powerful publishing workstation.

Credit Card Accounts. Charge the \$100 initial minimum purchase of typesetting services on your VISA or MasterCard. After you have used up your initial balance, additional charges will automatically be billed to your credit card.

Commercial Accounts. Send your registration with a \$200 company check for the initial purchase of typesetting services. Type Express will open an account with a credit balance of \$200. After this balance has been utilized, your company will be billed on an open account basis. Company checks with valid phone numbers only. Type Express credit policies apply.

No Risk. No matter which program you choose, there's no risk. If you are dissatisfied, you may cancel your registration and receive a full refund of the unused balance in your account.

SPREADSHEET CLINIC

Writing music in 1-2-3, a bug in its regression routine, an imaginative macro use of GET and PUT, and printing out multiple MultiPlan worksheets.

RECALCULATING A SINGLE CELL

In Spreadsheet Clinic for December 24, 1985 (*PC Magazine*, Volume 4 Number 26), there is a good tip on how to use 1-2-3's /Copy command to recalculate only part of a large spreadsheet. The trick is to copy a cell or range of cells onto itself. While this is a good method for ranges, there is a better way to recalculate the value of a single cell: just move the cursor to that cell and hit F2 (Edit) and then Return. This two-stroke technique works for both 1-2-3 and *Symphony*.

Randy Mohr
Omaha, Nebraska

```
ECHO OFF
CLS
IF NOT EXIST C:*.SDF GOTO BOMB
COPY C:*.SDF PRN
GOTO DONE
:BOMB
ECHO NO FILES WITH THE EXTENSION .SDF EXIST
ECHO To Return To The Operating System
PAUSE
:DONE
```

Figure 1: A DOS batch file that prints all MultiPlan .SDF (ASCII) files.

MULTIPLE WORKSHEETS IN MULTIPLAN

Sometimes I have to print out many *MultiPlan* worksheets at the same time. It can be a slow process to load and print each model individually, waiting for each print job to finish before going on to the next.

A good solution is to make ASCII copies of all my models on disk and then print them in succession from DOS with a batch file. The first step is to print each spreadsheet to disk with the PRINT to FILE command. This is much quicker than printing to paper. *MultiPlan* will add the extension .SDF (for Standard Data File) to these files.

Now exit to DOS and run the batch file shown in Figure 1. It uses the COPY command to send all files with the .SDF extension to the printer. Since everything is printed sequentially, I can go away and do something else until the printer stops. The batch file checks to see if there are any

.SDF files on the disk and warns you if there aren't. It also cleans up the disk by deleting all .SDF files when the print job is finished.

Anthony Kadysweski
Wilkes-Barre, Pennsylvania

This tip will work with any program that produces clean ASCII files.

REGRESSION ERROR

1-2-3 has an error in its regression analysis routine. It will give the wrong results when you use the option to force the regression line through the origin. I have spoken to Lotus's support staff, and they are willing to correct the error once they understand the mathematics. In the meantime, you might warn your readers not to use this option.

Ronny Richardson
Chamblee, Georgia

Along with his letter, Mr. Richardson in-

cluded several pages of mathematics that I didn't understand any more than Lotus's support people apparently could. Nevertheless, I believe him and will avoid using the option that forces the regression line through the origin.

TUNING IN

It's common to put a beep at the end of a long macro routine so that you don't have to be watching the screen to know when the macro has finished running. However, with more and more PCs on nearby desks, it's sometimes hard to hear a single beep or to distinguish your computer's beep from someone else's.

Symphony and Release 2.0 of 1-2-3 at least offer four different tones from which to choose with the macro commands {beep 1} through {beep 4}. I've developed a short routine in Figure 2 that plays a little tune. If you put it at the end of a time-consuming macro, you'll always recognize your own machine's call, even in the most crowded

■ SPREADSHEET CLINIC

office. The waits in the macro are not all the same length, and if you run the macro you'll hear why.

Brian Underdahl
St. Louis, Missouri

I suppose it was inevitable that once Lotus gave us more than one tone to play with, people would start trying to write music. I must confess, though, that I didn't recognize Mr. Underdahl's little creation when I played it on my machine.

The musical means at hand are, after all, limited. Beep 1 is close to a C, beep 2 is an A-flat, beep 3 is a B-flat, and beep 4 is something like another C, one octave below the first beep. You'd think Lotus might have given us a nice C-major arpeggio, but no. Putting in different numbers after "beep" won't buy you more notes, either. The series starts over again, with beeps 5 through 8 the same as beeps 1 through 4.

Curiously, the beeps are of different duration. Beeps 1 and 4 are slightly longer than beeps 2 and 3. Furthermore, although you can put in "rests"—as Mr. Underdahl did—there's no way to vary the duration of the tones. Stringing them right after each other doesn't get you one continuous tone, but a series.

You will get an almost-continuous tone if you make your macro cause a deliberate error by putting in a line such as /bbbbbb. You'll get six beeps in a row with only a very small interval between them. You can use this technique only with the default beep (beep 1), however. Even so, man is a musical beast and will squeeze tunes from even the most unlikely sources.

"LEARN MODE" FOR 1-2-3 MACROS

The macro in Figure 3 lets you record a series of 1-2-3 keystrokes for later use in a

```
\B      {beep 2}{wait @now+@time(0,0,.5)}
        {beep 4}{wait @now+@time(0,0,.5)}
        {beep 4}{wait @now+@time(0,0,.5)}
        {beep 1}{wait @now+@time(0,0,.5)}
        {beep 4}{wait @now+@time(0,0,1)}
        {beep 2}{wait @now+@time(0,0,.5)}
        {beep 3}
```

Figure 2: A time-playing macro for Symphony and 1-2-3, Release 2.0.

macro, just as Symphony does. It stores only one keystroke in each cell. To run the macro, be sure to give the cells in column D the range names to their left in column C. You must then create the Z_LR_N_MACRO range name again, this time specifying a multiple range of cells. The range must be long enough to hold the maximum number of keystrokes you expect to put in a macro. In this case, the range is 1000 cells long, running from D17 to D1017, obviously a lot longer than necessary for most macros. The "learn" routine in E7 will also handle up to 1000 entries. When you start the macro, you will get a menu that lets you choose between writing a new macro or playing back the one you just wrote.

The range names in this macro all start with Z so that they will be at the end when I build a table of range names. This is a practice 1 follow so as to segregate my utility macro ranges.

Steven Mangan
Cedar Hill, Texas

This is a deft use of GET and PUT, and the macro works exactly as advertised to expedite the macro-creation process. It's good to see people using some of the real power that Release 2 makes available. This is one

of the cleverest macros to come my way in some time.

COUNTERS AND WINDOWS

In one of your comments on a submission entitled "More on Date Entry" in the May 27, 1986, Spreadsheet Clinic (Volume 5 Number 10), you pointed out that the following construction is a useful tool for controlling macro loops:

```
/@E COUNTER" COUNTER+1"
```

If you put that construction somewhere in a loop, every time the macro processor gets to it the contents of the cell named COUNTER will increase by 1. If you're testing COUNTER against a known value, you will know to stop the macro when COUNTER equals that known value—Ed.] I agree, but it's even more useful if you turn it around as follows:

```
/@E COUNTER" COUNTER-1"
```

This is a better technique because you can now test the value of COUNTER against zero, using <, =, or >. Testing against zero is more economical than testing against a known value because you don't have to set up the macro to accommodate that value.

In a different submission in the same is-

Figure 4: An undocumented inconsistency between 1-2-3 releases.

sue ("Blanking the Screen During Macro Execution"), a reader described a technique that uses ASCII character 18 in a macro in order to switch windows. You don't have to bother with ASCII 18 because 1-2-3 already gives you the macro keyword {window}.

Frederick Miller
Carlstadt, New Jersey

There may be times when it makes sense to

increment a counter, but you are right: it's usually better to decrement it to zero for the reason you give.

You're also right about the submission that uses ASCII 18 in macros. Sometimes a quick look in the manual can deprive you of hours of creativity.

QUIRK IN 1-2-3, RELEASE 2.0

Release 2.0 of 1-2-3 has many new functions not found in Release 1A and is up-

wardly compatible with it in almost all respects. However, Release 2.0 does differ slightly from 1A in the way it handles addition. As shown in Figure 4, 1A allows addition of non-numeric cells or ranges. In 2.0, however, a formula such as +A1+A2+A3 will give you an ERR if one of the cells is a label. You can get around this problem by using the @sum function instead.

Barry Horowitz
New York, New York

CONTRIBUTE TO THE CLINIC

Share your latest spreadsheet discovery through PC Magazine's Spreadsheet Clinic. We'll pay you \$50 for anything we print, plus an extra \$25 if you submit it on a disk. If you send a disk, please include a printout of your submission.

REAL-TIME CLOCK-CALENDAR

FOR IBM® PCs
AND
COMPATIBLES

dClock™

\$59.95

Now there's a simple and inexpensive way to get time and date functions automatically on your computer. dClock, from Microsync is a real-time clock-calendar which enters the date and time into your computer system each time the computer is turned on. An internal battery maintains precise time and date functions when the system is shut down.

dClock fits directly onto your system motherboard and does not occupy an expansion slot.

dClock comes with installation software instructions, complete documentation, a 30 day free trial period and a 1 year limited warranty.

To order dClock call: (214) 788-5198
\$59.95 (Please add \$2 for shipping and handling.)

Trade up to TAS-Books
and save \$30!

TAS-Books VS. Dac-Easy

	DAC	TAS-Books
Full price including Payroll, G/L, A/R, A/P, Sales order/invoicing/PO/Inventory & Tutorial	\$159.75	\$99
Written using 4th generation language	NO	YES
Source code included/modifiable	NO	YES
Easy-to-change file structures	NO	YES
Report generator	NO	YES
Multi-user option available	NO	YES
On-line help messages	NO	YES
3-yrs. GL data by month	NO	YES
Create mailmerge files	NO	YES

**Feature for feature, dollar for dollar,
TAS-Books wins, hands down!**

TAS-Books gives you more for your money.

Before you buy DAC Easy accounting software (or if you already have), you should know what you could have instead.

You could have software that changes — easily — to fit your accounting system. Instead of the other way around. You could have a program that includes payroll and a full-featured data base at no extra charge.

If you've already bought DAC Easy, you can still trade up to TAS-Books, and get an additional \$30 off the price!

TAS-Books adapts to fit your business.

Accounting systems are not all alike. That's why TAS-Books is written using the popular TAS-Plus 4th generation language/relational data base. With source code included. So you can easily customize TAS-Books to fit your business.

TAS-Books does so much, so easily.

TAS-Books gives you full audit trails and integrated modules, with sales and purchase histories updated automatically. You can review up to 3 years of GL data by month. Plus all the usual accounting functions. And you get a tutorial, and on-line help messages in each field.

Here's what TAS-Books offers you:

General Ledger
Full audit trail
Post to previous periods and reverse
Budgeting by month
Transfer for inter-departmental supporting

Accounts Receivable
Cash sales
Missing sales and rebate cards
Detailed history of sales, costs, and net
Statements
Aging

Accounts Payable
Early 30 min. invoice vouchers
Email checks written by hand or auto print out
Checks automatically
Missing sales and rebate cards
History of disbursements

Payroll
Easy to run
Produces all necessary information
Prints 942 forms
Access to employee reimbursements without tax

Inventory
Account cost and records list cost
Adjusts physical quantity
Units, National quantities
Keeps track of non-inventoried items
History of sales, cost, and net
Adjust cost
Each item can have its own SALES and COST GL

Invoicing/bates order
On credit per order
Duo (split) lines added easily
Credit memo may be issued on same order
Discount for any line
Duo to invoice based from customer file

Purchase order
Duo (split) lines added easily
Credit memo may be issued on same order
Discount for any line
Duo to invoice based from items

Plus many reports and other features too numerous to mention!

Full-featured database gives you real versatility.

No need to buy an expensive data base to interface with TAS-Books: it's included at no extra charge! So you can easily generate customized reports and create mail-merge files. No need to preallocate files. TAS-Plus does all the hard work for you! And if you're already using DAC Easy, TAS-Books will translate your current files.

**Order today
1-800-648-6258.**

Call our Toll-Free Hotline. Use your VISA, MasterCard or American Express to order today. For information or Washington residents call 1-206-644-2015.

TAS-Books is available for the IBM PC/XT/AT and fully compatible computers

Money-back guarantee!

Try TAS-Books for 30 days. If it's not exactly what you've been looking for in an accounting software, just send it back. You'll get a full refund (less \$15 handling fee).

TAS+™

NOT COPY-PROTECTED

Trade up to TAS-Books.

Send us the title page from your DAC Easy manual. We'll send you TAS-Books at an additional \$30 off its money-saving price. Limit one discount copy per customer. Offer ends January 1, 1992.

YES! I want powerful, user-friendly accounting software, with easy-to-use customer coding and its own full-featured data base. And I want to save money over programs that offer me a lot less. Rush me TAS-Books now!

THE BAD NEWS ISN'T THE PRICE.

Okay, you could have saved thousands with Ability," the \$99 integrated program that does everything your armload of programs does.

But maybe even more importantly, you could have saved tons of time and hassle.

Because we've combined six high-powered PC productivity tools into a single, simple package.

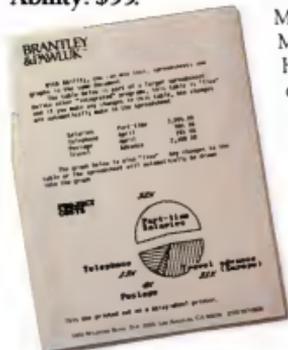

You get full-featured wordprocessing with no exotic codes to learn, and what-you-see-is-what-you-get formatting.

Spreadsheets larger than Symphony, with all the powerful math and business functions you need and the ability to import Lotus 1-2-3 files (and formulas where possible).

A forms-oriented database that's easier to use than pfs:file.

Professional business graphics from your spreadsheets and databases with just a few keystrokes.

Ability: \$99.

Menu-driven, Migent Pocket Modem™ and Hayes-compatible communications.

Even "slide shows" with sound on your PC!

And smooth, seamless integration like nothing you've ever seen before.

Because with Ability, the table and graph you see in the letter aren't just copies pasted in—they're live.

So if you change the table in the letter, the changes are made in the linked spreadsheet or database that contains the underlying data. Or change the spreadsheet and the letter is updated at the same time. And the graph is automatically redrawn to reflect the changes, either way. (Perfect for those weekly and monthly reports.)

And anybody can do it with no programming at all, because Ability is menu-driven and uses the same instructions in all six applications.

At just \$99, Ability could even pay for your PC if you don't already have one.

Check it out at your local computer store or contact: Migent, Inc., P.O. Box 6062, Incline Village, NV 89450.

(702) 832-3700.

■ NEIL J. RUBENKING

TURBO POWER USER

Handling random numbers in Turbo, initializing variables to zero, push/pop directories in Pascal, and preventing keyboard buffer overflow.

SOWING THE GOOD SEED

It is often desirable to generate identical sequences of pseudo-random numbers. But Turbo Pascal, unlike BASIC with its RANDOMIZE statement, lacks a standard procedure to reinitialize its random number routine. [Turbo's RANDOMIZE always uses the system time for its seed, like RANDOMIZE TIMER in BASIC—Ed.] However, you can force identical sequences of pseudo-random numbers in Turbo if you reseed its random number generator with identical values at the start of each sequence.

The Turbo random number seed is a 32-bit value stored at a particular offset in every program's data segment. The location of the random number seed depends upon the Turbo version and the presence or absence of 8087 or BCD support. Because the seed changes with every call to the random number routine, the program FINDSEED (see Figure 1) can be used to identify the offset address of the four bytes of the seed. This routine simply notes which bytes change after a call to RANDOMIZE. For Turbo 3.0 the offsets are 508 through 511; for Turbo-87 3.0 the offsets are 510 through 513; and for TurboBCD 3.0, they are 512 through 515.

The procedure RESEED, in the test program RANDOM_TEST shown in Figure 2, provides a way to reinitialize a pseudo-random number sequence in Turbo Pascal. Just enter the same pair of numbers and you'll get the same "random" sequence every time.

Ray Pipkin
Western Springs, Illinois

You can also use Mr. Pipkin's method to track down other Turbo internal variables. Figure 3 provides a chart of some useful locations, some of which may need a bit of

explanation. The text window coordinates are stored in two different places, using two different formats. The upper-left-hand corner's coordinates are in the data seg-

```

program FINDSEED;
const Size = 999; { Look for seed in first 1000 }
      { byte of Dete segment. }
type array_type = array[0..Size] of byte;
var  Dets : array_type absolute Deeg : $$$;
     Dump1, Dump2 : array_type;
     i : integer;
begin
  Dump1 := Dets;
  randomize;
  Dump2 := Dets;
  for i:=0 to Size do if Dump1[i] <> Dump2[i] then writeln(i);
end.

```

Figure 1: A Turbo program to locate the offset address of the random number generator's seed.

```

program RANDOM_TEST;
var  i, j, k : integer;
     Response : char;

procedure RESEED(i, j : integer);
begin
  Memv[Deeg:508]:=i; Memv[Deeg:510]:=j { Turbo 3.0 only }
  (* Memv[Deeg:510]:=i; Memv[Deeg:512]:=j { Turbo-87 3.0 only } *)
  (* Memv[Deeg:512]:=i; Memv[Deeg:514]:=j { TurboBCD 3.0 only } *)
end;

begin
  Response := 'Y';
  repeat
    if UpCase(response) = 'Y' THEN
      BEGIN
        write('Enter two integers for random number seed: ');
        readln(i, j); RESEED(i, j);
      END;
    write('Random stream = ');
    for k:=1 to 15 do write(random(9):4);
    writeln; writeln;
    write('Re-seed (Y/N) or Quit (Q) ? ');
    readln(Response);
  until Response in ['Q', 'q'];
end.

```

Figure 2: Procedure RESEED inserts the specified values into the address of the random number generator's seed. The same seed will always produce the same pseudo-random sequence.

RACORE

gives your PCjr
a powerful new boost
...even networking.

add PC performance to your PCjr.

Drive Two Plus™ gives the IBM PCjr the performance capabilities of a PC by adding a second drive plus enhancements. Your PCjr can now run PC software.

The unit includes a parallel port, a second 360K disk drive, a clock/calendar with battery back-up, additional power to the side bus and a memory expansion slot.

Drive Two Plus **\$295.00**
With DMA 3345.

Expand PCjr Memory to 640K

RACORE's expansion board boosts PCjr memory in 256K increments up to 640K. This plug-in board installs in the Drive Two Plus, or the 10/20 MB expansion units.

Memory Expansion Board

256K **\$105.00** 512K **\$135.00**

```

Figure 3: A partial list of Turbo internal variables.

ment, and the locations are numbered starting with 0. The lower-right-hand corner is stored in the code segment, and its locations are numbered starting with 1. The timing variable serves to make "delay" statements take the same amount of time regardless of CPU speed. The Turbo initialization code checks the speed and stores a delay value in this word. A normal PC gets 240 or 242, and faster machines get higher numbers. All of these values except the random number seed are valid for the PC-DOS Version 3.0 of Turbo, Turbo-87, and TurboBCD.

ZEROING VARIABLES

Turbo Pascal does not zero out variables when a program starts. This can cause problems, especially if you are accustomed to a compiler that does initialize

variables to zero. I've created a general-purpose routine, therefore, that automatically and easily sets everything to zero (and strings to null) when the program starts. To do this I include two dummy variables, zero1 and zero2, at the beginning and end of my VAR declarations. This allows me to use the same procedure over and over in different programs. The procedure ZERO uses Turbo's FillChar to fill all of the data space with zeros.

Richard Harwood
Sumter, South Carolina

Mr. Harwood's original routine used an array of bytes declared ABSOLUTE at the same address as zero1. However, using FillChar, as I have done in modifying Mr. Harwood's submission (Figure 4), is much faster than zeroing bytes in an array

```
program zeroDemo;
var zero1 : byte; {please all program variable after zero1 & before zero2}
    Xreal : real;
    Xboolean : boolean;
    Xarray : array[1..30000] of integer; { a 48K array}
    Xstring : string[80];
    zero2 : byte;

procedure ZERO;
begin
  FillChar(zero1, ofs(zero2) - ofs(zero1) + sizeof(zero2), 0);
end;

begin
  WriteLn('Variables not yet initialized -- values are garbage');
  WriteLn('Zero1 = ',zero1);
  WriteLn('Xreal = ',Xreal);
  WriteLn('Xboolean = ',Xboolean);
  WriteLn('Xstring = ',Xstring,'');
  WriteLn('Zero2 = ',zero2);
  ZERO;
  WriteLn;
  WriteLn('NOW all variables have been initialized');
  WriteLn('Zero1 = ',zero1);
  WriteLn('Xreal = ',Xreal);
  WriteLn('Xboolean = ',Xboolean);
  WriteLn('Xstring = ',Xstring,'');
  WriteLn('Zero2 = ',zero2);
end.
```

Figure 4: A Turbo program that demonstrates the procedure ZERO, which automatically initializes all variables to zero.

PC TECH JOURNAL— INPUT THAT'S INDISPENSABLE

As systems builder, integrator and overall expert in the IBM PC field, you're called on *every day* to give recommendations and advice that calls for substantial expenditures, *and* professional risks.

You can't afford to be *uninformed* or *misinformed*. You *must* be current on everything from the ever-growing complexity of PC capabilities to communications to graphics to the latest micro-to-mainframe linkage information to the function and value of new products to incorporate into *your* system.

PC TECH JOURNAL is THE magazine that keeps you at the forefront of your rapidly changing profession. It is written for YOU, the systems expert, and it speaks to YOU in your language.

Just as business consults you, YOU should consult PC TECH JOURNAL, the magazine

FOR systems experts, BY systems experts!

Plus, your subscription to PC TECH JOURNAL includes the special PC TECH JOURNAL Directory issue, a comprehensive guide to IBM/MS DOS products and index to PC TECH JOURNAL articles.

individually. Note that you can zero even a large data segment this way. I also inserted the dummy variable "massive," which has the effect of making the data segment over 60K in size.

TURBO PUSH AND POP

For those who'd rather not have yet another TSR program eating up its share of RAM, there is an alternative to John Friend's PUSHDIR and POPDIR pro-

```
{ PUSH.PAS
@y Sels Lubkin 71816,1573
Compile this to a .COM file and put PUSH.COM somewhere on your PATH. Then
PUSH will save the current directory in a file, and you can return to that
directory with the POP command.
Requires Turbo 3.0 or greater, DOS 2.0 or greater.
}
Const
  StackFileName='C:\CDSTACK.DAT'; { Change to whatever seems appropriate }
Type
  StackElement=String[66];
Var
  S: StackElement;
  StackFiles: File Of StackElement;
  I: Integer;
Begin
  Assign(StackFile,StackFileName);
  {SI} Reset(StackFile); {SI+}
  If IOResult<>0 Then
    Begin
      {SI-} Rewrite(StackFile); {SI+}
      If IOResult<>0 Then
        Begin
          WriteLn('Fatal error -- cannot open stack file');
          Halt;
          End;
        End;
      Seek(StackFile,FileSize(StackFile));
      GetDir(0,S);
      For I:=Length(S)+1 To SizeOf(S)-1 Do S[I]:=#0;
      Write(StackFile,S);
      Close(StackFile);
    End.
End.
```

Figure 5: PUSH.PAS pushes the current directory onto a stack file.

```
{ POP.PAS
@y Sels Lubkin 71816,1573
Compile this to a .COM file and put POP.COM somewhere on your PATH. Then
POP will return you to a directory path saved with the PUSH command.
Requires Turbo 3.0 or greater, DOS 2.0 or greater.
}

■ TURBO POWER USER

gramming/Utilities, Volume 5 Number 10). The programs PUSH.PAS and POP.PAS, shown in Figures 5 and 6, do the same thing as Mr. Friend's utility, but they keep the subdirectory stack on disk using Turbo's directory management routines. These programs were submitted by Bela Lubkin of Aptos, California.

If you use PUSH and POP, you should include a line in your AUTOEXEC.BAT to delete the stack file if it is present when you power up. That way you'll start with a clean stack. The command

```
DEL C:\CDSTACK.DAT > NUL
```

will do the job, redirecting the output to NUL so you won't have to see the error message if the file is absent.

NULKEY.PAS

The usual way Turbo programs determine if a "special" key (e.g., a function key or an arrow key) has been hit is to test for an

```
PROGRAM Nul_Key_Demo;
VAR C, D : Char;
PROCEDURE Enable_Nul_Key;
BEGIN
  IF Mem[CSeg:$885] <> 27 THEN
    BEGIN
      WriteLn('Wrong version of Turbo Pascal');
      Halt;
    END;
  Mem[CSeg:$885] := 0;
END;
BEGIN
  Enable_Nul_Key;
  REPEAT
    Read(Kbd, C);
    IF C = #8 THEN
      Read(Kbd, D)
    ELSE D := #0;
    IF C = #0 THEN WriteLn('Special key ', D)
    ELSE WriteLn('Normal key ', C);
  UNTIL C = #27;
END.
```

Figure 7: A procedure that self-patches any Turbo program to return a NUL rather than an ESC character for special keystrokes.

OXFORD® HAS A LOT TO OFFER.

AND ALSO VERY LITTLE.

No matter what kind of computer paper you need, you can find it from Oxford.® We make one of the widest assortments of computer paper around, including six different grades and four different sizes.

And to make sure you not only get the kind you want, but the amount you want, we also make three different size packages. Including a convenient small size, especially designed for PC users.

ESSELTE

© 1986 Esselte Pendaflex Corp. Oxford® is a registered trademark of Esselte Pendaflex Corp.

The point is, computer paper shouldn't be something you have to spend a lot of time looking for. That's why we offer as much (and as little) as we do.

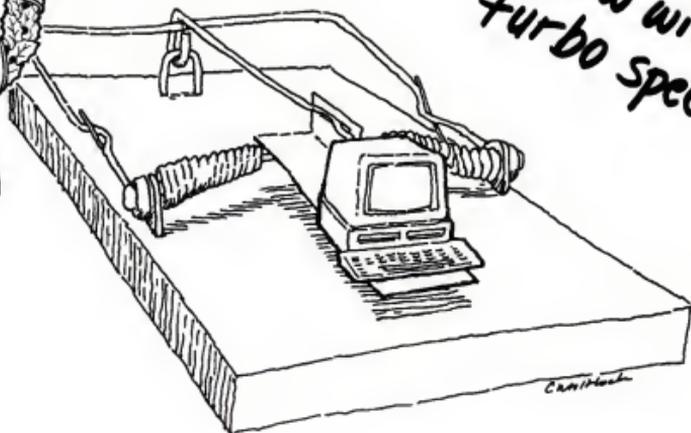

Look for Oxford the next time you buy computer paper. And for a free 50-sheet sample package of letter quality Oxford paper, write to: Evelyn Pierce, Esselte Pendaflex Corporation, Department P-C-2, 71 Clinton Road, Garden City, NY 11530.

Oxford®

CIRCLE 173 ON READER SERVICE CARD

Now with
turbo speed!

What can you expect for \$1000?

As prices for PC-compatibles come down, your chances of buying a lemon go up. The fact is, a lot of seeming bargains can turn out to be expensive traps.

That's not to say a reliable, full-featured PC for \$1000 is impossible to find. You just have to know where to look. And what to look for.

At PC Designs, we've built a reputation of knowing where to look for the finest, most reliable components and offering them in easy-to-assemble kits. The result has always been higher performance at a lower price.

Even at \$995 complete, our new PC is no exception.

The Plain Truth

We call our new XT-compatible The Plain Vanilla... an honest computer at an honest price. But don't be fooled by the name—or the price. The Plain Vanilla outperforms any other computer in its price range, and some costing a lot more.

Listen to what Paul Bonner of PC Week had to say about The Plain Vanilla: "... at \$995, The Plain Vanilla represents an incredible bargain for a standard XT-compatible."

So what do you get for \$995?

Pure Performance

- IBM PC-XT compatible BIOS
- 640K on-board RAM
- intel 4.77 MHz 8088 Microprocessor
- 135-watt 110-220 VAC power supply

- Two DS/DD floppy drives with controller
- High-resolution amber monochrome display
- Monochrome graphics compatible display card
- "Switchable" AT-style keyboard
- Two parallel ports, two RS232 serial ports and game port

Actually, there's a lot more. Like a built-in clock/calendar with battery back-up, support for an optional 8087 math coprocessor, RAM disk software, a print spooler (along with several useful public domain programs) and a hinged, metal XT-style case with six expansion slots.

CIRCLE 373 ON READER SERVICE CARD

It's Complete

As with all PC Designs products, The Plain Vanilla comes to you complete (a lot of PCs at this price are just skeletons—you have to add a monitor or a keyboard or a graphics board or... you get the idea).

If you should want to expand your system, let us know. We have a full line of exciting peripherals at equally exciting prices (How exciting? Call us and we'll tell you in detail).

In fact, if you'd like to enhance The Plain Vanilla right away, order it with a 20 megabyte hard disk for just \$1,404.

Call Us Now

One thing is as plain as day: There's a lot of demand for a PC this good at a price this reasonable. So call us now at our Tulsa headquarters and order your Plain Vanilla. And remember to ask about our 30-day risk-free policy and our one-year warranty.

The Plain Vanilla from PC Designs. It's just plain incredible.

■ TURBO POWER USER

ESC character from the keyboard with another key waiting in the keyboard buffer. This is because Turbo translates special keys into two characters: the ESC plus a character whose ASCII code corresponds to the scan code of the special key.

You can run into trouble if you type fast enough to stack up keystrokes in the keyboard buffer, however. If the keystrokes ESC and ";" are waiting in the keyboard buffer, for example, your Turbo program is likely to interpret them as if you had hit the F1 key. DOS doesn't have this problem, as it returns an ASCII 0 (NUL) for the first character. The IBM keyboard never produces the NUL character alone, so there's no chance of confusion. Any Turbo program can do the same, with the help of a tiny patch.

Figure 7 lists a procedure by Jim Hollenberg of New York that will self-patch the program containing it. You must compile it with PC-DOS Turbo, Version 3.01A

■ If the keystrokes ESC and ";" are waiting in the keyboard buffer, your Turbo program is likely to interpret them as if you had hit the F1 key.

(either the plain version or those with BCD or 8087 support). Immediately after procedure Enable_Nul_Key runs, the special keys will return NUL as their first character instead of ESC, eliminating the key-stacking problem. Do note, however, that you must not run the program in mem-

ory before compiling it to a .COM file, nor can you run it repeatedly in memory. Running the program changes the byte at CSeg:5885 to 0, so the next time you run it, you'll get the error message "Wrong version of Turbo Pascal." When you recompile the program, you restore that byte to its expected value of 27.

SHARE YOUR TURBO POWER

Tell the world about your latest Turbo Pascal programming and applications tips through Turbo Power User, and we'll pay you \$50 for your trouble, plus an extra \$25 if you submit it on a disk. If you do send a disk, please include a printout of your submission to ensure against damage in transit. Mail your contributions to Turbo Power User, PC Magazine, One Park Avenue, New York, NY 10016. ☐

Now just
\$1575!

Meanwhile, our competition is still in the pits.

These days, to win the "advanced technology" race, you have to have great performance and a great price.

At PC Designs, we've earned quite a reputation offering just that. Our component computer kits have consistently blown the doors off of everything in their price range (and many costing a lot more).

But our new 8MHz AT is the best example yet of supercharged power at a sub-compact price. That's why we call it The PC Designs Turbo AT. It takes the checkered flag for performance, yet it costs just \$1575 complete. (Compare that to the "limited" ATs that aren't even race-ready—you have to supply a monitor and display card).

What's under the hood?

At the heart of our Turbo AT is a super-fast 8MHz 80286 microprocessor. But that's just the beginning... read on:

- Fully IBM "AT" compatible BIOS
- Optional 6MHz operation
- One Megabyte on-board RAM
- 192-watt power supply
- Optional 80287-8 math coprocessor
- Two Centronics parallel ports and two RS232 asynchronous communication ports
- Princeton Graphics MAX-12 amber monochrome display
- High resolution monochrome graphics display card
- Choice of 360K or 1.2 Megabyte floppy drive (with combination floppy/hard disk controller)

As usual, there's a lot more. Like a SETUP program that configures everything from

RAM size to video adapter type, a CMOS clock/calendar (with battery back-up), AT-style case and chassis (steel, not plastic) and a low-profile, IBM "selectric" type AT-compatible keyboard.

risk-free, money back guarantee and one-year warranty).

The PC Designs Turbo AT... Fast-lana performance at a sub-compact price.

Something Special

That's a lot for just \$1575. But there's one very special component we didn't list that you won't find anywhere else: The proven commitment to its customers PC Designs is famous for. We originated the component computer kit idea so we could assure you of the best performance at the best price. So if you'd like to upgrade, tell us what you want to do—chances are, we've got the components you need at a price that will astonish you.

With these kind of features at such a low price, our new Turbo AT is going to move very fast, indeed. So call PC Designs today at the number below and place your order (And while you're at it, ask us about our

Special Offer

Place your order before Jan. 1, 1987 and get our new Enhanced Graphics Adapter for just \$175.

Our new EGA is fully IBM-compatible and gives you all the versatility and power of an IBM Enhanced Graphics Adapter, a Color Graphics Adapter and a high-resolution Monochrome Display Adapter. And, thanks to some very powerful VLSI chip development, it offers all this on a half-size expansion board.

- 256K high-speed video display buffer memory
- RAM loadable character generator
- ROM BIOS compatible with IBM EGA
- 32-pin feature connector
- Light pen interface

■ PAUL SOMERSON

USER-TO-USER

Avoiding batch mishaps, speeding up graphics displays, adding VAX-like pseudo-commands, and customizing SETUP.COM triggers.

BATCH FEEDBACK

Gary Later's program GETNEW.COM (User-to-User, Volume 5 Number 16) provides a useful way to implement an interactive batch file in which a letter typed on the keyboard sets the ERRORLEVEL to its corresponding ASCII value. However, Mr. Later's program does not echo the character typed. Since batch files execute painfully slowly, even on a hard disk system, an impatient user may repeatedly press the key until a response is seen. These extra keystrokes are stored in the input buffer and may cause undesired effects

```
N GETNEW.COM
A
MOV AH,0
INT 16
OR AL,20
MOV DL,AL
MOV AH,02
INT 21
MOV AH,4C
INT 21

RCX
10
W
Q
```

Figure 1: Script for modified version of GETNEW.COM. Enter this script into an ASCII file called SCRIPT using an ASCII word processor (such as SideKick's notepad) or the DOS COPY CON: command. Leave a blank line before RCX. Make sure DEBUG.COM is on your disk or PATH to it. Then get into DOS and type DEBUG<SCRIPT to create the file GETNEW.COM.

once control is passed to a program.

A simple modification of GETNEW that provides feedback to the user by echoing the character typed is listed in Figure 1. Since most users leave CapsLock off and

```
echo off
:restart
cls
prompt
cd\
path\
type menu.txt
getnew
echo ...Wait...
if errorlevel=114 goto errmsg
if errorlevel=113 goto g
if errorlevel=105 goto errmsg
if errorlevel=104 goto h
if errorlevel=103 goto g
.
.
if errorlevel=97 goto a
:errmsg
echo Invalid response.
goto restart
:a
echo Running [program a]...
```

```
cd\[subdirectory a]
[batch instructions to run program a]
.
.
goto restart
:b
echo Running [program b]...
cd\[subdirectory b]
[batch instructions to run program b]
.
.
goto restart
:c
[etc.]
.
.
:q
cls
prompt type HELP for menu_$n$g
```

Figure 2: Listing of batch file HELP.BAT, to be stored in the root directory. This program may be called by AUTOEXEC to provide a user-friendly startup menu and will display a menu whenever the user enters HELP at the DOS prompt.

QuickBASIC just got quicker with QuickPak

QuickPak is a superb collection of enhancements, subroutines, and instructional material designed to help you get the most out of programming in BASIC.

■ Powerful assembly language routines to give your programs more speed, more power, and full access to all of the DOS and BIOS services.

■ SORT all or part of a string array with one command! FIND any string or sub-string within an entire array regardless of capitalization — accepts wildcards. READ directories into your programs from any drive or path. READ/WRITE disk sectors — create your own DOS utilities! CLEAR or SCROLL any part of the screen. MANY, many more programs included.

■ Professionally written QuickBASIC routines and functions for inputting text, dates, and numbers. Menus, scroll-bars, date/time functions, much more.

■ The Assembly Tutor — a complete guide to learning assembly language from a BASIC perspective. Learn how to create your own routines and extensions.

■ Tips and Tricks book — packed with clever ideas and techniques to help you be a better programmer.

You get all this, all of the source code for every program included, and a thirty-day money-back guarantee for only \$69.00. No royalties, not copy protected, of course.

■ USER-TO-USER

work with lowercase letters, I've modified the program to convert all input to lowercase. If uppercase conversion is preferred, replace the

```
OR AL, 20
```

with

```
AND AL, DF
```

The listing in Figure 2 is a batch file program that uses GETNEW to run any of a selection of programs listed on a menu. To speed execution, the menu is stored in an ASCII file MENU.TXT (Figure 3) in the root directory. This batch file can replace a number of smaller files used to call individual programs. Since each batch file replaced uses 4,096 characters of storage on a hard disk regardless of how small it is, the savings in disk storage space can be considerable.

Edward B. Borden
Smithtown, New York

This modification can come in handy if you run your batch files off floppies or slow hard disks. But it's far more efficient to create a small RAMdrive when you boot up (the DOS VDISK.SYS will handle the job just fine), copy your important batch files to the RAMdrive, PATH to it, and execute everything out of memory. We recently set up a demonstration with a 30K batch file (!) loaded into a RAMdisk, and it flew.

The technique of using the TYPE MENU.TXT command rather than a string of ECHO statements to display a long menu is a good one, as is leaving the final

carriage return off the last line of the .TXT file that acts as a prompt. (Don't omit carriage returns from final ECHO commands, however, or DOS won't execute them properly.)

By the way, the 4K minimum file length applies just to XT hard disks under 2.x; an AT running DOS 3.x, gets away with files half that size.

FASTER SLIDE SHOW

I've adapted a trick you printed in this column several months ago (Volume 5 Number 10) to produce a very smooth BASIC slide show program. The BASIC BLOADER normally reads a graphics screen off a disk directly to the screen buffer. This approach gives a very slow (7.5-second) and messy screen update.

However, using a combination of the PUT statement and VARPTR function with BLOAD creates a fast and smooth slide show program. First, I use the statements below to create my screen data files:

```
100 DIM A(4000)
.
. (Screen-creating code)
200 GET (0,0)-(319,199),A
210 DEF SEG
220 ADDRESS = VARPTR(A(0))
230 BSAVE "SCL".*,ADDRESS,16000
```

I then use the following statements to display the graphics screens:

```
100 DIM A(4000)
110 ADDRESS = VARPTR(A(0))
120 BLOAD "SCL".*,ADDRESS
130 PUT (0,0),A,PSST
```

This method updates the screen in less

type	to do this
a	run [program a]
b	run [program b]
c	run [program c]
	:
	:
h	run [program h]
q	exit this menu to DOS

When in DOS, type HELP to get back to this menu
Type letter (a through h or q):

Figure 3: Listing of ASCII file MENU.TXT stored in root directory. The file ends after the : on the last line without a carriage return, so that the input letter to be echoed will appear on the same line as the request.

■ USER-TO-USER

than a second. It still takes about 7.5 seconds to BLOAD the graphics information into memory, but you can display one screen while the next one loads.

Jack Grasham
Portland, Oregon

We adapted the technique in the DEMOLOAD.BAS program listing in Figure 4. A normal BLOAD is slow because it has to read the image off a disk and interleave the odd and even scan lines. It's much faster to assemble the information first and then move it quickly from one part of memory to another, as done here.

SUBDIRECTORY NAVIGATORS

VAX mainframes offer several predefined symbols that greatly simplify movement through a hierarchical directory structure: UP, DOWN, OVER, and HOME. These pseudo-commands aren't significantly faster than VAX/VMS's SET DEFAULT

command, but they are much more logically oriented.

I created four batch files called UP.BAT, DOWN.BAT, OVER.BAT, and HOME.BAT, which I store on a RAMdisk and use as if they were actual DOS commands.

To go to the parent directory (the one up above the present directory), just type UP and hit Enter. To go to a subdirectory called DOS (located down below the present directory), just type DOWN DOS. Use OVER to move from the present directory to one having the same parent

```
100 ' DEMOLOAD.BAS -- Jack Grasham
110 DEF FNS$(Z)=MID$(STR$(Z),2)
120 SCREEN 1:CLS:KEY OFF:DIM A(4000)
130 PRINT "First we'll make 3 screens"
140 PRINT "(Hit any key to continue)"
150 WHILE INKEY$="":WEND:CLS
160 FOR B=1 TO 3:FOR C=1 TO 23
170 PRINT STRING$(40,48+B);:NEXT
180 CIRCLE (160,92),60,B,,4/5
190 PAINT (160,92),B
200 GET (0,0)-(319,199),A
210 DEF SEG:ADDRESS=VARPTR(A(0))
```

(continues)

Figure 4: DEMOLOAD program (for color systems only) that creates three graphics screens and then loads them rapidly onto the screen.

BACKUP POWER

Uninterruptible Power Systems

• U.L. listed.

* \$1995.00

Available in 500VA, 600VA, 800VA 1000VA
& 1200VA Sizes.

"Clary Corp.'s OnGuard 600VA has the makings of the perfect UPS: it's functionally invisible. Whether or not line voltage is available, it constantly supplies up to 600VA of nearly pure sine-wave power at an almost unvarying 120 volts. No UPS is more unobtrusive than the OnGuard."

-WINN L. ROSCH
P.C. MAGAZINE
SEPTEMBER 16, 1986

- On-line operation, static bypass switch and sine-wave output.
- Fifth generation, high frequency PWM technology reducing size and weight by over 50%.
- Meets FCC Part 15-Class A, NEC and IEEE 587 standards.

■ USER-TO-USER

(move over to a directory on the same level). HOME will return you to the root directory.

This is UP.BAT:

```
ECHO OFF
CD..
CD
```

(The CD command lacking an argument

simply displays the current directory.)

This is DOWN.BAT:

```
ECHO OFF
IF "%1" == "" GOTO NODRSPEC
CD \1
CD
GOTO END
:NODRSPEC
```

ECHO Move down to where?
:END

This is OVER.BAT:

```
ECHO OFF
IF "%1" == "" GOTO NODRSPEC
CD..\1
CD
GOTO END
:NODRSPEC
ECHO Move over to where?
:END
```

And this is HOME.BAT:

```
ECHO OFF
CD\
CD
```

When using DOWN.BAT or OVER.BAT, be sure to enter the name of the subdirectory where you want to end up. If you don't specify one, the batch file will ask you where you want to go. (VAX symbol commands at work are not nearly so polite; they respond with a very sarcastic

```

```

(Figure 4 ends)

THE LAST SPORTS GAMES YOU'LL EVER NEED!

"If you're looking for the most realistic simulation around, 3 in 1 FOOTBALL should be your first draft choice."

—The Chicago Tribune

"[BASKETBALL is] another real winner from Lance Haffner...a must addition to your library"

—The Guide To Computer Living

Didn't like the way last season went for your favorite team? Here's your chance to do better as the coach. Or imagine the possibilities of dream matchups like the '72 Miami Dolphins vs. the '85 Chicago Bears or UCLA with Alcindor going against Patrick Ewing and Georgetown. How about the '86 Celtics against anybody? Now YDU can know the outcome of some of the greatest sports matchups that never were!

3 IN 1 FOOTBALL

- with Stats Compiler for each player and team • you choose from 14 offensive plays and 6 defensive formations
- includes 176 college teams, the 28 NFL teams and 14 USFL teams from the '85 season PLUS 174 great college and 189 great pro teams of the past

FINAL FOUR COLLEGE BASKETBALL & BASKETBALL: THE PRO GAME

- Includes Stats Compiler • you determine starting lineup, substitutions, shot selection, passing, offensive and defensive styles of play and more • The College game includes 292 teams from the '85-'86 season plus 70 all-time greats • The Pro game features the 23 NBA teams from '85-'86 and more than 100 great teams of the past

OTHER PAST SEASONS' TEAMS DISKS AVAILABLE AND 1986 FOOTBALL TEAMS READY PRIOR TO PLAYOFFS AND BOWL GAMES.

Available at your local dealer or send check or money order for \$39.99 each. Visa and MasterCard accepted on phone orders only. Please add \$2.00 for postage and handling.

SUPER HOT.

SuperCom - \$589

Now Corporate Marketing Inc. brings you a super value on their SuperCom Turbo XT[®]. For only \$589, this reliable IBM[®] compatible runs virtually all software - including Lotus 1-2-3 and dBase III. SuperCom is twice as fast for less than half the price, and it's also available in our AT[®] model. We're confident enough to offer a 30 day money back guarantee, as well as a one year limited warranty on parts and labor.

With over 17 years of experience and full inventory of all major computer products, you can depend on Corporate Marketing Inc. for the most competitive prices, immediate deliveries and for professional factory trained technical support.

The heat is on for SuperCom.

Attention all FX80, FX100, JX, RX, & MX owners:
**You already own half of
 a great printer**

Dealer
 inquiries
 welcome.

Now
 Only
 \$79.95

Now for \$79.95 you can own the rest. You see, today's new dot matrix printers offer a lot more.

Like an NLQ mode that makes their letters print almost as sharp as a daisy wheel. And font switching at the touch of a button in over 160 styles. But now, a Dots-Perfect

upgrade kit will make your printer work like the new models in minutes— at a fraction of their cost.

And FX, JX and MX models will print the IBM character set, too.

So, call now and use your Visa, MasterCard, or AmerEx. Don't replace your printer, upgrade it!

9 TRACK TAPE

Our "TAPE CONNECTION" system is used by hundreds of companies for mailing lists, report filing, check processing, sales analysis, off-line printing, and exchanging large data base files with a mainframe. Our system features:

- Attach to most IBM PC compatibles
- Cobol, Fortran, BASIC, and C support
- 600 NRZI, 1600 PE, and 8250 GCR
- Transfer rate is 1-4 MByte/Minutes
- Block lengths up to 65K
- ANSI, IBM, DEC, and DG supported
- Support for most record types
- Multivolume and labeled tapes
- Select specific records to transfer
- Record reformatting and translation
- Hard disk backup utility
- Support for many tape drive models

The price for controller card, cable, and transfer software is only \$795. The optional tape data reformatting utility is \$195. Several model tape drives are available for \$2700 to \$9200 depending on features.

Since 1982, we have installed thousands of diskette and tape conversion systems at customer locations around the world. Call us today for help in connecting a 9-track tape system to your IBM PC.

CIRCLE 180 ON READER SERVICE CARD

■ USER-TO-USER

tic "Really, to where?" prompt.)

If you are using a RAMdisk, you should copy these files to it. If you are not using a RAMdisk, be sure to place the batch files on a directory specified by the PATH command in your AUTOEXEC.BAT file.

Michael B. Williams
 Virginia Beach, Virginia

These are actually useful little batch files, especially if you have a long list of second-level subdirectories (like \FIGURES\JAN, FIGURES\FEB, FIGURES\MAR, etc.) buried under a few level-one directories, and you frequently jump around from JAN to MAR to FEB. Be sure to store these batch files in a subdirectory that's included in your PATH, so DOS can find them.

SECOND SHIFT

I find the SETUP.COM program (Programming/Utilities, Volume 5 Number 12) one of the handiest utilities yet. However, I had to make a few minor changes to make it work with my Okidata 93, and the default Ctrl-Right Shift trigger conflicted with another memory-resident program.

It's simple to use DEBUG to patch the SETUP.COM code at locations AD9 and ADB for other triggers, as follows:

```
03 = Left Shift-Right Shift
05 = Ctrl-Right Shift
06 = Ctrl-Left Shift
09 = Alt-Right Shift
0A = Alt-Left Shift
0C = ALT-Ctrl
```

James B. Blair
 Cypress, California

The resident SETUP printer controller is a real winner. If you haven't tried it yet, download a copy from the PC Magazine Interactive Reader Service. Note: If you do make the patch above, be sure to do it in both the AD9 and ADB locations.

SHARE YOUR DISCOVERIES

Tell fellow users about your latest discovery through User-to-User, and we'll pay you between \$50 and \$300, plus an extra \$25 if you submit it on a disk. If you send a disk, please include a printout to ensure against damage. Mail your contributions to User-to-User, PC Magazine, One Park Avenue, New York, NY 10016.

THE HOTTEST
COMPUTER PROGRAM OF 1986!

Interlude II

I bought you a computer program for Christmas.

You what??

You'll like it. It's full of sexy and romantic surprises.

Really!

Look at this one—Love on the Rocks...with a twist of fun. Or Jungle Fever...me Tarzan, you Jane!

Oooooooh, how about Satin Dreams...to turn us into dream lovers. Or Some Enchanted Evening...guaranteed to put romance back in our lives!

Now what do you think of my gift?

C'mon, Tarzan...let's go play.

Turn your computer into a magic genie this Christmas with Interlude II.

Interlude II is the most sensational computer program on the market. Each time you play, the program starts with a computerized interview to probe your deepest desires and fantasies. Then it suggests a romantic or sexual scenario (called an Interlude) to match your mood of the moment. Over 160 Interludes are contained in the program, including Love Odyssey, Light My Fire, From Here to Ecstasy, Caveman Caper, Thriller, A Gift of Love, The Pleasure Tapes, Madam's Menu and Rembrandt's Delight. Whether you feel romantic, serious, playful or ever so naughty, this program has an interlude to match your mood.

Go ahead. Give your sweetheart Interlude II for Christmas. It's the gift that keeps on giving...all year long!

NOTE: Interlude II is available for the IBM PC/XT/AT, PCjr and compatibles or the Apple II, II+, IIc and IIcx.

THE

BIG BOOK

BY ANY

MEASURE.

**WHEN ONE
MAGAZINE IS
BOTH BIGGEST
AND FASTEST
GROWING,**

**THERE HAS
TO BE
A REASON.**

375,000

In the PC/MS-DOS market, there's no shortage of confusion. But one thing is perfectly clear:

PC Magazine has both the largest and fastest growing circulation of any publication. Its circulation of 375,000 is up 25% from 1986—and moving fast.

PC Magazine is growing so sharply in both subscribers and newsstand sales because it provides a unique response to PC buyers' most pressing need—comprehensive and reliable product reviews.

PC Magazine's readers are brand specifiers, technically knowledgeable people who are charged by their companies and organizations with making specific product choices. They call the shots when it comes to buying.

They know better than anyone

that although the microcomputer industry gives birth to many superb products, it also produces a raft of indistinguishables, and noncompatibles. Their job—should they wish to keep it—is to tell the difference.

PC Magazine has reduced the risks for its readers by taking on the grueling task of creating benchmarks and new testing methodologies and applying them to products in side-by-side comparisons. It's expensive, time-consuming and risky—and well worth the effort.

Helping readers find their way through the tangle of PC products is what we do best. Readers have responded by making us the biggest book in the field, offering advertisers the broadest coverage of the growing PC/MS-DOS market—and at the lowest cost per reader.

If you're an advertiser in this market, check out our figures. You won't find better anywhere.

THE BIG BOOK BY ANY MEASURE.

Comes with free DS Backup—
a \$69.95 value

Announcing 7 different Express Hard DiskCards™ from 20 to 60 megabytes starting at \$449—including an internal Hard DiskCard with automatic backup for your IBM AT®

Complete Systems

Each Hard DiskCard comes complete with everything you need, installs in minutes, boots off the hard disk, has a programmable interleave factor of up to 1-to-1,*** and has plated media. You can add it to an existing hard disk and, for an extra \$95, have both disks act as one.

Easy Installation

If you're someone who hates reading installation manuals or who gets intimidated installing internal disk drives, one of the Express Hard DiskCards™ is for you. Simply insert it inside your IBM® PC, XT, AT or compatible, like any other add-on card.

High Performance

Express Hard DiskCards give you from 20 to 60 megabytes of rigid disk storage, and something more. The controller comes with a programmable interleave factor of up to 1-to-1, which means that you retrieve data up to 6 times faster than the PC XT which has a 6-to-1 interleave controller.

Access Speed

The Express Hard DiskCards, with an average access speed of 60 msec, gives you—in addition to that extra speed—head retraction. Before you start thinking you've just got to have head retraction, you should

know that the 80 msec Express Hard DiskCards are rated at 50 g's power off and 10 g's power on. Furthermore, our 80 msec Hard DiskCards, like all Express Hard DiskCards, have plated media. Most hard disks on-a-card have iron oxide (it looks and acts like rust), which means if the head hits the iron oxide, it will gouge out media and your data along with it. Plated media, on the other hand, looks like a car's chrome bumper. If the head hits, it will cause little or no damage. That's why Express offers drives with high g tolerances.

All of the benefits of our 80 msec drives aside, you may want to get our 60 msec drive just for the extra speed. But in addition to increased

access speed, you'll be getting automatic head retraction.

50 percent faster

Our 30 and 60 megabyte Hard DiskCards give you more storage space, but in addition, they also give you a transfer rate of 7.5 megabits per second—a full 50 percent faster than an IBM XT or AT hard disk. Faster speed is important, and becomes more so if you want to combine disks.

One File, Two Disks

With Express Systems' new Conlesee™ Software, you can add our 20 or 30 megabyte Hard DiskCard™ to your existing hard disk. They will both work together as if though they were one disk—up to 60 or 144 megabytes worth.

Conlesee not only merges the two hard disks together, it bypasses the DOS barrier of 32 megabytes. That means that if you already own a 114 megabyte hard disk, you can add our 30 megabyte Hard DiskCard and have a total of 144 megabytes as a single file!

However, if you don't have a

hard disk now and want 40 or 60 megabytes of hard disk storage. Then our Express Double DiskCard™ comes with two hard disks. You can use one disk to back up together with our automatic backup software *Auto DiskSave*™ or for an extra \$95, you can buy *Coalesce* and have both disks work as one.

Free backup program

All Express Hard DiskCards are available with a free backup program, *DS Backup*.™ This easy and convenient program—a \$69.95 value—makes backing up simple and fast. And to receive it, all you have to do is ask for it when you order.

AT Backup DiskCard™

How would you like to know that your IBM AT's hard disk is always backed up without having to think about it. With Express Systems' AT Backup DiskCard™ you can have 20 megabytes of hard disk backup on a card without taking up valuable front panel space. The AT Backup DiskCard comes with *Auto DiskSave* software, so you

Express®. The next day or the day after—you decide.

For the best buy in a convenient, easy to install hard disk, call Express Systems.

*Uses IBM AT or compatible controller.

**Available only for the IBM AT or compatible.

***For IBM AT and compatibles, the interleave factor is dependent on its controller.

†Takes up 1 1/2 slots and works beside any 1/2 slot board such as floppy controller.

can backup by date, time, archive bit (since you last used a file), by subdirectory, file name or groups of files, or any name combination using DOS wild cards. Furthermore, you can schedule your backup for anytime you return to DOS, or at specific times.

If you're worried about 20 megabytes not being enough space, we include Express Systems file compression software, *File Compressor*.™ which compress binary files 30-35 percent, text files 40-50 percent, and data base files up to 90 percent of their original space. And not only will you not have to think about backing up your files, the AT Backup DiskCard will do it file-by-file at the rate of 3 megabytes per minute.

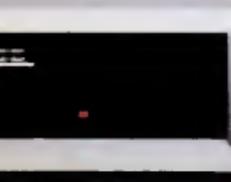

Compatibility

The Express Hard DiskCard is compatible with most IBM PC or XT compatible computers, including but not limited to, all Leading Edge®, all Compaq® computers, ATAT 6300, Sperry, Zenith, Epson, and most others. And all of the cards can work with the IBM PC's 65 watt power supply.

■ CHARLES PETZOLD

PC TUTOR

How to slow down a PC AT; DOS 3.0/WordStar incompatibility; different ways DOS uses to exit from assembly language programs.

SLOWING DOWN THE AT

I've seen a lot of things in *PC Magazine* about speeding up the PC AT. But my AT is too fast for some of the games written for the PC. Is there any way I can slow it down so I have a fighting chance with these programs?

Raphael Salgado
Valley Cottage, New York

Well, this is a refreshing change, and not very difficult. It's generally much easier to slow something down than speed it up.

SLOWDOWN is a resident program that intercepts interrupt 8, the timer interrupt. The timer interrupt occurs every 55 msec. Normally, interrupt 8 doesn't do very much, so it doesn't significantly alter the speed of your computer. *SLOWDOWN*, however, executes a small loop every 55 msec to slow down the overall speed of the machine.

You can create *SLOWDOWN.COM* by getting into *DEBUG* and typing in the lines shown in Figure 1. You don't need to type the semicolons or the comments following them.

You use *SLOWDOWN* by executing *SLOWDOWN* value

where value is a number from 0 through 65535. This is the value *SLOWDOWN* uses for the loop. The higher the number, the slower your AT will run. A value of 20000 or 25000 will slow down an 8-MHz AT to about the speed of a 4.77-MHz PC or XT. (It's not possible to mimic a PC or XT exactly because the 80286 microprocessor has different speed advantages

depending upon the instruction mix.)

You can execute *SLOWDOWN* more than once, in which case the loop values will accumulate. For instance,

```
SLOWDOWN 10000
SLOWDOWN 10000
SLOWDOWN 5000
```

is the same as

```
K SLOWDOWN.COM

R CX
SI
DI
0
```

Figure 1: By typing these lines into *DEBUG*, you can create *SLOWDOWN.COM*, a program that will slow down your PC AT.

SLOWDOWN 25000

To get back to normal speed, you'll have to reboot. (You can also remove *SLOWDOWN* from memory with a RAM-resident manager like *PopDrop*.)

Given a high enough loop value, *SLOWDOWN*'s loop will itself take 55 msec. As soon as the loop completes, another interrupt 8 will start it all over again. This will slow down the machine to almost a dead crawl. (TSO users on IBM mainframes will experience some déjà vu when this happens.) On an 8-MHz AT, this happens with a loop value of about 36300.

With loop values higher than this, the 8-MHz AT will start to speed up again, but it will be jumpy and do things in rhythmic spurts. This occurs because the loop takes longer than 55 msec, and the AT is starting to skip interrupt 8s. Your PC's clock will also start losing time.

SLOWDOWN cannot be used with programs that must be booted from diskettes. Note also that some programs may disable interrupts for a while, grab interrupt 8 themselves, and even reprogram the 8254 timer chip. *SLOWDOWN* won't work right with such programs.

A note to programmers: If you need to do gamelike animation in your programs, don't use delay loops. Poll the timer values to pace the program, or grab interrupt 1Ch and make the program timer-driven.

CHANGING DRIVES IN WORDSTAR

I recently upgraded my PC from DOS 2.1 to DOS 3.0, and I'm having a problem with *WordStar*. When I try to change the

A NEW DIMENSION IN COMPUTER EDUCATION

"PC TechVideo provides an in-depth overview of the installation of computer components. We use it to train all our technicians and assemblers."

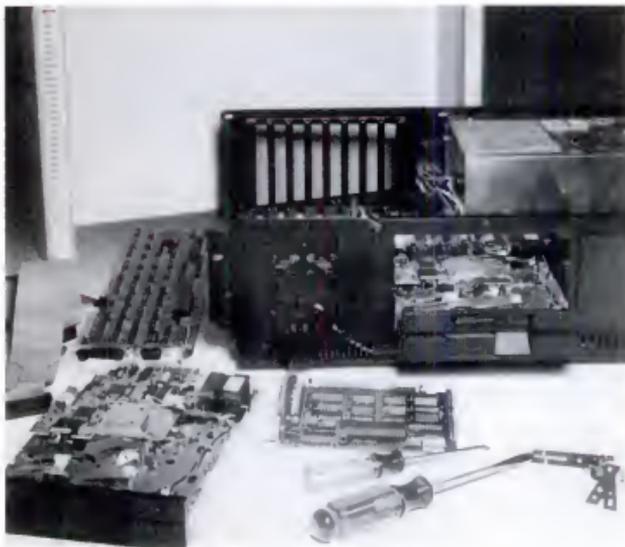

John Atma, Chief Technician
for Tech Personal Computers

"After viewing PC TechVideo, I now understand the basics of how my computer works and was even able to replace the 1.2M drive on my AT at work. PC TechVideo was definitely worth the money."

Brenda Hudson, Data entry and processor
for Sark Enterprises

"PC TechVideo is great. With the help of PC TechVideo, I was able to install a 10MB hard disk on my XT without taking it to an expensive service center."

Gita Beant, Economics major
at UC Irvine

PC TechVideo is an innovative set of two 2-hour instructional video tapes which form a complete guide to the IBM® and compatible personal computer systems. Designed for everyone, from the complete novice to the software expert, PC TechVideo provides the viewer invaluable first hand instruction in the installation and maintenance for IBM® and compatible systems.

Part I of PC TechVideo is a complete and comprehensive presentation of prominent features of the PC family including:

Motherboard architecture

Memory Configuration and Addressing
Monitor Technology
Floppy and Fixed Disk Technology
Bus Architecture
Serial and Parallel Ports

Part II of PC TechVideo shows the details involved in actually installing, configuring, and replacing:

Motherboards
Power Supplies
Floppy and Fixed Disks
Drive Controllers
Popular Expansion Boards

PC TechVideo provides instruction not found in books or magazines. It is an essential tool for anyone interested in understanding their PC. You can't afford not to have PC TechVideo.

■ PC TUTOR

logged disk drive with the "L" command, the file list on WordStar's opening menu is not displayed and I can't call any files from the new drive. I've had to continue using DOS 2.1 with WordStar, but the arrangement is less than satisfactory. Is there a patch to WordStar to make it function properly under DOS 3.0?

George V. Ludwig
Madison, Wisconsin

It's not a WordStar problem—it's a DOS 3.0 bug. WordStar will work fine under DOS 3.1 or 3.2. I wish I could tell you about IBM's great update policy for replacing buggy DOS versions at minimal charge, but upgrading to a new DOS still means putting out the bucks for it.

EXITING ASSEMBLY LANGUAGE PROGRAMS

Can you briefly explain some of the differences between DOS interrupts and DOS function calls that do the same thing? I'm thinking mostly about interrupt 20h versus interrupt 21h function call 4Ch (which exits a program) and interrupt 27h versus interrupt 21h function call 31h (which exits a program and remains resident).

If I use one or the other, to what extent will I lose compatibility with older or newer DOS versions? Do the newer calls work more quickly or reliably?

Paul G. Wing
Des Plaines, Illinois

DOS provides several different ways to exit an assembly language program, and they are all pretty much the same.

Under all versions of DOS, the most common method is the INT 20h command. But you can also use

```
MOV AH, 0
INT 21h
```

The first 2 bytes of the Program Segment Prefix (PSP) that DOS builds at the beginning of all programs loaded into memory contain the machine code for an INT 20h (the bytes CD 20h). For a .COM program, DOS pushes a word of zeros on the stack before it turns control over to the program. Thus (assuming that the stack pointer is the same as it was on entry to the program) a .COM program can terminate with a simple RET instruction. This

■ Function calls 4Ch and 31h are now the "preferred" methods for exiting assembly language programs.

branches to the beginning of the PSP and executes the INT 20h instruction.

Using this fact, you can create the shortest possible .COM program (1 byte long) thus:

```
CSEG SEGMENT
      ASSUME CS:CSEG
      ORG 0100h
ENTRY: RET
CSEG ENDS
END ENTRY
```

You can also exit a .COM program by branching to the beginning of the Program Segment Prefix directly. If the beginning of your program looks like this:

```
CSEG SEGMENT
      ASSUME CS:CSEG
ZERO: ORG 0100h
```

you can exit it with either

```
JMP ZERO
```

or

```
CALL ZERO
```

Prior to DOS 2.0, interrupt 20h presented some problems for .EXE programs. Interrupt 20h requires the value of the CS (Code Segment) register to point to the beginning of the Program Segment Prefix. In the general case, this is not true for .EXE programs. On entry, however, the value of the DS (Data Segment) register points to the PSP. So, to use interrupt 20h, .EXE programs have to execute code that looks something like this:

```
PUSH DS
MOV AX, 0
PUSH AX
```

THE PERFECT PROMOTIONAL TOOL!

GREAT IBM PC SOFTWARE UNDER \$10!

POPULAR SOFTWARE—Our best-selling programs, just \$7.95 each—exclusively designed and fully guaranteed by Software Express/Direct.

SPECIAL OFFER: Buy any two selections for \$14.95, any three for just \$14.95, or four or more for just \$4.98 each and get even more value for your money!

SPREADSHEET MANAGER Superb value in a project management package! An excellent and complete GANTT and PERT project manager for the PC. Also features full charting capabilities. (E227078) \$9.95

FINANCIAL MANAGER Create reliable custom databases for your own applications. An excellent, full-featured database program for a price. (E227079) \$9.95

WORD MANAGER Create reliable custom databases for your own applications. An excellent, full-featured database program for a price. (E227079) \$9.95

3-3-3 PRINTER Delivers Printing of Spreadsheet Results! Stop cutting and taping your spreadsheet results. Includes amazing factor option to calculate monthly payments of various interest rates. Fast and easy printing of all tables. (E227077) \$9.95

PC-DOS FOLDER Save time! DOS Files Packed full of DOS utilities... includes file compression, RAMdisk, sub-directory search, backdoor, print spooler and selected copy features. Includes full documentation. (E227096) \$9.95

MANAGER MANAGER Save Plans! Run-time Use Your PC Great program for special events—prints continuous banner messages in seven-inch high letters on your PC printer. Includes typewriters for EPSON/IBM dot-matrix printers. (E227085) \$9.95

INVESTIGATOR Right Book! Financial Facts Includes the most commonly used investment calculations. Fast window design includes Future Value, Investment and Annuity Returns, Regular Deposits and loans, including fast printing. (E227087) \$9.95

WORDLETTER Quick Notes, Form, Envelopes! The fast, efficient way to get out one-shot correspondence on your PC... includes live buffer, top and margin settings. (E227088) \$9.95

MY BUSINESS Anti-Peak Personal Finance Help! Bold Adventure! Buster Cheaps reach the jewel-encrusted ends of the Top of Turf Pyramid. Fun, fast and very sneaky! (Color/Graphics req'd.) (E227089) \$9.95

WORDWISER Check a Good Copy! Check your Copy! Check! Check! Eight skill levels and hours of fun... nothing like it or three times the price! (Graphics req'd.) (E227090) \$9.95

SOLID SOFTWARE VALUES, PRICED FROM JUST 75¢ TO \$7.95... ALL NO-RISK GUARANTEED FROM SOFTWARE EXPRESS/DIRECT

JOIN THOUSANDS OF SATISFIED IBM (AND COMPATIBLE) PC OWNERS already getting more value for their software dollar with useful and affordable Software Express/Direct products.

THE SOFTWARE CHANNEL Incredible software values carefully selected, evaluated and documented by our editorial staff... all programs shipped on high-quality diskettes for instant use. Minimum order is \$10 if these are the only programs you buy from us—order as many more as you like. However, if you order at least one other POPULAR SOFTWARE package (if left), you may also order less than this \$10.00 minimum.

PROJECT MANAGER Superb value in a project management package! An excellent and complete GANTT and PERT project manager for the PC. Also features full charting capabilities. (E227078) \$9.95

FINANCIAL MANAGER Create reliable custom databases for your own applications. An excellent, full-featured database program for a price. (E227079) \$9.95

WORD MANAGER Create reliable custom databases for your own applications. An excellent, full-featured database program for a price. (E227079) \$9.95

BUSINESS MATH 44 useful business math and statistics functions. (E227096) \$9.95

TEMPLATE MANAGER Design cut-out command cards for your favorite programs. (E227095) \$9.95

WORD COPY MASTER Quickly find a word code for any location in the U.S. (E227091) \$9.95

LETTERS TO THE B Collection of 50 commonly used, ready-to-print business letters for your word processor. In text file form. (A227091) \$9.95

LETTERS TO THE B 850 ready-to-use business letters. (A227091) \$9.95

CALENDAR GENERATOR Generate calendars for any month and year. (E227096) \$9.95

MATH TUTOR A modern math teaching program for grades 1 to 6. (E226809) \$9.95

SPELL/TYPER TEACHER Excellent for young computerists. Teaches a young child how to spell and type on the keyboard. (E228045) \$9.95

POWER TYPER Improve your typing skills with this series of keyboard drills. (E228079) \$9.95

OUR GUARANTEE: Your complete satisfaction with all of our software products is our most important goal. If for any reason you are not satisfied with any program you purchase from Software Express/Direct, simply return it to us, along with the original packaging, within 30 days of purchase, and your purchase price and shipping costs will be promptly refunded.

■ PC TUTOR

This code puts the far address (segment plus offset) of the beginning of the PSP on the stack. The .EXE program can then exit with a

RET

within a far procedure. This effectively branches to the INT 20h instruction at the beginning of the PSP.

Beginning with DOS 2.0, interrupt 21h function call 4Ch was added. This function call has two advantages over interrupt 20h. First, it does not require that the CS register point to the PSP. Second, a program can pass back a return call (in register AL) to DOS. This return code can be used in a batch file IF ERRORLEVEL statement. Or, if the program is executed through function call 4Bh as a child process of another program, the parent program can retrieve the return code through function call 4Dh.

Aside from these advantages over interrupt 20h, however, the two termination methods are functionally about the same. I've just taken a look in DOS 3.2 and have found that DOS turns an interrupt 20h into an interrupt 21h function call 0. Function calls 0 and 4Ch both execute a few lines of code on their own but then share the bulk of the DOS code involved in terminating programs.

The story is similar for interrupt 27h. By setting register DX to the end of the program and executing an INT 27h, a program can terminate but remain resident. This works for all DOS versions. Interrupt 27h is a problem with .EXE programs because CS must again point to the beginning of the PSP. I've seen at least one .EXE program that remained resident by putting a 27h in the second byte of the PSP and then terminated with a far RET.

Beginning with DOS 2.0, interrupt 21h function call 31h can also be used to terminate and remain resident. Here register DX is the size of the program in paragraphs. (A paragraph is 16 bytes.) By using a paragraph size rather than a byte size, function call 31h allows a program larger than 64K to remain resident in memory. Like function call 4Ch, you can also pass back a return code with function call 31h. But again, interrupt 27h and function call 31h share a lot of DOS code.

Function calls 4Ch and 31h are now the

■ Some people believe that interrupts 20h and 27h will be eliminated in future versions of DOS.

"preferred" methods for exiting assembly language programs, but only because they are more flexible than interrupts 20h and 27h. The only problem with these methods is that these two function calls don't work under DOS 1.1. Although DOS 1.1 is nearly extinct, if the rest of your program can run under DOS 1.1, it would be silly to terminate with a function call not supported by DOS 1.1.

Some people believe that interrupts 20h and 27h will be eliminated in future versions of DOS. For instance, the Microsoft Press MS-DOS Technical Reference Encyclopedia (which was recalled about a month after it was released because of gross errors) describes interrupts 20h and 27h as "obsolete." It also says that programs that remain resident in memory should use function call 31h to "ensure compatibility with future versions of DOS." (Really? Is that all that's necessary to be compatible with future DOS versions? Isn't that what "ensure" means?)

Believe me, if a future DOS version must eliminate interrupts 20h and 27h, this will be the least troublesome of the changes you'll have to make to your assembly language programs. I'm working under the assumption that the future 80286 protected-mode version of DOS (which is really the only future DOS version that matters) will require you to make changes in all assembly language programs, and that your programs written in high-level languages may only have to be recompiled and relinked.

The Fastest IBM Compatible Computers At The Lowest Prices

MICRO EXPRESS PRESENTS

\$1049⁰⁰

\$499⁰⁰

The ME 286

The ME 286 is the best. Micro Express uses Atrionics (U.S. made) top-of-the-line mother boards for the ME 286. These units are burned in at the factory for at least 24 hours. The ME 286 has three different versions with 8, 10 and 12MHz processors. The ME 286 includes 640K (1MB option), 8MHz clock, 1.2MB floppy disk drive, floppy and hard disk controller, 200W power supply, and AT style keyboard.

The ME V20

This 8088 based machine with a Norton Rating of 3.3 is the fastest XT compatible on the market. If you need speed, but don't have the budget for the 286 unit, the ME V20 is the ideal, low cost, high performance computer. The ME V20 runs at 4.77/8MHz switchable clock using a NEC V20 processor for maximum speed and still full compatibility. The ME V20 includes: 640K, 360K floppy disk drive, floppy disk controller, and AT style keyboard.

CUT DEBUGGING FRUSTRATION

T-DebugPLUS, a new run time symbolic debugger
for Turbo Pascal, allows programmers to

- examine and change variables,
- trace and set breakpoints,
- view source code while debugging

 It cuts debugging frustration and enables pro-
grammers to find and fix bugs faster and easier
than ever before.

T-DebugPLUS is only \$60, and is complete with
source code, reference card, and an 80 page
printed manual. It requires Turbo Pascal 3.0 and
256K memory IBM compatible. Charge card or-
ders toll-free at 800-538-8157 x630, 800-672-
3470 ext. 830 in CA. See ads in Byte or PCtech
or call 408-438-8608 for more info.

MEMORY RESIDENCY MADE EASY

Crackerjack Microsoftware Corporation is proud to introduce "JACK™", the Resident Program Developer's Kit. JACK contains everything you need to create your own RAM resident software without any of the headaches of memory management, windows, or DOS re-entrancy.

With JACK at your side, creating programs as good as, SIDEKICK™, couldn't be easier!!! Now you can concentrate on how your program should run, instead of worrying about how to make it memory resident.

JACK FEATURES:

- Virtually any EXISTING C or ASSEMBLER program can be made memory resident with no need for modification to the code. (PASCAL will be supported in the near future).
- Automatic screen save on popping up and restore upon popping down.
- Your choice of Hotkey and interrupt vector for program use.
- You can use DOS function calls in your memory resident program.
- All programs developed with JACK will coexist with each other peacefully. No more system crashes and lost data.
- JACK applications can be loaded in any order and popped-up in any order. Less support problems for you and no headaches for the end user.
- Your program will keep if it is not possible for you to pop up at the time desired.
- Since JACK does not make any use of undocumented DOS calls, programs developed with it will not become obsolete when Microsoft releases a new version of DOS. JACK requires DOS Version 2.0 or higher.

Finally, a standard for easily creating memory resident programs has arrived!

To Order, send \$199.95 (US) by
certified check or international money
order to:

Crackerjack Microsoftware Corporation,
200 Bay Street, P.O. Box 86, Toronto,
Ontario M5J 2J2 Canada.
(416) 865-9621.

Please specify your choice of the C or
assembler version of JACK and indicate
the vendor and version of your
compiler. Ontario residents add 7%
Ontario Sales Tax.

JACK and SCREEN.G are registered trademarks of Crackerjack Microsoftware Corporation. SIDEKICK and Turbo Pascal are registered trademarks of Borland International, Inc. DOS is a registered trademark of Microsoft Corporation.

EVERLOCK COPY PROTECTION

Attention Software Developers, Are you tired of Copy Protection that...
-is NOT transparent to the user
-does not allow backups
-requires I/O plugs or special media
-doesn't support hard or cartridge disks
-makes you pay for every disk protected
-requires source code changes
-can be beaten by hardware copy boards
If so, EVERLOCK can solve these problems for only \$495. Free info & demo disk available.

CIRCLE 57 ON READER SERVICE CARD

FOR DOS PARTITIONS UP TO A GIGABYTE

You can put your entire hard disk, or two, in one bootable partition, or you can create up to twenty-three partitions which DOS sees as separate drives.

Vfeature Deluxe lets you use the big drives you thought your system couldn't support. You aren't bound by the AT Drive Types or by the XT 10-megabyte limit—you can use any physically-compatible drive, without hardware modifications.

Vfeature Deluxe is smart software. It runs under DOS with AT, XT, and compatible hard disk controllers, including RLL, ESDI, and SCSI controllers. It comes with everything you need to install it—a physical formatter with bad track mapping, a high-level format, a thorough manual, good Tech Support when you need it—and extras, like cluster size control for each partition (but you thought that was another DOS limit), and passwords to lock your keyboard, your disk, and your system.

See your dealer or call us for information about this and other smart software.

PC MAGAZINE MARKETPLACE

the ultimate target market!

The brand specifiers who read PC Magazine don't have the time to shop around, their only concern is getting what they need as quickly as possible.

They'll DIRECT
their attention to
PC Magazine Marketplace

For them PC Magazine Marketplace's Direct-Response/Display Ad format represents a fast, easy and cost effective method of product acquisition. They know it will have the products they need and the information they want regarding price, volume discounts, specifications and delivery.

If you think that your business can benefit from the 320,000 brand specifiers who read PC Magazine . . . YOU'RE RIGHT!

So take DIRECT action
and call (212) 503-5115

Personally Superior!

When you weed through the "compatible jungle," you will discover that *Price* and *Quality* will lead you to PC Technologies

PC Technologies PCT-AT 1.0

- 6/8 Mhz CPU
- 512k Memory
- 1.2MB Floppy
- AT Controller
- 200 Watt P/S

FREE INFORMATION

About Products & Services

In this Issue! Here's your chance to have all the facts, figures, and specifications about the products or services advertised or mentioned in this issue of PC Magazine. Absolutely free of charge!

Just complete the attached card. We'll notify the manufacturers or distributors so you can receive your free brochures directly from them.

It's as easy as 1, 2, 3
to have valuable information about
dozens of products right at your
fingertips:

1 Fill in your name and address and check off your answers to the three research questions. (One card per person, please.)

2 Circle the numbers on the card that correspond to the reader service numbers which follow the ads or articles you'd like more information about. (Numbers for advertised products are repeated in the Advertiser Index as well.)

3 Mail the card today...it's postage paid. The literature will be mailed free of charge to your attention.

- 1) For which of the following products are you involved in selecting brands/models to be bought by your company or organization? (check all that apply)

- h. Hard Disk/Tape Back-up
i. LANs Boards
j. LANs
k. Micro-Mainframe Links
Software
l. Communications
m. Accounting
n. Spreadsheets/
Financial
Hardware
a. Mainframe
b. Mini
c. PC
d. Printers/
Plotters
e. Monitors
f. Terminals
g. Modems

- 2) Your primary job function is (check)
a. Administrative/General Management
b. MIS/DP/Communications Systems
c. Programming
d. Engineering/R&D
e. Finance/Accounting
f. Marketing/Sales
3) Next step after information is received:
x. Purchase Order
y. Evaluation
z. Specification/
Recommendation

- PLEASE PRINT CLEARLY—use only one card per person
Name _____ Phone No. (____) _____
Company _____ Title _____
Address _____ Apt. _____
City _____ State _____ Zip _____
(Do not mail to be included to insure delivery)

Please send me one year (22 issues) of PC Magazine for \$24.87 and bill me. (Full one-year subscription price \$34.87.) Offer valid in U.S. and possessions only.

Are you frequently called upon to give advice about PC products? Is it your responsibility to make PC hardware, software and peripherals selections?

If so, there are probably products or services in this issue you wish you knew a little more about.

Well, all you have to do is send in your PC Magazine reader service card. You just circle the num-

ber that corresponds to the ad or article that interested you. We'll forward your name to the manufacturers or distributors so they can send you the literature you need.

Don't waste a minute. The sooner you fill out your card and send it in, the sooner you can start building your product reference file!

The Key Tronic KB 3270/PC Keyboard... The Final Step in Your Micro-to-Mainframe Connection.

Now that you've made a major investment by allowing your micro computers to access your mainframe, take the final step by adding a Key Tronic KB 3270/PC Keyboard.

Plug compatible with the IBM® PC, XT and AT, the KB 3270/PC was developed to work in conjunction with micro-to-mainframe emulation packages from vendors such as DCA (IRMA™), CXI, FORTE® and ATTACHMATE.

By providing 122 keys including 24 function keys, the keyboard allows for easy and efficient operation resulting in more operator productivity.

It's another input solution from Key Tronic, the world's largest independent manufacturer of full

travel keyboards, and a supplier of a full line of integrated input devices.

For more information about the KB 3270/PC, see your Key Tronic dealer . . . or call us toll-free at **1-800-262-6006**, (7:00 a.m. to 3:00 p.m. Pacific Time)

*IBM, XT and AT are registered trademarks of IBM Corporation

*IRMA is a registered trademark of Digital Communications Associates Inc.

19,200 bps.

Microcom puts its cards on the table. Announcing the PC/9624c card modem. The world's fastest internal modem for your IBM™ PC or compatible personal computer. And two other card modems that are the fastest in their class. The PC/2400c and PC/2400.

The new PC series is the only modem card family that delivers speeds up to 19,200 bps. 100% error free.

But don't make the mistake of thinking the world's fastest and most accurate modems exact a heavy toll on your monthly phone bill. Exactly the opposite is true.

YOU GET WHAT YOU PAY FOR.

Comparative costs of sending 360,000 bytes of data over dial-up phone lines

Product	Throughput	Transfer Time	Cost of call (\$20/hr)
Generic Modem	2400 bps	25 min.	\$8.33
PC/2400	2900 bps	20 min., 41 sec.	\$6.90
PC/2400c	5000 bps	12 min.	\$4.00
PC/9624c	9600 bps	6 min., 15 sec.	\$2.08
PC/9624c	19,200 bps	3 min., 7 sec.	\$1.04

Modem Card.

Our new PC card modems give you everything you expect from a Microcom modem. Microcom is the leader in dial-up error-correction technology and the inventor of MNP™ – Microcom Networking Protocol™ – the recognized industry standard.

The new PC card modems from Microcom. Call us for the inside story. 1-800-822-8224 (In MA dial 617-762-9310).

- Hayes™ compatible
- CCITT V.22 bis compatible
- Upgradable
- Standalone configurations available

IT'S ALL IN THE CARDS. Send for complete details on the PC/9624c, PC/2400c and PC/2400. Mail to Microcom, 1400 Providence Highway, Norwood, MA 02062.

COMING UP

COMPLETE LAPTOP ROUNDUP

Everyone wants to take DOS on the road, and the advantages of doing so are many, especially when the portable PC in your lap is lightweight and its screen is legible. Since last July, when *PC Magazine* surveyed the portable computer scene, a flurry of new arrivals and improvements have made your buying decisions more complicated than ever. In this complete roundup, Jon Pepper and our own editorial staff take a close look at eight new laptops, and capsule reviews from the first laptop survey remind you of reviewers' reactions to the earlier collection. Also included: an updated features table covering all the laptops and a look at regulations governing use of portable computers in airplanes.

MULTIPOINT SERIAL CARDS Here's an idea whose time has come: cards that provide your PC with four to eight extra serial ports. Winn L. Rosch reviews five multipoint serial cards of both the "intelligent" and "dumb" types and explains the advantages in flexibility that custom-designed operating software can offer.

BUSINESS GRAPHICS It's a struggle to keep up with the latest advances in graphics packages, but in today's PC-dominated offices, it's a must. Marvin Bryan tests five top-of-the-line programs for ease of use and plotter output. The colorful results may surprise you.

PRESENTATION PACKAGES If you're looking for an easier way to create an effective tutorial, an eye-catching marketing demo, or a high-impact presentation for the board of directors, one of these five presentation packages may be just what you need. Slide shows will never be the same again.

HIGH-RESOLUTION MONITORS Wyse and Monitem go head-to-head in a test of high-resolution monitors running *Microsoft Windows*.

3M

diskettes

Everything that goes into a 3M diskette is manufactured and/or controlled by specifications set by 3M.

From unique substrates and oxides, to hole punching and jacket fabrication, 3M does it all and does it well. With confidence in your complete satisfaction, 3M diskettes are certified to be error free and have an unlimited warranty against defects in workmanship or materials. Day in and day out 3M gives you one less thing to worry about.

What separates us from our competition? Simply a combination of the best service in the industry, highly competitive pricing, and an ever widening range of products. Above all we care about our reputation and we are willing to work on a lower margin while delivering what others only claim—and we do it all on a day-in day-out basis.

Every subscriber to *PC Magazine* will receive our New 96-Page Winter Spring 1986/87 Catalog over the next few months. We hope to be your source for computer supplies & accessories. Now with 15 pages of consumer/industrial products.

Still Searching?

MAC Version
now available

What does the Bible say? And where?

We offer an integrated family of software products that allow you to search the Bible as never before.

With "THE WORD Processor" software (which includes the complete text of the KJV or NIV Bible) you can create indexes on key words, phrases, even concepts, as well as search, display or print, for just \$199.95. Greek and Hebrew Transliterator products which include Strong's Concordance are also available. Or choose from a host of other exciting Biblical software products available in varying price ranges.

So if you're still searching, give us a call. We're anxious to show you how your PC can help you access your Bible as never before.

BIBLE RESEARCH SYSTEMS

2013 Wells Branch Parkway, Suite 304
Austin, Texas 78728 (512) 251-7541

Include \$3.00 for postage and handling. For Apple, IBM PC, Commodore 64, TRS-80, Macintosh, CPM 2.2, MS-DOS.

The Most Powerful Business Software Ever Has Just Become Even More Powerful!

FOR YOUR IBM PC XT/AT, TANDY, COMPAQ, ASET OR OTHER IBM COMPATIBLE COMPUTER.

OVER
100,000 SOLD

The VERSABUSINESS™ Series

Each VersaBusiness module can be purchased and used independently, or can be linked in any combination to form a complete, coordinated business system.

VERSALEDGER™ \$149.95
A complete accounting system that grows as your business grows. VERSALEDGER™ can be used as a complete, personal checkbook register, expanded to a small business bookkeeping system or developed into a large corporate general ledger system without any additional software.

VERSAACCOUNTS™ \$99.95
A complete menu-driven accounts receivable, invoicing and monthly statement generating system that keeps track of all information related to who owes you or your company money.

VERSAACCOUNTS PAYABLE™ \$99.95
Is designed to keep track of all current and aged payables, sending you at a touch with all information related to how much money your company owes and how to manage your cash flow.

VERSAAPPAYROLL™ \$99.95
Is the most powerful fully automated payroll system

available yet easy to use. Keeps track of an government-required payroll information, instantly calculates payroll deductions in every state and prints checks and payroll forms.

VERSAINVENTORY™ \$99.95
Is an instant access inventory program that gives you virtually unlimited storage capacity and the comprehensive statistics required to make all of your vital inventory decisions.

REVIEWS: Distribution of the VersaSeries has now exceeded 100,000 making the VersaSeries the largest mass distributed accounting software package in the world. Among recent reviews, the VersaSeries received an excellent rating in the new ADD-Software rating encyclopedia. The VersaSeries actually outperformed competitive packages selling at three to five times the price.

Professional Time and Billing System

INSTANT BUSINESS™

For ATTORNEYS, ACCOUNTANTS, ARCHITECTS, CONSULTANTS, DOCTORS and Anyone Who Bills for Time or Service

Dramatic Breakthrough for Any Professional who Bills for Time or Service. This New User-Driven Package Will Outperform Your Present Time and Billing System.

Save Time and Money Your INSTANT BUSINESS™ Professional Time and Billing System makes your current billing and Management Cheats.

- Automates your billing
- Bills by time or service
- Accesses rates of both volume and non-volume time
- May be used by an individual or by a multi employee professional practice
- Offers a commitment-free contract for both both residential and business billings/management
- Adds the built in Accounts Receivable module to keep track of all money due
- Employs the optional basic information pertaining to each of your employees
- Includes a complete record of all payments and adjustments

- Includes flexible reports, statements and reports
- Also supports up to 999 service codes
- You may bill your clients either by the hour or by the service rendered making the system an excellent package for any professional who must bill for time or specific services.
- Requires 7 floppy disk drives or a hard disk drive system. Clearly it is only needed by this drive set.

\$295.
 Your money back if, for any reason, you are not completely satisfied.

PROPERTY MANAGEMENT SYSTEM

THIS EASY TO USE PROPERTY MANAGEMENT AND ACCOUNTING SYSTEM is ideal for anyone who needs to keep track of normal routine and expenses.

This system performs all bookkeeping activities associated with owning:

EASY TO UNDERSTAND
 THE INSTANT BUSINESS™ PROPERTY MANAGEMENT SYSTEM is designed to save time and money. The comprehensive user's manual guides you by step instructions with detailed reproductions of screen displays and sample reports. The on-line help mechanism and tips to follow make it so quickly eliminate the need to learn as the manual.

SAVE TIME AND MONEY
 This system is designed to save time and money. The system of INSTANT BUSINESS™ PROPERTY MANAGEMENT is to automate your billings and management of jobs in an efficient and economical way. The system is flexible so that you can easily expand any more options that may be your needs.

Save time and money by adding COMPREHENSIVE STATEMENTS and COLLECTIONS NOTICES. Your timely, accurate and professional statements and collection notices will speed up collection times and improve your bottom line enough to take customer service.

INSTANT SYSTEMS QUERIES
 At the touch of a button, see the current status of any property, rental and/or inventory. Automatic bill displays the trending of rents such as delinquent, rental complaints, etc.

COMPLETE TRANSACTION BOOKKEEPING
 Record complete work bookkeeping for production and/or services provided. Detailed print outs, receipts, inventories, etc. make sure the Accounts Payable system maintains monthly reports for daily entries and completes correct year-end statements and year-end wage work.

single or large apartment buildings, commercial office buildings, warehouses, retail stores, single family homes, in-tips or condominiums, recreational vehicles, personal property, etc.

single or large apartment buildings, commercial office buildings, warehouses, retail stores, single family homes, in-tips or condominiums, recreational vehicles, personal property, etc.

CHECK REGISTER ACCOUNTING SYSTEM
 Print out and keep ongoing information related to any checks that may be written. Includes accounts allow for customization of your system. The Check Register Accounts Payable SYSTEM also keeps track of all cash disbursements.

Our
MasterPiece.
has it all
together...

and our
MasterPiece.
Remote has
it all apart.

Hideaway Outlet Strip conserves desk space.

When we designed our Master Piece, we put all the most popular PC accessories together in one elegant unit. We gave it five outlets, a master switch, two-stage surge suppression, noise filtering, static protection and a monitor swivel – everything you need to organize and protect your PC.

Then, as a variation on a theme, we designed another unit especially for modem users. We gave it all the features (and the same good looks) of the Master Piece, *plus* modem/telephone line surge suppression. Its name? Master Piece Plus.

Next, we thought of taking apart everything we'd put together. The result – Master Piece Remote. It has all the features of the Master Piece Plus in two separate parts, for PC users who are short on space. Its Outlet Strip hides behind your desk, while its Remote Control keeps your switches in easy reach.

Master Piece \$149.95, Master Piece Plus \$179.95, and Master Piece Remote \$199.95 – three great ways to organize and protect your system. For a dealer near you, or for a free brochure, call Kensington at (800) 535-4242. In New York, call (212) 475-5200.

KENSINGTON 

Master Piece and Master Piece Plus are UL Listed and CSA Approved. Master Piece Remote approval applied for All Master Piece units meet IEEE 587-1980 Category A & B.

EMERALD SP-2

Switched, plugs into duplex outlet, 6 ft. power cord, Built-in Circuit Breaker, 6 Outlets, 15 Amps Total 125 Volts, 1575 Watts From Single or All Combined + Operating Temperature: -40°C to + 85°C + Peak Pulse Power Dissipation @ 25°C, 585,000W for 20 Micro Sec.
 + Maximum Clamping Voltage @ Test Current 50A @ 20 Micro Sec.
 + 340V Clamping Occurs Line to Line (Normal Mode) and Line to Ground (Common Mode)
 + Clamping Response Time 1 Nanosecond (t_r @ 50-9 sec.) + Dielectric Test: 3000 VAC 60 Sec. + Forward Surge Rating @ 25°C, 1440 Amps for 1/160 Sec., Lifetime Warranty

Retail \$59.95

All Curtis Surge Protectors meet or exceed IEEE Standards 287-1990 Guide for Surge Voltages in AC Power Circuits.

SAPPHIRE SPF-1

Switched, EMF-81 Filtered, adapts to duplex outlet, 3 Outlets, 15 Amps Total 125 Volts, 1025 Watts From Single or All Combined + Operating Temperature: -40°C to + 85°C Peak Pulse Power Dissipation @ 25°C, 585,000W for 20 Micro Sec.
 + Maximum Clamping Voltage @ Test Current 50A @ 20 Micro Sec.
 + 340V Clamping Occurs Line to Line (Normal Mode) and Line to Ground (Common Mode)
 + Clamping Response Time 1 Nanosecond (t_r @ 50-9 sec.) + Dielectric Test: 3000 VAC 60 Sec. + Forward Surge Rating @ 25°C, 1440 Amps for 1/160 Sec.
 + Mode Noise Protection, Normal and Common Mode + Noise Resection Frequency: 1500HZ - 30MHz + Attenuation: 50B-50dB, Lifetime Warranty

Retail \$79.95

The Ones To Ask For

Curtis Electronic Surge Protectors are built to provide surge protection for any microcomputer for a lifetime. Constructed with precision, using advanced semiconductor technology, the Curtis Jewels prevent damage to microcomputer systems and data from powerline overvoltage.

"surges, spikes and glitches." Surge protection from the Curtis Jewels is your guarantee of the best line or defense for your valuable hardware and data, at a price that won't shock you. Get your computer the protection it deserves with Curtis — the experts in accessories.

Curtis products are available nationally from leading Dealers, Distributors, and Retail Chains. In Canada: Micro-Computer Products, P.O. Box 235, Ajax, ONT, Canada L1S 3C3, (416) 427-6612
